0761362 Managing Assets, Class Test 2

They can also be tolerated and terminated.

NEW QUESTION # 87
The legal principle of assurable interest means which of the following statements are TRUE? Select TWO.

- A. It is not possible to insure your supplier's factory.
- B. It is possible to insure someone else's factory.
- C. It is not possible to insure someone else's factory.
- D. It is possible to insure your supplier's factory.

Answer: C,D

Explanation:
Explanation
Insurable interest means that it is not possible to insure someone else's factory. The only guide explains that you can only take out insurance when you have at least partial ownership of that risk. Therefore option D is also correct as you have a partial risk if something were to happen to your supplier's factory. You can take out C&D insurance for this. See § 100(2) for further explanation of legal principles of insurance.

NEW QUESTION # 88
In an organization, who is responsible for creating a risk assessment register?

- A. Cross Functional Team
- B. The CEO
- C. Risk Manager / HSE Manager
- D. Procurement Manager

Answer: A

Explanation:
Explanation
A Cross Functional Team should create a risk register. It shouldn't be the responsibility of one person to do this. More points of view will lead to more risks being identified. Accountability for the Risk Register may however sit with the CEO or a Department Manager. This is explained in § 112.

NEW QUESTION # 89
In recent years, many people are interested in CIPS certification exam. So, CIPS LSMD test also gets more and more importance. As the top rated exam in IT industry, LSMD certification is one of the most important exams. With LSMD certificate, you can get more benefits. If you want to attend the exam, Preparing CIPS LSMD questions and answers can offer you convenience. The steps are indispensable and the best.

Exam C_S43_2601 Exam Questions, C_S43_2601 Interactive Testing Engine

Lead2Passed alerts you that the syllabus of the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) certification exam changes from time to time. Therefore, keep checking the fresh updates released by the SAP. It will save you from the unnecessary mental hassle of wasting your valuable money and time. Lead2Passed announces another remarkable feature to its users by giving them the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) dumps updates until 1 year after purchasing the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43_2601) certification exam pdf questions.

In order to make all customers feel comfortable, our company will promise that we will offer the perfect and considerate service for all customers. If you buy the C_S43_2601 training files from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the C_S43_2601 learning dumps, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our C_S43_2601 study questions well. We believe our perfect service will make you feel comfortable when you are preparing for your exam.

Free PDF Interactive C_S43_2601 Testing Engine & The Best Methods to help you pass SAP C_S43_2601

In order to make you have a deeper understanding of what you are going to buy, we offer you free demo for C_S43_2601 training materials. We recommend you have a try before buying. If you are quite content with the C_S43_2601 training materials, just add them into your cart and pay for them. You will get the downloading link and password and you can start your learning right now. In addition, we have online and offline chat service staff who possess the professional knowledge of the C_S43_2601 Exam Dumps, if you have any questions, just contact us.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Maintenance Order with Checklist
- * Display a Maintenance Order with automatically generated Object List and Checklist.
- * Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

- * Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- * Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
- * Initial Screen :
- * Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
- * Press Enter .
- * Enter Header and Location Data :
- * Functional Location : Enter 48-01-PRD-01-03-HD .
- * Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
- * Assign the Task List :
- * Go to the Operations tab or find the task list assignment section.
- * General Maintenance Task List : Enter A / T-PMCLEN / 1 .
- * Press Enter to validate.
- * Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- * Display the Order : Use transaction code IW33 and enter the order number you just created.
- * Verify the Object List :
- * Navigate to the Object List tab.
- * You should see the equipment or functional location listed here with a link to the checklist.
- * Verify the Checklist :
- * Look for a button or tab labeled Checklists or Inspection Lot within the order.
- * The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 11

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- * Display the automatically created Inspection Lot
- * Record Inspection Results
- * Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

- * Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- * Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- * Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- * Verify the Following Data :
- * Material : T-PM1100
- * Plant : 1010
- * Inspection Lot Origin : 89 (Miscellaneous)
- * Group : CL-DE-00
- * Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- * Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- * Select the Lot : Enter your inspection lot number and click Execute .
- * Record Results :
- * Enter the inspection values for each characteristic listed in the checklist.
- * Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- * Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- * Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 12

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 13

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed

beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

□

NEW QUESTION # 14

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Create a Maintenance Work Center
- * Create a capacity demand for a Maintenance Work Center
- * Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
 - * Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- * create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- * maintain the required capacity values
- * create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Description = Mechanical Maintenance 42
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- * Go to SAP GUI command field
- * Enter transaction IR01
- * Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Work Center Category = 0005
- * In Copy from :
- * Plant = 1010
- * Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- * select Capacities
- * continue with the green check

This was important because the task required changing capacity-related data:

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□

Step 4: Maintain basic data

On the work center master screen:

- * change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- * No. Ind. Capacities = 5
- * Capacity Base Unit = H
- * Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- * Start Time = 08:00:00
- * End Time = 17:00:00
- * Length of breaks = 01:00:00
- * Capacity Utilization = 60
- * No. Ind. Capacities = 5

This produced:

- * Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- * Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- * "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- * create a capacity demand of 1 hour
- * for the newly created maintenance work center ZZ-ME42
- * by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- * In the command field, enter /nIW31
- * Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

- * Order Type = PM01
- * Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

- * Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- * Operation = 0010
- * Work Center = ZZ-ME42
- * Plant = 1010
- * Control Key = PM01
- * Work Duration / Work = 1
- * Unit = H

Then press Enter.

This operation is the actual source of the capacity demand.

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour.

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

- * Click Save

SAP displayed the confirmation message:

* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

* Maintenance Work Center created

* Work Center = ZZ-ME42

* Plant = 1010

* confirmed by SAP message that the work center already existed when rechecked

* Capacity maintained correctly

* No. Ind. Capacities = 5

* Capacity = 24.00 H

* Capacity demand created

* maintenance order type PM01

* operation assigned to ZZ-ME42

* planned work = 1 H

* Order successfully saved

* SAP confirmation: Order saved with number 4000314

NEW QUESTION # 15

.....

With our top quality C_S43_2601 exam preparation materials, you will get SAP certification and avail the excellent job opportunities available at the top ranking IT companies. Now you can easily pass C_S43_2601 Practice Test with the help of our valid learning materials and you will get a promotion in your company and work in a respectful and comfortable environment.
