High Hit-Rate HashiCorp - Valid Terraform-Associate-003 Vce

Different from the common question bank on the market, Terraform-Associate-003 exam guide is a scientific and efficient learning system that is recognized by many industry experts. In normal times, you may take months or even a year to review a professional exam, but with Terraform-Associate-003 exam guide you only need to spend 20-30 hours to review before the exam. And with Terraform-Associate-003 learning question, you will no longer need any other review materials, because our study materials already contain all the important test sites. At the same time, Terraform-Associate-003 test prep helps you to master the knowledge in the course of the practice.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q136-Q141):

NEW QUESTION # 136

When using Terraform to deploy resources into Azure, which scenarios are true regarding state files? (Choose two.)

- A. Changing resources via the Azure Cloud Console records the change in the current state file
- B. Changing resources via the Azure Cloud Console does not update current state file
- C. When you change a Terraform-managed resource via the Azure Cloud Console, Terraform updates the state file to reflect the change during the next plan or apply
- D. When you change a resource via the Azure Cloud Console, Terraform records the changes in a new state file

Answer: B,C

Explanation:

Terraform state is a representation of the infrastructure that Terraform manages. Terraform uses state to track the current status of the resources it creates and to plan future changes. However, Terraform state is not aware of any changes made to the resources outside of Terraform, such as through the Azure Cloud Console, the Azure CLI, or the Azure API. Therefore, changing resources via the Azure Cloud Console does not update the current state file, and it may cause inconsistencies or conflicts with Terraform's desired configuration. To avoid this, it is recommended to manage resources exclusively through Terraform or to use the terraform import command to bring existing resources under Terraform's control.

When you change a Terraform-managed resource via the Azure Cloud Console, Terraform does not immediately update the state file to reflect the change. However, the next time you run terraform plan or terraform apply, Terraform will compare the state file with the actual state of the resources in Azure and detect any drifts or differences. Terraform will then update the state file to match the current state of the resources and show you the proposed changes in the execution plan. Depending on the configuration and the change, Terraform may try to undo the change, modify the resource further, or recreate the resource entirely. To avoid unexpected or destructive changes, it is recommended to review the execution plan carefully before applying it or to use the terraform refresh command to update the state file without applying any changes.

NEW QUESTION # 137

Which of the following is not a valid Terraform variable type?

- A. list
- **B. array**
- C. map
- D. string

Answer: B

Explanation:

This is not a valid Terraform variable type. The other options are valid variable types that can store different kinds of values.

NEW QUESTION # 138

Terraform configuration can only import modules from the public registry.

- A. True
- **B. False**

Answer: B

Explanation:

Terraform configuration can import modules from various sources, not only from the public registry. Modules can be sourced from local file paths, Git repositories, HTTP URLs, Mercurial repositories, S3 buckets, and GCS buckets. Terraform supports a number of common conventions and syntaxes for specifying module sources, as documented in the [Module Sources] page. References = [Module Sources]

NEW QUESTION # 139

What task does the terraform import command perform?

- A. Imports all infrastructure from the configured cloud provider.
- **B. Imports existing resources into Terraform's state file.**
- C. Imports resources from one Terraform state file to another.
- D. Imports a new Terraform module into Terraform's state file.
- E. Imports provider configuration from one state file to another.

Answer: B

Explanation:

Detailed Explanation:

* Rationale for Correct Answer (B): terraform import allows Terraform to associate existing resources (created outside of Terraform or by another tool) with a Terraform configuration by writing them into the state file. After import, Terraform can manage those

resources.

* Analysis of Incorrect Options:

* A. From one state file to another: Incorrect, import does not transfer between state files.

* C. Importing a module: Incorrect, modules are defined in configuration, not imported.

* D. Import all infrastructure: Incorrect, import is per-resource, not bulk.

* E. Provider configuration transfer: Incorrect, provider configs are in .tf files, not imported with this command.

* Key Concept: The terraform import command bridges existing resources with Terraform state management.

Reference: Terraform Exam Objective - Implement and Maintain State.

NEW QUESTION # 140

You have used Terraform to create an ephemeral development environment in the cloud and are now ready to destroy all the Infrastructure described by your Terraform configuration. To be safe, you would like to first see all the infrastructure that Terraform will delete.

Which command should you use to show all of the resources that will be deleted? Choose two correct answers.

- A. Run `terraform plan .destroy`
- B. Run `terraform destroy` and it will first output all the resource that will be deleted before prompting for approval
- C. Run `terraform state rm'`
- D. Run `terraform show :destroy`

Answer: A,B

Explanation:

To see all the resources that Terraform will delete, you can use either of these two commands:

`terraform destroy` will show the plan of destruction and ask for your confirmation before proceeding. You can cancel the command if you do not want to destroy the resources.

`terraform plan -destroy` will show the plan of destruction without asking for confirmation. You can use this command to review the changes before running `terraform destroy`.
