PMI PMI-ACP Practice Exam Fee | Latest PMI-ACP Dumps Ppt

Our PMI-ACP exam questions have always been the authority of the area, known among the exam candidates for their high quality and accuracy. According to data collected by our workers who questioned former exam candidates, the passing rate of our PMI-ACP training engine is between 98 to 100 percent! It is nearly perfect. So it is undeniable that our PMI-ACP practice materials are useful and effective.

PMI-ACP certification exam is a computer-based test that consists of 120 multiple-choice questions. The test is timed for three hours, and individuals are required to score a minimum of 65% to pass the exam. PMI-ACP Exam is designed to test individuals' knowledge and understanding of Agile principles and practices, as well as their ability to apply Agile methodologies in real-world situations.

PMI Agile Certified Practitioner Sample Questions (Q57-Q62):

NEW QUESTION # 57

A customer has given a project team several requests for new features on a product. The customer is upset that the requests have been placed in the backlog and are not currently being worked on by the team. What should the team do next?

- A. Prioritize the requests for the next sprint.
- **B. Turn the requests into user stories and prioritize them.**
- C. Review the feature requests and reject the most complex ones.
- D. Organize the feature requests from simple to complex.

Answer: B

Explanation:

The correct answer is D - Turn the requests into user stories and prioritize them. In agile, all feature requests must be expressed in the form of user stories and added to the product backlog. Once added, they are prioritized collaboratively with the product owner and stakeholders, usually based on value, risk, and effort.

From PMI Agile Practice Guide:

"Product backlog refinement includes breaking down large items into user stories, reprioritizing items, and ensuring they are properly understood by the team. This activity is critical in ensuring the right items are worked on at the right time." (PMI Agile Practice Guide, Section 5.2 - Product Backlog Refinement) From Mike Griffiths' PMI-ACP Exam Prep Book:

"Agile teams transform customer needs into user stories during backlog grooming. These are then prioritized by the product owner to ensure maximum value is delivered early." (Mike Griffiths, Chapter 3 - Value-Driven Delivery) Option A ignores customer needs. Option B (ordering by complexity) does not consider value. Option C skips the important step of converting feature requests into properly structured backlog items.

NEW QUESTION # 58

An agile team is having a meeting with a customer to formulate the product requirements for the next iteration. The outcome of the meeting is a set of clear and detailed requirements. What should the team do next?

- **A. Write tests that will be used to know when a story has been correctly developed.**
- B. Start coding on the selected user stories to meet the requirements.
- C. Run automated tests on the legacy functionality.
- D. Ask the customer to write tests that will be used to know when a story has been correctly developed.

Answer: A

Explanation:

The correct answer is D - Write tests that will be used to know when a story has been correctly developed.

This practice aligns with Test-Driven Development (TDD) and Acceptance Test-Driven Development (ATDD), which are common in agile environments. Agile promotes defining "done" through clear acceptance criteria and tests before coding begins.

From PMI Agile Practice Guide:

"Agile teams use test-first practices, such as TDD or ATDD, where acceptance tests are written before development begins. This ensures that functionality is built to meet agreed expectations." (PMI Agile Practice Guide, Section 5.5 - Agile Testing and Quality Strategies) From Mike Griffiths' PMI-ACP Exam Prep Book:

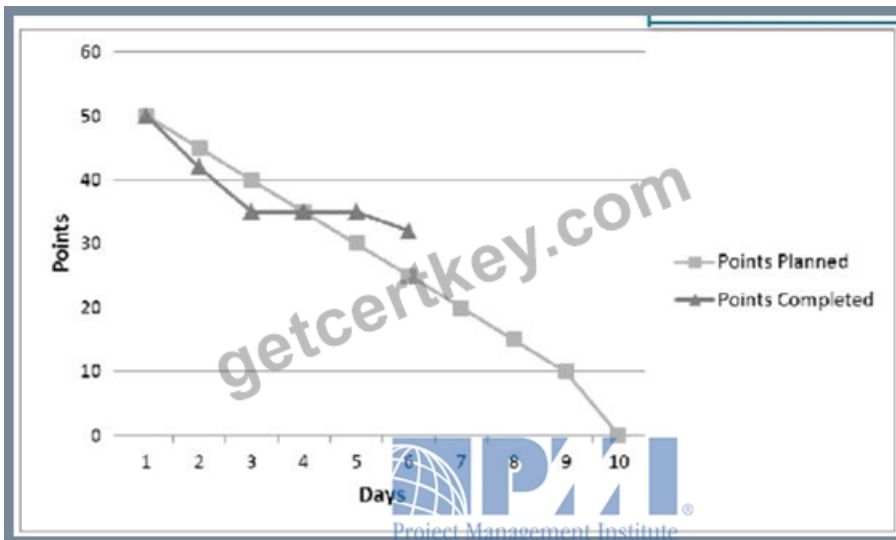

"Defining acceptance criteria or tests before development is a core agile practice. It ensures the team understands what success looks like and builds quality in from the start." (Mike Griffiths, Chapter 6 - Problem Detection and Resolution) Option A may be useful but is unrelated to the new requirements.

Option B is not standard-customers help define acceptance criteria but rarely write tests.

Option C skips an important quality control step and doesn't align with test-first practices.

NEW QUESTION # 59

Based on the chart, what is the current status of the iteration when comparing story points planned versus completed?

- A. The team's velocity is constant.
- B. The team has removed scope.
- C. The iteration is ahead of schedule.
- **D. The iteration is in jeopardy.**

Answer: D

NEW QUESTION # 60

A project manager was assigned to lead the development of a new application for a company. The application will be widely used by all company employees around the world. During the first meeting with key project stakeholders, the project manager was asked to find a way to determine all possible types of users who may interact with the application that is going to be developed. What should the project manager do next?

- A. Engage the human resources (HR) team to identify the key users and interview all of them accordingly.
- **B. Identity and create personas that can help the team better understand the needs of the target user base.**
- C. Build a minimum viable product (MVP), a standard application for all users, and release the new version (per users/areas).
- D. Push it back due to the number of users and socialize the idea of developing a standard application and training session for all users.

Answer: B

NEW QUESTION # 61

The Scrum Master is a participant in the Sprint Retrospective.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 62

.....

Customers of Getcertkey will also get up to 90 days of PMI Certified ICT Expert PMI-ACP free real questions updates as a bonus perk.
