We not only do a good job before you buy our MB-820 test guides, we also do a good job of after-sales service. Because we are committed to customers who decide to choose our MB-820 study tool. We put the care of our customers in an important position.

We provide you with global after-sales service. If you have any questions that need to be consulted, you can contact our staff at any time to help you solve problems related to our MB-820 qualification test. Our thoughtful service is also part of your choice of buying our learning materials. Once you choose to purchase our MB-820 test guides, you will enjoy service.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q19-Q24):

NEW QUESTION # 19

You are developing a codeunit for a company that uses Business Central.

The code unit must be run only during installation of an extension package.

You need to create the codeunit.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
Codeunit trigger
codeunit 50000 Test
(
    Subtype=;
    trigger
        begin
        end;
    }
)
```

Subtype dropdown: Install, Normal, Test, Upgrade

Trigger dropdown: OnBeforeTestRun, OnInstallAppPerCompany, OnCheckPreconditionsPerCompany, OnCheckPreconditionsPerDatabase

Answer:

Explanation:

```
Codeunit trigger
codeunit 50000 Test
(
    Subtype=;
    trigger
        begin
        end;
    }
)
```

Subtype dropdown: Install, Normal, Test, Upgrade

Trigger dropdown: OnBeforeTestRun, OnInstallAppPerCompany, OnCheckPreconditionsPerCompany, OnCheckPreconditionsPerDatabase

Explanation:

Subtype: Install

Trigger: OnInstallAppPerCompany

You are developing a codeunit that should only run during the installation of an extension package.

Options:

- * Subtype: The correct subtype is Install, as it indicates that the codeunit runs only when the extension is being installed.
- * Trigger: The correct trigger for running during installation is OnInstallAppPerCompany, which handles code execution when the app is installed for a specific company.

NEW QUESTION # 20

You need to improve performance when ticketAPI is used to analyze the POS data. What should you do?

- A. Enable read scale-out on the Business Central database.
- B. Set the OData_READONLY_ENABLED parameter to True in the Business Central admin center.
- C. Set the DataAccessIntent property to Readonly on the ticketAPI API page.

- D. Set the `AccessByPermission` property to `Read` on the `ticketAPI` API page.

Answer: A

Explanation:

* Read Scale-Out:

* Read scale-out is a feature in Business Central that allows you to improve performance by distributing read-only queries (such as the ones from the `ticketAPI`) across multiple read replicas in the cloud database. This reduces the load on the primary database and helps improve the response time for read-intensive operations, like analyzing POS data through the `ticketAPI`.

* Data Access Intent - `ReadOnly`:

* When enabling read scale-out, you can configure the `DataAccessIntent` property of APIs to be `ReadOnly`. This directs the system to use read replicas to handle read-only queries, which enhances performance by offloading such queries from the primary database.

* Why Not Other Options?

* Option A (`ODataReadonlyGetEnabled`): This parameter is unrelated to read scale-out and primarily affects OData services behavior, not API performance tuning.

* Option B (`AccessByPermission`): Setting the permission to `Read` does not directly affect the performance. It only controls access based on user permissions.

* Option D (`DataAccessIntent` `ReadOnly`): While setting this property to `ReadOnly` helps in read-only operations, enabling read scale-out (option C) ensures the underlying infrastructure is optimized to handle such read operations, which is the fundamental action required.

Reference Documentation:

* Read Scale-Out in Business Central

* Data Access Intent in AL

NEW QUESTION # 21

You have the following XML file sample for the Items list:

```

<Items>
  <Item No="1000">
    <Description>Table</Description>
  </Item>
  <Item No="1001">
    <Description>Chair</Description>
  </Item>
  <Item No="1002">
    <Description>Sofa</Description>
  </Item>
</Items>

```

You plan to create the next XML file by using an XMLport object.

You need to complete the code segment to export the file in the required format. How should you complete the code segment? To answer, select the appropriate options in the answer area.

Microsoft

```
schema
{
    textelement(Items)
    {
        (Item; Item)
        Fieldattribute
        Fieldelement
        Tableelement
        Textelement
    }
    {
        (No; Item."No.")
        Fieldattribute
        Fieldelement
        Textattribute
        Textelement
    }
    {
        (Description; Item.Description)
        Fieldattribute
        Fieldelement
        Textattribute
        Textelement
    }
}
```

Answer:

Explanation:

```
schema
{
    textelement(Items)
    {
        (Item; Item)
        Fieldattribute
        Fieldelement
        Tableelement
        Textelement
    }
    {
        (No; Item."No.")
        Fieldattribute
        Fieldelement
        Textattribute
        Textelement
    }
    {
        (Description; Item.Description)
        Fieldattribute
        Fieldelement
        Textattribute
        Textelement
    }
}
```

Explanation:

Node types**NEW QUESTION # 22**

You need to log an error in telemetry when the business process defined in the custom application developed for Contoso, Ltd fails. How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the Microsoft Dynamics 365 schema browser with the following code:

```
procedure SendTelemetrySignal()
var
    CustDimension: Dictionary of [Text, Text];
begin
    CustDimension.Add('result', 'Process failed');
    CustDimension.Add('reason', 'critical error in code');
    LogMessage('PT001', 'Business Process is failed.', Verbose::Critical, CustDimension);
end;
```

Three dropdown menus are shown, each with five options: Critical, Normal, Verbose, and Warning. The 'Critical' option is highlighted with a red box in the first dropdown. The 'All' option is highlighted with a red box in the second and third dropdowns.

Answer:

Explanation:

```

Code to send a telemetry signal from extension

procedure SendTelemetrySignal()
var
    CustDimension: Dictionary of [Text, Text];
begin
    CustDimension.Add('result', 'Process failed');
    CustDimension.Add('reason', 'critical error in code');
    LogMessage('PT001', 'Business Process is failed.', Verbosity::[ Critical ], TelemetryScope::[ All ], CustDimension);
    DataClassification::[ CustomerContent , TelemetryScope::[ All ], CustDimension);
end;

```

Explanation:

```

procedure SendTelemetrySignal()
var
    CustDimension: Dictionary of [Text, Text];
begin
    CustDimension.Add('result', 'Process failed');
    CustDimension.Add('reason', 'critical error in code');
    LogMessage('PT001', 'Business Process is failed.', Verbosity::[ Critical ], TelemetryScope::[ All ], CustDimension);
    DataClassification::[ CustomerContent , TelemetryScope::[ All ], CustDimension);
end;

```

Verbosity:Critical: This ensures that the telemetry logs the failure as a critical event.

DataClassification:CustomerContent: This helps classify the error as related to customer data.

TelemetryScope>All: This ensures that the error is visible across all relevant telemetry scopes, making it easier to monitor the issue in real-time.

NEW QUESTION # 23

When sending data to a REST service, what method of the HttpClient class is typically used?

- A. PostAsync
- B. GetAsync
- C. DeleteAsync
- D. PutAsync

Answer: A

NEW QUESTION # 24
