OGA-032 Ressourcen Prüfung - OGA-032 Prüfungsguide & OGA-032 Beste Fragen

Geben Sie sich alle erdenkliche Mühe, um die richtige Prüfungsmaterialien für die The Open Group OGA-032 Zertifizierungsprüfung in dieser komplizierten und wechselhaften Informationsepoche zu finden? Wir freuen uns darüber, dass Sie EchteFrage, dieser echte und zuversichtliche Ausbildungsmaterialien zur The Open Group OGA-032 Zertifizierungsprüfung schließlich finden. Sie werden Ihnen helfen, das schätzige The Open Group OGA-032 Prüfungszertifikat von zu erhalten.

The Open Group ArchiMate 3 Part 2 Exam OGA-032 Prüfungsfragen mit Lösungen (Q10-Q15):

10. Frage
Please read this scenario prior to answering the question
ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.
Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.
The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.
Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.
ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day.
The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service. When the trading application receives a confirmation file back from the trading service, it passes it to the reconciliation application, which updates the plan recordkeeping database.
The lead application Architect has decided to merge the pricing application, the trading application and the reconciliation application

into one application, which will be serving the pricing, trading and reconciliation processes respectively. The reason for this is that maintenance costs for these three components are too high and the performance is too slow. This implementation will increase the performance and lower the maintenance cost significantly.

The CIO has agreed on this plan, but wants this to be done in two phases, each in a separate project. Phase 1 should include the merger of the Trading and Pricing applications. Phase 2 should then merge the merged applications with the Reconciliation application respectively. Each project phase has a number of defined deliverables. Phase 1 has two deliverables, TraPri application implemented and tested' and 'Active TraPri application', whichtogether form a first transition architecture. Phase 2 has two deliverables, 'Recon 2.0 application implemented and tested' and 'Back-up applications phased out', which together form the second transition architecture. These two projects are part of the ArchiSurance application integration program scheduled for the next 6 months.

Refer to the Scenario

You have been asked by the lead application architect to show how the applications used for daily trading can be migrated. This should include a description of the work packages, deliverables and transition architectures.

Which of the following answers best describes the applications and migration plan?

- A. A diagram of a process flow AI-generated content may be incorrect.
  - □
- B. A diagram of a process AI-generated content may be incorrect.
  - □
- C. A diagram of a trading application AI-generated content may be incorrect.
  - □
- D. A diagram of a process flow AI-generated content may be incorrect.
  - □

Antwort: D

Begründung:
We need to determine the best model that:
* Shows the current applications and their functions- Pricing, Trading, and Reconciliation applications.
* Represents the migration phases-
* Phase 1:Merges the Trading and Pricing applications intoTraPri.
* Phase 2:MergesTraPriwith the Reconciliation application to createRecon 2.0.
* Includes transition architectures- Each phase has distinct deliverables marking the transition from old applications to new merged applications.
* Shows the work packages and dependencies- The sequence of activities leading to the final implementation.
Why D is the Best Choice:
#Clearly distinguishes baseline (existing) applications and the new applicationsafter the migration.# Illustrates the two transition states correctly-
* First transition:Implementation and activation of theTraPriapplication.
* Second transition:Implementation ofRecon 2.0and phase-out of backup applications.#Depicts the migration process sequentially- Ensuring a clear understanding of how the applications evolve over time.#Work packages and deliverables are well structured- Aligning with the phases described in the scenario.
Why Not A, B, or C?
* A:Does not correctly represent the transition phases and their deliverables.
* B:Lacks clarity in differentiating baseline applications from transition architectures.
* C:Misrepresents dependencies and transition states, making the migration process unclear.

11. Frage
Please read this scenario prior to answering the question
The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.
Located in an area prone
to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities. To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.
The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging.
Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to

specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

Refer to the Scenario

The program manager overseeing the data center transformation has asked you to model an outline of the implementation plan which has three stable states defined. You should show the deliverables associated with each plateau in connection with the physical elements. Additionally, you need to show how each phase contributes to achieving a stable state for the data center transformation. Which of the following answers provides the best description?

- A. A diagram of a data center Description automatically generated

  □
- B. A diagram of a software system Description automatically generated

  □
- C. A diagram of a data processing process Description automatically generated

  □
- D. A diagram of a software process Description automatically generated

  □

Antwort: C

Begründung:

This question focuses on modeling the implementation plan for the data center transformation at ArchiSurance. The goal is to represent how the different phases of the project contribute to achieving the three stable states, or plateaus, while illustrating the deliverables connected to these plateaus and the physical elements involved.

Key ArchiMate® 3.2 Concepts Applied:

* Plateaus: Plateaus represent intermediate stable states within an architecture transformation, showing the condition of the architecture at specific moments in time. In this scenario, the plateaus correspond to the stable data center configurations at different phases:

* Plateau 1: Only the old data center is in use.

* Plateau 2: Both the old and new data centers are in use simultaneously.

* Plateau 3: Only the new data center is in use, and the old data center is fully decommissioned.

* Physical Elements: These refer to the data centers, hardware, software, and networks that make up the infrastructure being migrated. These should be clearly depicted in connection with each phase of the transformation program.

* Deliverables and Phases: Each phase of the transformation process includes specific deliverables, such as:

* Procurement of new hardware and software.

* Setting up and testing the new data centers.

* Transitioning between the old and new data centers.

* Dismantling the old data center and returning its hardware for refunds.

* Work Packages and Dependencies: Work packages represent activities or tasks in ArchiMate® and are connected to the plateaus. These must be modeled with proper sequencing, showing how each phase contributes to reaching the next stable state.

Why Option A is Correct:

* Option A accurately represents the three plateaus (stable states) and clearly illustrates the deliverables (e.g., the new data center, tested hardware and software, and dismantled old data center) in relation to each phase of the transformation.

* The connections between the physical elements (such as the centralized data center, distributed data center, and backup data center) are properly displayed and aligned with the described multi-phase process.

* The phases are laid out logically, showing how each phase (e.g., procurement, testing, transition) leads to the next stable state (plateau), following the principles of a plateau and work package transformation in ArchiMate®.

* The flow of deliverables from one plateau to the next is consistent with the need for dependencies (e.g., the new data center cannot be fully active until the hardware and software have been tested in parallel).

Why Other Options Are Incorrect:

* Option B and Option D do not show the relationships between the phases and the stable states as clearly as Option A. They lack some critical connections or do not accurately represent the progression between plateaus and the physical infrastructure.

* Option C is closer but misses important sequencing in how the work packages (activities) and plateaus interact, leading to an

incomplete representation of the transformation.

Conclusion:

Option A provides the most complete and accurate description based on ArchiMate® 3.2 modeling principles.

It correctly demonstrates how each phase of the data center transformation contributes to achieving the stable states (plateaus) and ensures that the physical elements, work packages, and deliverables are properly aligned.

12. Frage

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success. Based on this assessment, the board has made the decision to setup a subsidiary company to mass- produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production. Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario.

The first transition aims to adjust

current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly. It is important to consider existing supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

You have been asked to model parts of the overall scenario, including migration planning, the motivations driving the migration, and the work packages necessary to achieve the desired deliverables.

Which of the following answers best describes the scenario?

- A. A diagram of a process Description automatically generated

  □

- B. A diagram of process flow Description automatically generated

  □

- C. A diagram of a process Description automatically generated

  □

- D. A diagram of a process Description automatically generated

  □

Antwort: B

Begründung:

This scenario involves migration planning for ArchiCar as it transitions from a product-centric approach to an operational excellence strategy for mass-producing affordable cars in emerging markets. The task is to model the steps involved, including work packages, deliverables, and the motivations driving the transitions.

Key ArchiMate® 3.2 Concepts Applied:

* Capabilities and Transition Phases:

* The existing capabilities-R&D, material sourcing, and engineering-need to be adjusted to fit the new strategy. In particular:

* Revising R&D targets to align with the goal of affordable production.

* Revising the procurement strategy to optimize material sourcing.

* Introduction of a process focus in the second phase to shift from a product-centered approach to operational excellence.

* Two transition states are identified:

* Plateau 1 (Adjusted Capabilities):Focuses on revising theR&D strategyand procurement strategy.
* Plateau 2 (Shifted Focus):Involves shifting to a process-oriented focus, adjusting material sourcing, and implementing aprocess frameworkto enableend-to-end process thinking.
* Work Packages and Deliverables:
* Work packagesinclude activities such asrevising R&D strategyandprocurement strategy during the first transition, and thendeveloping process focusandimplementing a process frameworkin the second transition.
* These work packages are linked tokey deliverables:
* Plateau 1: Realigning R&D and procurement strategies to achieve adjusted capabilities.
* Plateau 2: Implementing a process framework, shifting to process-orientedthinking, and achieving the operational excellence goals.
* Motivation Elements:
* The migration is driven by a need torealign current capabilities(such as focusing R&D on affordability and optimizing procurement) and a requirement toshift focusfrom product leadership to operational excellence.
* The external driver is the competition and market opportunity in emerging markets, where cost is more critical than luxury.
* Dependencies and Constraints:
* Supplier contracts may impose constraints on how quickly procurement strategies can change, which is considered in the transition planning.
* Theprocess frameworkmust be implemented in a way that supportsend-to-end process thinking
.
Why Option B is Correct:
* Option Baccurately reflects the two transition phases (Plateaus 1 and 2) and shows the appropriate work packages and deliverables in line with the scenario.
* It clearly models the steps forrevising R&D strategyandprocurement strategyin the first transition, and the shift to aprocess focusin the second transition.
* Theprocess frameworkand its link toend-to-end process thinkingand procurement strategy are also correctly modeled, fulfilling the requirements of the scenario.
* Motivationsfor the changes, such as thefocus on the price/quality ratio, and the external drivers for shifting strategy are well captured.
Why Other Options Are Incorrect:
* Option AandOption Cmisrepresent or omit important relationships between work packages, such as the link between theprocess frameworkand theend-to-end process thinking.
* Option Ddoes not correctly capture the sequence of work packages and the logical flow of transitions between phases.
Conclusion:
Option Bprovides the most complete and accurate description of the scenario, correctly illustrating the migration planning,motivations, and thework packagesnecessary to achieve the target state. It aligns well with ArchiMate® 3.2 modeling standards and meets the scenario's requirements.

13. Frage
Please read this scenario prior to answering the question
ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.
Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.
The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.
Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a setof business rules. Each day's captured manual exchange transactions accumulate in a transaction database.
ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service.
When the trading application
receives a confirmation file back from the trading service, it causes the reconciliation application to update the plan recordkeeping database.
The account management and L&D applications are hosted on separate application server clusters. Each cluster is a physically separate host that runs application server software on a set of virtualized hosts. All of these applications use a database server infrastructure that is hosted on another separate cluster of virtualized servers also on a dedicated physical host. The pricing, consolidation, trading and reconciliation applications, however, are batch applications that run on the ArchiSurance mainframe computer. All application hosts are connected via a converged data center network (DCN), which also connects them to a storage

area network (SAN) as well as a wide area network (WAN) that is used to communicate with the external trading service. The SAN includes two physically separate storage arrays, one of which holds data for all databases, and another that holds data for all files.

Refer to the Scenario

The systems analysts would like to better understand the business processes and applications for daily fund trading. You have been asked to describe the business processes and sub-processes, the applications that they use, the data objects accessed by those applications, and the external application services that access some of those data objects.

Which of the following is the best answer? Note that you are not required to model the business actors/roles.

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Antwort: C

Begründung:

In this scenario, the goal is to model thebusiness processes, theirsub-processes, theapplicationssupporting these processes, and thedata objectsthese applications access. Additionally, external services that access some of these data objects need to be shown. This includes capturing the key processes and their dependencies, as well as understanding how the applications interact with data and external services.

Key ArchiMate® 3.2 Concepts Applied:
* Business Processes and Sub-Processes:
* Transaction Capture Process: Consists of two sub-processes:
* Manual Exchange
* Loans & Distribution (L&D)This process is responsible for capturing transactions from users through different applications (Online Account Management, L&D Application).
* Pricing Process: This process uses theMutual Fund Pricesfrom a third-party service and the Plan Balancesto validate and price trades.
* Trading Process: This process generates aTrade Fileand interacts with an externalTrading Service.
* Reconciliation Process: This final process updates thePlan Recordkeeping Dataafter confirming trades from theExternal Trading Service.
* Applications and Data:
* Online Account Management ApplicationandL&D Application: These capture user inputs for transactions and maintainTransaction DataandPlan Balances.
* Pricing Application: UsesMutual Fund PricesandTransaction Datato generateTrade Data.
* Trading Application: SubmitsTrade Dataand receives aConfirmation Filefromthe external Trading Service.
* Reconciliation Application: Uses theConfirmation Fileto updatePlan Recordkeeping Data.
* External Application Services:
* Third-Party Information Service: ProvidesMutual Fund Prices.
* External Trading Service: Processes trades and returns aConfirmation File.
* Data Objects:
* Transaction Data: Captured by the transaction capture processes.
* Mutual Fund Prices: Received from the third-party service.
* Trade Data: Generated by the pricing and trading applications.
* Plan Recordkeeping Data: Updated by the reconciliation process after trade confirmation.
Why Option B is Correct:
* Option Bprovides the most complete and accurate representation of the scenario. It captures the business processes(Transaction Capture, Pricing, Trading, Reconciliation) and their sub-processes, while showing the appropriate connections to theapplicationsthat support these processes.
* It clearly depicts thedata objects(Transaction Data, Plan Balances, Trade File, Mutual Fund Prices, Plan Recordkeeping Data) and their flows between the processes and applications.
* The model also includes theexternal services(Third-Party Information Service and External Trading Service), showing how these interact with the internal applications and data objects.
* It accurately represents the flow ofTrade Datafrom thePricing Applicationto theTrading Application
, and the use ofMutual Fund Pricesby thePricing Process.
Why Other Options Are Incorrect:
* Option AandOption Dmiss some critical connections between the applications and the external services. They also lack clarity in how the data flows between the processes and applications.
* Option Cdoes not adequately represent the interaction between the applications and the external services (e.g., Third-Party Information Service), which is a key requirement in this scenario.

Conclusion:
Option Bprovides the best and most accurate description of the business processes, applications, data objects, and external services involved in ArchiSurance's daily fund trading operations, following ArchiMate® 3.2 standards for modeling business processes and applications.

14. Frage
Please read this scenario prior to answering the question

ArchiAir Catering Services (ACS) manages the catering services for ArchiAir, a leading airline. ACS is the sole catering supplier for all ArchiAir flights, and its services include full provisioning to the aircraft.

Currently, ACS operates three central production facilities, supported by distribution hubs and local pre-flight production facilities. The central production facilities are responsible for producing standardized non-food materials (such as plates, cutlery, and boxes), non-perishable food products, and key ingredients required by the local production facilities. These materials are subsequently distributed to the distribution hubs, whichalso serve as warehouses for the local production facilities. Within the local production facilities, multiple production machines are utilized, each featuring dedicated workstations for chefs and quality inspectors. Most of the local production facilities employ fully automated assembly lines, including built-in packaging stations. The loaded service trolleys are then transported to the aircraft using small lorries.

In response to investor pressure for ArchiAir to reduce its carbon footprint, the CEO of ACS has announced a plan to address this environmental concern. Subsequently, the Ministry of Social Welfare and Health has enacted a law mandating a reduction in CO_2 emissions from all production facilities by the end of the year. Additionally, the airline's decision to raise ticket prices due to escalating fuel costs has led to a decrease in passenger numbers. This, in turn, impacts the volume of non-food materials required from ACS. An internal investigation has produced a report highlighting the potential benefits of centralizing production facilities and reducing the number of distribution centers. Such changes would result in lower CO_2 emissions while still effectively meeting all the requirements of ArchiAir.

In addition to evaluating its supply chain to reduce its carbon footprint, ArchiAir is taking proactive steps to achieve a net zero carbon footprint for its IT operations. The Chief Information Officer (CIO) has identified two crucial requirements to support this endeavor. The first requirement involves switching to renewable energy for ACS facilities, which are often located in remote areas where traditional fuels are the primary source of energy. To align with sustainability goals, ArchiAir aims to transition these facilities to renewable energy sources. By utilizing renewable energy, ArchiAir can significantly reduce its reliance on traditional fuels and contribute to a greener operation. The second requirement pertains to the scalability of ArchiAir's IT operations, taking into account the airline's susceptibility to seasonal changes in demand. The CIO has observed notable disparities between sites that have additional blade servers and can scale their capacity, and sites that solely rely on the two mainframes housed in central facilities. A comprehensive report has revealed that the blade servers have a negligible impact on resource waste, whereas the mainframes are notorious for their power inefficiency, particularly during periods of low demand.

Refer to the Scenario

Which of the following answers best describes the proposed transition from baseline to target, including details of motivation for changes? Note that there is no need to show the details of the target state.

- A. A diagram of a process Description automatically generated
  - □
- B. □
- C. □
- D. □

Antwort: B

Begründung:
The correct answer isD, as it best describes the transition from the baseline to the target state, including the motivation for changes based on the scenario. Here's a detailed explanation of whyDis the most accurate model:

* Baseline and Target:
* TheBaselinestate in all answers correctly depicts the current structure of ACS's operations, including theACS Central Production,Local Trucking,ACS Local Production, andFully Automated Assembly Line.
* Dcaptures the essential transition from this baseline state to the target state by illustrating how the organization is aiming to decrease CO_2 emissions, as required by the new regulations, and how they intend to centralize production facilities.
* Motivation for Changes (Decrease in CO_2 Emissions):
* The CEO's plan to reduceCO_2 emissionsis a critical driver for change. This is captured clearly in D, which shows the effects ofDecreasing CO_2 Emissions,Complying with Laws and Regulations, andCentralizing Production Facilities.
* TheMinistry of Social Welfare and Health's lawmandating CO_2 reductions is accurately reflected inD, showing compliance as part of the motivation.
* Dalso depicts the motivation to centralize production facilities, which helps reduce CO_2 emissions and aligns with the internal report suggesting that fewer distribution centers can meet ACS's needs effectively.

* Business and Environmental Factors:
* The scenario also points out thatpassenger numbers have decreaseddue to rising ticket prices, which reduces the demand for non-food materials from ACS. This factor is linked to the centralization effort, as reducing the need for distribution centers can reduce costs while still meeting business needs.
* Dreflects this by linkingFewer Distribution CentersandCentralized Production Facilitiesto both decreased emissions and operational efficiency.
* Compliance with Laws and Regulations:
* Dshows a clear connection between compliance withCO_2 Emission Lawsand theAmount of CO_2 Emissionsgenerated by ACS, which is an essential driver of change in the scenario.
* The need to ensure that emissions are within the legal limit is modeled effectively inD, reflecting the scenario's requirement to meet regulatory expectations by the end of the year.
* Centralization of Production:
* The scenario suggests thatcentralizing productionis one way to reduce emissions and achieve operational efficiency. This is depicted clearly inD, whereProduction Facilities Centralized leads to both fewer distribution centers and a significant decrease in CO_2 emissions.
* Dlinks the motivation for fewer distribution centers to environmental sustainability (CO_2 reduction) as well as operational improvements.
* Comprehensive ArchiMate® 3 Compliance:
* Daligns well with ArchiMate® 3 standards. It models theMotivation Elementssuch as goals (e.g., Decrease CO_2 Emissions), assessments (e.g.,CO_2 Emission Above Norm), and requirements (e.
g.,Comply with Laws and Regulations) accurately.
* The relationships between these motivation elements are correctly depicted using ArchiMate® connectors like influences and associations, ensuring that the transition from baseline to target is clear and fully compliant with ArchiMate® 3 best practices.
Conclusion:AnswerDprovides the best representation of the proposed transition, focusing on the motivations for centralization and reduction of CO_2 emissions. It accurately reflects the scenario's requirements, including legal compliance, environmental goals, and operational changes, all while following ArchiMate® 3 modeling standards.
