Adobe Workfront Project Manager Certified Professional Sample Questions (Q63-Q68):

NEW QUESTION # 63

The executive team at Company A has asked the Workfront System Administrator how they can get visibility into the health, importance, and strategic alignment of active projects across the organization so that they can quickly make data-driven business decisions.

Which report grants the executive team this visibility?

- A. A portfolio report showing all projects grouped by team showing project condition, the alignment score, and custom data aligning the project initiative to business goals.
- **B. A program report showing active projects grouped by department showing program health, project urgency, and custom data aligning the project initiative to business goals.**
- C. A project report showing active projects grouped by portfolio showing project condition, project priority, and custom data aligning the project initiative to business goals.

Answer: B

Explanation:

For executive-level reporting, a program report grouped by department provides a holistic view of ongoing initiatives. This includes the health of programs, urgency, and alignment with business goals. This type of report is essential for leadership teams to assess overall performance and make informed decisions that align with the company's strategic objectives.

NEW QUESTION # 64

A stakeholder has identified a potential scheduling conflict on a current project. This conflict may affect the completion date by pushing it out two weeks. The stakeholder wants to document this timeline risk.

Which action should the stakeholder take to log the risk?

- A. Log an issue on the project and explain that the completion date is at risk.
- **B. Log a risk as part of the project business case and identify it as a "schedule" risk.**
- C. Create a task in the project and set the Planned Completion Date for 2 weeks.

Answer: B

Explanation:

In Adobe Workfront, risks associated with a project should be logged as part of the project business case. The "Risk" section within the business case allows stakeholders to document any potential threats to the project timeline, scope, or resources. Identifying this risk as a "schedule" risk helps communicate the potential delay to the project stakeholders and allows it to be tracked and mitigated effectively.

NEW QUESTION # 65

Given this information regarding a Task:

Planned Start Date: May 14

Actual Start Date: May 14

Planned Completion Date: May 20

Projected Completion Date: May 22

Percent Complete: 50%

Duration: 5 Days

Planned Hours: 8 Hours

Status: In Progress

If today's date were May 19, what would be the Task's progress status?

- **A. At Risk**
- B. On Time
- C. Behind

Answer: A

Explanation:

In Workfront, when the projected completion date exceeds the planned completion date and the task is only 50% complete by May 19, it is automatically flagged as "At Risk." This alerts the project manager that the task is not progressing according to the original plan, potentially causing delays in the project timeline.

NEW QUESTION # 66

In the approval path shown below, which Project Status will the Project be if rejected?

- **A. Rejected**
- B. Requested
- C. Current

Answer: A

Explanation:

In Adobe Workfront, an approval process can define what happens when an object is approved or rejected. The screenshot shows that the approval process starts when the project status is set to Requested, and the approval path includes an If rejected setting. In that setting, the displayed rejection status is Rejected. Adobe Workfront documentation explains that when an approval path has a rejection status configured, the rejected object moves to the selected rejection status. Adobe's approval-process documentation also notes that if the rejection status itself is associated with another approval process, the object can move into that status as pending approval; however, in this case, the visible selected rejection status is simply Rejected. The Requested status is the status that triggers the approval process, not the status after rejection. Current is a normal active project status and is not shown as the configured rejection result. Therefore, based on the approval path shown, the project status will be Rejected if the approval is rejected.

NEW QUESTION # 67

Which initial project setting would a project owner use to identify and report on key tasks on a project?

- A. Resource Leveling Mode
- **B. Milestone Path**
- C. Schedule

Answer: B

Explanation:

In Adobe Workfront, the initial project setting used to identify and report on key tasks is the Milestone Path. Adobe documentation explains that milestones can be associated with tasks to indicate important steps in the life of a project, and that the collection of predefined milestones is called a milestone path. Workfront also states that milestone paths allow key tasks in a project to be associated with predefined milestones, giving managers and stakeholders a high-level view of project progress. In practice, the project owner applies a milestone path to the project first, then associates individual key tasks with milestones from that path. This supports milestone reporting and milestone views across projects. Schedule controls working and non-working time for date
