## New Exam Cloud-Digital-Leader Materials - Cloud-Digital-Leader Exam Tutorial

In the present society, the workplace is extremely cruel. There is no skill, no certificate, and even if you say it admirably, it is useless. If you want to work, you must get a Cloud-Digital-Leader certificate. The certificate is like a stepping stone. It is the key to the unimpeded workplace and the cornerstone of value. And our Cloud-Digital-Leader study braindumps will help you pass the exam and get the certification with the least time and efforts. Just buy our Cloud-Digital-Leader learning question if you want to be successful!

## Google Cloud Digital Leader Sample Questions (Q334-Q339):

### NEW QUESTION # 334

Your organization offers public mobile apps and websites. You want to migrate to a Google Cloud-based solution for checking and maintaining your users' usernames and passwords and controlling their access to different resources based on their identity. Which should your organization choose?

- A. Private Google Access
- B. Compute Engine firewall rules
- C. Identity Platform

- D. VPN tunnels

**Answer: C**

Explanation:

An identity platform is a modern solution for managing the identities of users and devices in a centralized fashion.

#### NEW QUESTION # 335

An organization is operating multiple workloads in containers and requires full control of how the workloads are configured. Which Google Cloud service should the organization use?

- A. Cloud Functions
- **B. Kubernetes Engine**
- C. Compute Engine
- D. Cloud Run

**Answer: B**

#### NEW QUESTION # 336

You are migrating workloads to the cloud. The goal of the migration is to serve customers worldwide as quickly as possible. According to local regulations, certain data is required to be stored in a specific geographic area, and it can be served worldwide. You need to design the architecture and deployment for your workloads. What should you do?

- A. Select a private cloud provider that globally replicates data storage for fast data access
- **B. Select a public cloud provider that guarantees data location in the required geographic area**
- C. Select a private cloud provider that is only active in the required geographic area
- D. Select a public cloud provider that is only active in the required geographic area

**Answer: B**

Explanation:

Explanation

The goal of the migration is to serve customers worldwide as quickly as possible. According to local regulations, certain data is required to be stored in a specific geographic area, and it can be served worldwide. This characteristic is inherent to the public cloud provider.

#### NEW QUESTION # 337

Your company has made plans to roll out OpenShift, a Kubernetes platform solution offered by IBM Red Hat, across all its on-premises and public cloud environments. Given that you are the lead architect responsible for your company's GCP deployments, what type of shared responsibility model will this deployment entail for you?

- **A. IaaS**
- B. SaaS
- C. On premises
- D. PaaS

**Answer: A**

Explanation:

Explanation

The key to remember here is that for a service provided (GCP in this case) to take responsibility for its PaaS, it must offer the service as a managed service. GCP offers its own Kubernetes platform called GKE. But OpenShift is not a Google-offered PaaS solution. As such, Google will not take responsibility for the back-end operations and design of your OpenShift environments. You will need to manage all the VMs that OpenShift will provision as part of its GCP deployment. So this is an IaaS deployment from a shared responsibility model perspective.

### NEW QUESTION # 338

A partner of yours used to have their own private data center. Your company was already on Google Cloud and now they have also moved to Google Cloud. You are investigating whether there are ways to collaborate better or shared services. What would be one good option to consider?

- A. Use VPC Peering to share resources privately between your two organizations.
- B. Use VPC Shared Networks to share common resources.
- C. Use public IP addresses as before. It will automatically be routed internally only.
- D. Use Private Service Access within Google Cloud.

**Answer: A**

Explanation:

VPC Network Peering allows internal IP address connectivity across two Virtual Private Cloud (VPC) networks regardless of whether they belong to the same project or the same organization.

-> Shared VPC is only within an organization - it allows an organization to connect resources from multiple projects to a common Virtual Private Cloud (VPC) network, so that they can communicate with each other securely and efficiently using internal IPs from that network.

-> Private Google Access is only to access Google APIs and services

Reference:

-> <https://cloud.google.com/vpc/docs/vpc-peering>

-> <https://cloud.google.com/vpc/docs/private-google-access>

-> <https://cloud.google.com/vpc/docs/shared-vpc>

### NEW QUESTION # 339

.....

Nowadays the test Cloud-Digital-Leader certificate is more and more important because if you pass it you will improve your abilities and your stocks of knowledge in some certain area and find a good job with high pay.
