CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q269-Q274):

NEW QUESTION # 269

A database administrator performs a full backup periodically and keeps several versions in a cloud instance with increasing storage costs. Which of the following should the administrator consider doing to manage backup retention?

- A. Determine whether a differential backup will satisfy the operational needs.
- B. Identify the need for granular and/or bulk recovery.
- C. Classify backup files based on the sensitivity of data.
- **D. Set up a time frame for the deletion of old backup files.**

Answer: D

Explanation:

To effectively manage backup retention and control increasing storage costs, the administrator should establish a policy for deleting old backup files after a certain time period. This ensures that outdated backups that are no longer needed for recovery are removed, freeing up storage space and reducing costs.

NEW QUESTION # 270

A newly configured VM fails to run application updates despite having internet access. The updates download automatically from a third-party network. Given the following output:

```
CompTIA
$dig +short apac.updateserver.net
38.102.218.7
$dig +short na.updateserver.net
request timeout
```

Which of the following troubleshooting steps would be best to take?

- A. Running a trace to the router
- **B. Checking DNS configurations**
- C. Testing the IP address configuration
- D. Reconfiguring routing protocols

Answer: B

Explanation:

The best troubleshooting step to take given the output is to check DNS configurations. The failure to resolve the "na.updateserver.net" domain suggests a DNS resolution issue, which could be due to incorrect DNS settings, a failure in the DNS service, or an issue with the DNS server itself.

Troubleshooting DNS issues is a crucial skill in cloud management, as DNS plays a fundamental role in network connectivity and access to resources. It is covered under Cloud Concepts in the CompTIA Cloud+ curriculum.

NEW QUESTION # 271

A company has been using a CRM application that was developed in-house and is hosted on local servers.

Due to internal changes, the company wants to migrate the application to the cloud without having to manage the infrastructure.

Which of the following services should the company consider?

- **A. PaaS**
- B. SaaS
- C. IaaS
- D. XaaS

Answer: A

NEW QUESTION # 272

Which of the following is used to detect signals and measure physical properties, such as the temperature of the human body?

- A. Gateways
- **B. Sensors**
- C. Beacon
- D. Transmission protocols

Answer: B

Explanation:

Sensors are used to detect signals and measure physical properties, such as temperature. They are devices that respond to a physical stimulus (like heat, light, sound, pressure, magnetism, or a particular motion) and transmit a resulting impulse for detection and measurement. References: The use of sensors in cloud environments, particularly in IoT (Internet of Things) applications, is included in the technical domains of the CompTIA Cloud+ material.

NEW QUESTION # 273

An organization's web application experiences periodic bursts of traffic when a new video is launched. Users are reporting poor performance in the middle of the month. Which of the following scaling approaches should the organization use to scale based on forecasted traffic?

- A. Manual
- **B. Scheduled**
- C. Load
- D. Event

Answer: B

Explanation:

For periodic bursts of traffic that are predictable, such as when a new video is launched, a scheduled scaling approach is suitable. This strategy involves scaling resources based on forecasted or known traffic patterns, ensuring that the infrastructure can handle the load during expected peak times.

Reference: The use of scheduled scaling to manage predictable traffic increases is discussed within the Management and Technical Operations section of the CompTIA Cloud+ exam objectives.
