

1z0-076 Latest Study Materials - 1z0-076 Guaranteed Questions Answers

BONUS!!! Download part of TopExamCollection 1z0-076 dumps for free: <https://drive.google.com/open?id=1t4IUO7u8o65nRyHBEum5PAnQ9slj7p8i>

In this society, only by continuous learning and progress can we get what we really want. It is crucial to keep yourself survive in the competitive tide. Many people want to get a 1z0-076 certification, but they worry about their ability. So please do not hesitate and join our study. Our 1z0-076 exam question will help you to get rid of your worries and help you achieve your wishes. So you will have more opportunities than others and get more confidence. Our 1z0-076 Quiz guide is based on the actual situation of the customer. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our 1z0-076 test prep so that you can enjoy our products.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 2	<ul style="list-style-type: none">• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

Topic 3	<ul style="list-style-type: none"> Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 4	<ul style="list-style-type: none"> Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 6	<ul style="list-style-type: none"> Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 7	<ul style="list-style-type: none"> Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.

1z0-076 Guaranteed Questions Answers | New 1z0-076 Exam Testking

You may know that we are so popular for the passing rate of our 1z0-076 guide quiz is very high. Generally speaking, 98 % - 99 % of the users can successfully pass the 1z0-076 exam, obtaining the corresponding certificate. In addition, the content of our 1z0-076 Exam Materials is easy to learn and suitable for the public. No matter what your previous learning level is, there will be no problem of understanding.

Oracle Database 19c: Data Guard Administration Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which three types of backups offload with the primary database in a data Guard

- A. Control files
- B. Data files
- C. Archive logs
- D. Online logs
- E. Password files
- F. Broker configuration files

Answer: A,B,C

Explanation:

In a Data Guard environment, you can offload the backups of certain database components to a physical standby database. Incremental backups of a standby database are interchangeable with the primary database, meaning you can apply a backup taken on a standby database to a primary database and vice versa. This includes control files, data files, and archive logs. Backups of control files and nonstandby control files are interchangeable. You can restore a standby control file on a primary database and a primary control file on a physical standby database, demonstrating their interchangeability and the ability to offload control file backups to one database in a Data Guard environment.

NEW QUESTION # 23

Active Data Guard (ADG) databases are widely used to offload reporting or ad hoc query-only jobs from the primary database. Reporting workload profile is different from the primary database and often requires tuning.

Which tool is used to tune SQL workloads running on an ADG database?

- A. Standby Statspack
- B. Automatic Workload Repository (AWR)
- C. Automatic Diagnostic Database Monitor (ADDM)
- D. In-Memory Active Session History (ASH)

- E. SQL Tuning Advisor

Answer: B

Explanation:

AWR collects, processes, and maintains performance statistics for problem detection and self-tuning purposes. In an Active Data Guard environment, where the physical standby database can be used for read-only workloads, AWR can be instrumental in identifying performance bottlenecks and areas for optimization. It provides detailed reports that include wait events, time model statistics, and active session history, making it an invaluable tool for tuning SQL queries and overall database performance in an ADG setup.

NEW QUESTION # 24

There are currently 6 applier and 6 pfilepafef processes running and no idle applier processes on y logical standby database. The max_SERVERS SQL apply parameter and number of archiver processes are both set to 12. Identify two changes, each of which would allow you to increase the number of applier processes.

- A. Increase the parallel_max_server initialization parameter.
- B. Increase the RECOVERY_PARALLEL initialization parameter.
- C. Increase the value for the MAX_SERVERS SQL apply parameter.
- D. Decrease the number of archiver processes on the standby database.
- E. Increase the processes initialization parameter. D Decrease the number of FREPARER processes.

Answer: A,C

Explanation:

To increase the number of applier processes on a logical standby database, the following changes can be made:

C: Increasing the value for the MAX_SERVERS SQL apply parameter would allow for more applier processes to be initiated, assuming that system resources permit.

D: Increasing the PARALLEL_MAX_SERVERS initialization parameter would allow for more parallel execution processes, which can be used by SQL apply to increase the number of applier processes.

Option A is incorrect as decreasing the number of archiver processes will not necessarily increase the number of applier processes; these are unrelated components.

Option B is incorrect because the 'FREPARER' processes do not exist, it seems to be a typographical error, and the 'REPARER' is not a valid Oracle process or parameter.

Option E is incorrect because the RECOVERY_PARALLELISM parameter controls the number of processes used for instance recovery and media recovery, not for SQL apply.

NEW QUESTION # 25

Which three are true about using RMAN in a Data Guard environment?

- A. Backups of control files taken on a physical standby are not interchangeable with a primary.
- B. A recovery catalog is required when RMAN is used to take backups from a logical standby database in a Data Guard configuration if you plan to recover the primary using those backups.
- C. A recovery catalog is required when RMAN is used to take backups from a physical standby database if you plan to recover the primary using those backups.
- D. Backups of archived redo logs taken on a physical standby are interchangeable with a primary.
- E. Backups of data files taken on a physical standby are interchangeable with a primary.

Answer: A,D,E

NEW QUESTION # 26

You created the PRODSBY1 physical standby database for the PROD primary database using ggl and RMAN. You are planning to create a Data Guard Broker configuration. You execute the command:

Which three statements are true regarding the execution of the command?

- A. The PRODSBY1 standby database is automatically added to the configuration if Oracle Net connectivity to the PRODSBY1 database instance is defined on the primary host.

- B. The PRODSBY1 standby database is automatically added to the configuration if DG_BROKER_START is TRUE for PRODSBY1.
- C. The command will execute successfully only if Oracle Net connectivity to the PROD and PRODSBY1 database instances are defined on the primary host.
- D. The command will execute successfully only if the DG_BROKER_START initialization parameter is set to TRUE for the PROD database instance.
- E. The Data Guard Broker configuration files are automatically created in the destinations specified by the DG_BROKER_CONFIG_FILEn initialization parameters on the primary database.
- F. The command will execute successfully only if Oracle Net connectivity to the PROD database instance is defined on the primary host.

Answer: D,E,F

Explanation:

The command executed (CREATE CONFIGURATION 'DGConfig' AS PRIMARY DATABASE IS 'PROD' CONNECT IDENTIFIER IS PROD;) is used to create a Data Guard Broker configuration named 'DGConfig'. The successful execution of this command depends on several conditions:

A: The DG_BROKER_START parameter must be set to TRUE on the primary database to start the Data Guard Broker processes. Without the broker processes running, the configuration cannot be created.

D: Oracle Net connectivity to the PROD database instance must be established on the primary host. This is because the Data Guard Broker requires network accessibility to communicate with the primary database and manage the configuration.

E: When the configuration is created, the Data Guard Broker configuration files are indeed automatically created in the locations specified by the DG_BROKER_CONFIG_FILEn parameters on the primary database.

It's important to note that the command will not automatically add the PRODSBY1 standby database to the configuration (thus B and C are not correct), and there is no requirement for the standby database to have Oracle Net connectivity defined on the primary host for the execution of this command (making F incorrect as well).

NEW QUESTION # 27

.....

When you choose to attempt the mock exam on the Oracle 1z0-076 practice software by TopExamCollection, you have the leverage to custom the questions and attempt it at any time. Keeping a check on your Oracle Database 19c: Data Guard Administration exam preparation will make you aware of your strong and weak points. You can also identify your speed on the practice software by TopExamCollection and thus manage time more efficiently in the actual Oracle exam.
