

CAS-005考題套裝 & CAS-005熱門考題

從Google Drive中免費下載最新的Fast2test CAS-005 PDF版考試題庫：<https://drive.google.com/open?id=10bdIU6JFeM2AIwnNd1qW6ZkbQixiKY65>

Fast2test 題庫網承諾所售的 CAS-005 題庫都是最新，保證順利通過 CAS-005 考試，取得證書。購買我們考題網的任意一科考試題庫都可以免費試用題庫樣品，讓考生確認購買考試題庫的真實性以及適應考題格式。而且購買了我們的 CompTIA CAS-005 考古題的用戶，可以享有一定的折扣優惠和免費更新題庫一年，對於首次參加考試失敗的客戶，憑蓋有考試中心鋼印的考試成績單，將享有退還購買 CAS-005 考古題的全部費用的福利。

CompTIA CAS-005 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.
主題 2	<ul style="list-style-type: none">Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.

主題 3	<ul style="list-style-type: none"> • Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
主題 4	<ul style="list-style-type: none"> • Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.

CompTIA CAS-005熱門考題 & CAS-005證照信息

有人問，成功在哪里？我告訴你，成功就在Fast2test。選擇Fast2test就是選擇成功。Fast2test CompTIA的CAS-005考試培訓資料是幫助所有IT認證的考生通過認證的，它針對CompTIA的CAS-005考試認證的，經過眾多考生反映，Fast2test CompTIA的CAS-005考試培訓資料在考生中得到了很大的反響，建立了很好的口碑，說明選擇Fast2test CompTIA的CAS-005考試培訓資料就是選擇成功。

最新的 CompTIA CASP CAS-005 免費考試真題 (Q147-Q152):

問題 #147

A company implemented a new NAC solution based on 802.1X. However, the IT support team notices that some devices are not being enrolled in the new policies, causing access disruptions for key users. Which of the following solutions will most likely solve this issue and prevent reoccurrence?

- A. Check whether the certificate is signed by a certification authority and manually deployed to each device.
- **B. Include the monitoring agent and digital certificate as part of the patching/updating program, keeping all the corporate devices updated and enrolled.**
- C. Check all the devices without proper access, enrolling them via the solution agent and authenticating to the network.
- D. Implement default credentials to automate RADIUS authentication and grant access to the network if the device owner is an employee.

答案： B

解題說明：

The best solution is to include the monitoring agent and digital certificate as part of the patching/updating program. This will ensure that all corporate devices are kept up-to-date and automatically enrolled in the NAC solution. By integrating this into the patching process, the company can ensure proper device enrollment and reduce access disruptions for key users, preventing the issue from recurring.

問題 #148

An incident response team is analyzing malware and observes the following:

- * Does not execute in a sandbox
- * No network IoCs
- * No publicly known hash match
- * No process injection method detected

Which of the following should the team do next to proceed with further analysis?

- A. Utilize a new deployed machine to run the sample.
- **B. Check for an anti-virtualization code in the sample**
- C. Use an online virus analysis tool to analyze the sample
- D. Search other internal sources for a new sample.

答案： B

解題說明:

Malware that does not execute in a sandbox environment often contains anti-analysis techniques, such as anti-virtualization code. This code detects when the malware is running in a virtualized environment and alters its behavior to avoid detection. Checking for anti-virtualization code is a logical next step because:
It helps determine if the malware is designed to evade analysis tools.
Identifying such code can provide insights into the malware's behavior and intent.
This step can also inform further analysis methods, such as running the malware on physical hardware.

問題 #149

A company wants to improve and automate the compliance of its cloud environments to meet industry standards. Which of the following resources should the company use to best achieve this goal?

- A. Ansible
- B. PowerShell
- C. Python
- D. Jenkins

答案: A

解題說明:

Automating compliance in cloud environments requires a tool that can enforce configurations, manage infrastructure as code, and align with industry standards (e.g., NIST, ISO). Let's evaluate:

- A. Jenkins: A CI/CD tool for automating software builds and deployments. It's not designed for compliance enforcement or infrastructure management.
- B. Python: A programming language that can be scripted for automation but lacks built-in compliance-focused features without significant custom development.
- C. Ansible: An automation tool for configuration management, application deployment, and compliance enforcement. It uses playbooks to define desired states, making it ideal for automating compliance checks and remediation in cloud environments (e.g., AWS, Azure). CAS-005 emphasizes automation tools for security and compliance, and Ansible fits perfectly.

問題 #150

A company receives several complaints from customers regarding its website. An engineer implements a parser for the web server logs that generates the following output:

Browser	User location	Load time	HTTP response
Mozilla 5.0	United States	90ms	302
Chrome 110	France	1.2s	302
Microsoft Edge	India	2.7s	307
Microsoft Edge	Australia	2.4s	300

Which of the following should the company implement to best resolve the issue?

- A. CDN
- B. WAF
- C. NAC
- D. IDS

答案: A

解題說明:

The table indicates varying load times for users accessing the website from different geographic locations. Customers from Australia and India are experiencing significantly higher load times compared to those from the United States.

問題 #151

A security analyst is troubleshooting the reason a specific user is having difficulty accessing company resources. The analyst reviews the following information:

User	Source IP	Source location	User assigned location	MFA satisfied?	Sign-in status
SALES1	8.11.4.16	Germany	France	Yes	Blocked
SALES1	8.11.4.16	Germany	France	Yes	Blocked
ACCT1	192.168.4.18	France	France	No	Allowed
SALES1	8.11.4.16	Germany	France	Yes	Blocked
ACCT1	8.11.4.16	Germany	France	Yes	Blocked
SALES2	8.11.4.20	France	France	Yes	Allowed

Which of the following is most likely the cause of the issue?

- A. The local network access has been configured to bypass MFA requirements.
- **B. A network geolocation is being misidentified by the authentication server**
- C. Administrator access from an alternate location is blocked by company policy
- D. Several users have not configured their mobile devices to receive OTP codes

答案: B

解題說明:

The table shows that the user "SALES1" is consistently blocked despite having met the MFA requirements. The common factor in these blocked attempts is the source IP address (8.11.4.16) being identified as from Germany while the user is assigned to France. This discrepancy suggests that the network geolocation is being misidentified by the authentication server, causing legitimate access attempts to be blocked.

Why Network Geolocation Misidentification?

Geolocation Accuracy: Authentication systems often use IP geolocation to verify the location of access attempts. Incorrect geolocation data can lead to legitimate requests being denied if they appear to come from unexpected locations.

Security Policies: Company security policies might block access attempts from certain locations to prevent unauthorized access. If the geolocation is wrong, legitimate users can be inadvertently blocked.

Consistent Pattern: The user "SALES1" from the IP address 8.11.4.16 is always blocked, indicating a consistent issue with geolocation.

Other options do not align with the pattern observed:

A. Bypass MFA requirements: MFA is satisfied, so bypassing MFA is not the issue.

C. Administrator access policy: This is about user access, not specific administrator access.

D. OTP codes: The user has satisfied MFA, so OTP code configuration is not the issue.
