

# Free PDF Quiz High Pass-Rate Salesforce-MuleSoft-Associate - Reliable Salesforce Certified MuleSoft Associate Exam Dumps

P.S. Free 2026 Salesforce Salesforce-MuleSoft-Associate dumps are available on Google Drive shared by TestPassed: [https://drive.google.com/open?id=1VDF\\_LAtkWIEQ9g9Xs00i-5R1A6mCugO](https://drive.google.com/open?id=1VDF_LAtkWIEQ9g9Xs00i-5R1A6mCugO)

There are three different versions of Salesforce-MuleSoft-Associate practice materials for you to choose, including the PDF version, the software version and the online version. You can choose the most suitable version for yourself according to your need. The online version of our Salesforce-MuleSoft-Associate exam prep has the function of supporting all web browsers. You just need to download any one web browser; you can use our Salesforce-MuleSoft-Associate Test Torrent. We believe that it will be very useful for you to save memory or bandwidth. If you think our Salesforce-MuleSoft-Associate exam questions are useful for you, you can buy it online.

## Salesforce Salesforce-MuleSoft-Associate Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>Recognize and interpret essential integration concepts and terminology: This section evaluates the competency of a Platform Specialist and covers fundamental terms and technical knowledge essential for integration. It includes differentiating cloud service models such as IaaS, PaaS, and SaaS, and the supporting infrastructure such as computing, storage, and scalability principles. The domain further explores network protocols, data formats like XML and JSON, and security concepts in API and enterprise systems. A detailed understanding of HTTP mechanics, RESTful services, and classifications of API types such as GraphQL and AsyncAPI is expected. It also introduces precise terminology necessary for defining API roles and interactions.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Describe the components and benefits of Anypoint Platform for system integration: This section targets the knowledge base of a Platform Specialist and examines how MuleSoft's Anypoint Platform supports enterprise integration. It requires identifying core platform components and understanding their functionality in system connectivity. Candidates must recognize various Anypoint Connectors, both protocol and application-based, and describe the advantages of the runtime and control planes in different hosting environments. It also focuses on the development tools and languages used by integration and DevOps professionals and highlights reusable components within Anypoint Exchange that accelerate integration delivery.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Identify the roles, responsibilities, and lifecycle of an integration project: This section of the exam measures the skills of an Integration Architect and covers the foundational responsibilities within a MuleSoft integration project. It explores why integration initiatives often fail, introducing the IT delivery gap and MuleSoft's framework to bridge it. The content emphasizes the importance of an API-led delivery model that supports both producers and consumers. It also outlines common delivery methodologies, best practices from DevOps, and lifecycle stages—design, implementation, and management—within MuleSoft's product-centric approach. Furthermore, it defines the roles and duties of team members typically involved in such projects.</li> </ul>

## Customized Salesforce-MuleSoft-Associate Lab Simulation, Salesforce-MuleSoft-Associate Exam Demo

We are not exaggerating that if you study with our Salesforce-MuleSoft-Associate exam questions, then you will pass the exam for sure because this conclusion comes from previous statistics. The pass rate of our customers is high as 98% to 100% with our Salesforce-MuleSoft-Associate Practice Engine. We believe you are also very willing to become one of them, then why still hesitate? Just come in and try our Salesforce-MuleSoft-Associate study materials, and we can assure you that you will not regret your choice.

### Salesforce Certified MuleSoft Associate Sample Questions (Q14-Q19):

#### NEW QUESTION # 14

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Use the API specification to build the MuleSoft application
- B. Use the API specification to monitor the MuleSoft application
- C. Design the API specification
- D. Validate the API specification

**Answer: A**

Explanation:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

API Design:

Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

API Implementation:

Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

Validation and Monitoring:

Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

MuleSoft Documentation: Full Lifecycle API Management

APIKit: Building APIs with APIKit

### NEW QUESTION # 15

A developer needs to discover which API specifications have been created within the organization before starting a new project. Which Anypoint Platform component can the developer use to find and try out the currently released API specifications?

- A. API Manager
- B. Runtime Manager
- C. Object Store
- **D. Anypoint Exchange**

**Answer: D**

Explanation:

When a developer needs to discover which API specifications have been created within the organization before starting a new project, Anypoint Exchange is the component to use. Here's a detailed explanation:

Anypoint Exchange:

Purpose: Provides a centralized repository where developers can find and access API specifications, connectors, templates, and other reusable assets.

API Specifications: Developers can search for API specifications defined using RAML or OAS, review their details, and try them out using provided mock services.

Capabilities:

Search and Discovery: Easily search for and discover existing API specifications within the organization.

Try Out APIs: Provides tools to interact with and test APIs directly from the Exchange, allowing developers to understand the API's functionality and behavior.

Documentation: Access detailed documentation and examples for each API specification.

MuleSoft Documentation: Anypoint Exchange

API Specifications: Finding and Using APIs in Exchange

### NEW QUESTION # 16

Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- A. Operations
- **B. API Developer**
- C. API Designer
- D. Integration Architect

**Answer: B**

Explanation:

In a typical MuleSoft integration project, the role of building API implementations is primarily assigned to an API Developer. Here's a detailed explanation:

API Developer:

Responsibilities: Focuses on implementing the technical aspects of APIs, including coding, testing, and deploying API endpoints.

Skills: Requires proficiency in MuleSoft Anypoint Platform, MuleSoft connectors, and API development best practices.

Typical Tasks:

API Implementation: Writing code to implement API logic and data processing.

Integration: Connecting APIs to backend systems, databases, and external services.

Testing: Developing and executing unit and integration tests to ensure API functionality and reliability.

MuleSoft Role Descriptions: API Developer

API Development Lifecycle: Building APIs

### NEW QUESTION # 17

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Switch from a design-first to a code-first approach for IT development
- **B. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- C. Hire more IT developers, architects, and project managers to increase IT delivery
- D. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record

**Answer: B**

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

Decoupling Core IT Projects:

Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

Benefits:

Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

Implementation:

API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

Outcome:

Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

MuleSoft Whitepaper: API-led Connectivity

IT Operating Model: Transforming IT Delivery

### NEW QUESTION # 18

Which component of Anypoint Platform belongs to the platform control plane'?

- **A. API Manager**
- B. Runtime Replica
- C. Anypoint Connectors
- D. Runtime Fabric

**Answer: A**

Explanation:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:

Control Plane:

Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs, applications, and other platform resources.

Components: Includes tools for API management, analytics, security, and governance.

API Manager:

Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.
