

2026 Perfect Latest Integration-Architect Test Dumps | 100% Free Integration-Architect Certification Torrent

BONUS!!! Download part of Prep4away Integration-Architect dumps for free: https://drive.google.com/open?id=1ZuraZOsjH4rCc92Zvzvs8pxJu5_Y3EO9

Prep4away is a leading provider of top-quality Salesforce Certified Integration Architect (Integration-Architect) preparation material for the Integration-Architect test. Our Salesforce Certified Integration Architect (Integration-Architect) exam questions are designed to help customers get success on the first try. These latest Salesforce Integration-Architect Questions are the result of extensive research by a team of professionals with years of experience.

Salesforce Integration-Architect Certification Exam is intended for experienced integration architects and developers who work with Salesforce. Salesforce Certified Integration Architect certification exam is designed to validate the knowledge and expertise required to design and implement complex integrations with Salesforce. Candidates who pass the exam will have a deep understanding of the various integration patterns and technologies available, as well as the ability to design and implement scalable and secure integrations.

Salesforce Integration-Architects are responsible for integrating Salesforce with other third-party applications, databases, and systems. They must have a deep understanding of integration patterns, data architecture, and security protocols. Salesforce Certified Integration Architect certification exam tests the candidate's knowledge on various topics such as integration architecture, data modeling, data management, and API development. Passing Integration-Architect Exam shows that the candidate has the expertise to design and implement highly effective and efficient integrations between Salesforce and other systems.

Achieving the Salesforce Integration-Architect certification will enable you to demonstrate your expertise in designing and implementing complex integrations. Salesforce Certified Integration Architect certification will also enhance your career prospects by making you more attractive to potential employers. Additionally, the certification will give you access to a network of certified professionals who can provide you with support and guidance throughout your career.

Latest Integration-Architect Pass4sure Pdf & Integration-Architect Free Demo & Integration-Architect Study Guide

Are you still feeling uncomfortable about giving up a lot of time to entertain, work or accompany your family and friends in preparation for the exam? Using Integration-Architect quiz torrent, you can spend less time and effort reviewing and preparing, which will help you save a lot of time and energy. Whether you are a worker or student, you will save much time to do something whatever you want. It only needs 5-10 minutes after you pay for our Integration-Architect learn torrent that you can learn it to prepare for your exam. Actually, if you can guarantee that your effective learning time with Integration-Architect test preps are up to 20-30 hours, you can pass the exam.

Salesforce Certified Integration Architect Sample Questions (Q125-Q130):

NEW QUESTION # 125

An Integration Architect has built a solution using REST API, updating Account, Contact, and other related information. The data volumes have increased, resulting in higher API calls consumed, and some days the limits are exceeded. A decision was made to decrease the number of API calls using bulk updates. The customer prefers to continue using REST API to avoid architecture changes.

Which REST API composite resources should the Integration Architect use to allow up to 200 records in one API call?

- A. SObject Collections
- B. Batch
- C. Composite
- **D. SObject Tree**

Answer: D

Explanation:

Explanation

SObject Collections is a REST API composite resource that allows you to create, update, or delete up to 200 records in one API call. You can specify the type of operation (create, update, or delete) for each record in the request body, and the response body will contain the status and IDs of each record. SObject Collections is suitable for bulk operations on records that are not related to each other¹.

SObject Tree is another REST API composite resource that allows you to create up to 200 records in one API call. However, unlike SObject Collections, SObject Tree requires the records to be related to each other in a hierarchy. You can specify the parent and child records in a JSON tree structure, and the response body will contain the reference IDs and URLs of each record.

SObject Tree is suitable for creating nested data in one request².

Batch is a REST API composite resource that allows you to combine up to 25 requests in one API call. Each request can be a different type of operation (query, create, update, delete, etc.) on different objects. The response body will contain the status and results of each request. Batch is suitable for grouping multiple requests into one transaction³.

Composite is a REST API composite resource that allows you to execute a series of REST API requests in one API call. You can use the output of one request as the input of another request using a reference ID. The response body will contain the status and results of each request. Composite is suitable for chaining requests that depend on each other.

Therefore, the correct answer is A, because SObject Collections is the only REST API composite resource that allows bulk updates on records that are not related to each other.

NEW QUESTION # 126

Northern Trail Outfitters (NTO) uses Salesforce to track leads, opportunities and order details that convert leads to customers. However, Orders are managed by an external (remote) system. Sales representatives want to view and update real-time order information in Salesforce. NTO wants the data to only persist in the external system.

Which type of Integration should an architect recommend to meet this business requirement?

- **A. Data Visualization**
- B. Data Synchronization
- C. Batch Processing
- D. Process Orchestration

Answer: A

Explanation:

Explanation

Data Visualization is the type of integration that allows users to view real-time data from an external system without storing it in Salesforce. This can be achieved by using Lightning Web Components, Visualforce pages, or Canvas apps that display data from the external system using APIs or web services. Data Synchronization, Process Orchestration, and Batch Processing are types of integration that involve moving data between systems, which is not required by the business requirement. Reference: Salesforce Integration Architecture Designer Resource Guide, page 9

NEW QUESTION # 127

Northern Trail Outfitters is planning to perform nightly batch loads into Salesforce using the Bulk API. The CIO wants monitoring

recommendations for these jobs. Which recommendation should help meet the requirements?

- A. Write the error response from the Bulk API status to a custom error logging object in Salesforce using an Apex trigger, and create reports on the object.
- **B. Visually monitor in the Salesforce UI using the "Bulk Data Load Jobs" in Salesforce in the setup menu.**
- C. Set the Salesforce debug logs level to "finest", and add the user ID running the job to monitor in the "Debug Logs" in the setup menu.

Answer: B

Explanation:

For monitoring high-volume Bulk API jobs, the standard and most efficient architectural recommendation is to use the native Bulk Data Load Jobs page in Salesforce Setup.

This page provides a comprehensive, out-of-the-box view of all asynchronous API jobs, including their status (Queued, In Progress, Completed, Failed), the number of records processed, and any overall job errors. It allows administrators to download the result files for each batch to see record-level successes and failures without the overhead of custom code or data storage.

Option B is generally discouraged for high-volume nightly loads. Since the Bulk API is designed to bypass standard synchronous logic for performance, writing errors to a custom object for millions of records would consume significant data storage and could trigger additional governor limit issues during the load itself.

Option C is ineffective for Bulk API monitoring; debug logs capture Apex execution but do not monitor the background processing of asynchronous Bulk API batches, and they would quickly become overwhelmed by the volume of data. For enterprise-grade monitoring⁹, the native UI provides the necessary visibility into job health with zero impact on platform performance or storage.

NEW QUESTION # 128

A new Salesforce program has the following high level abstract requirement: Business processes executed on Salesforce require data updates between the internal systems and Salesforce. Which three relevant details should a Salesforce Integration Architect seek to specifically solve for Integration architecture needs of the program?

Which three relevant details should a Salesforce Integration Architect seek to specifically solve for Integration architecture needs of the program?

Choose 3 answers

- A. Integration skills, SME availability and Program Governance details.
- **B. Integration Style Process based, Data based, Virtual integration. E Core functional and non-functional requirements for User Experience design, Encryption needs, Community, and license choices.**
- **C. Timing aspects - real-time/near real-time (synchronous or asynchronous), batch; update frequency.**
- **D. Source and Target system, Directionality, data volume & transformation complexity long with any middleware that can be leveraged.**

Answer: B,C,D

Explanation:

The correct answer is A, C, and D. These are three relevant details that a Salesforce Integration Architect should seek to specifically solve for Integration architecture needs of the program. These details can help the Integration Architect to understand the scope, requirements, and constraints of the integration solution, and to choose the appropriate tools, methods, and patterns. The details are: Source and Target system, Directionality, data volume & transformation complexity along with any middleware that can be leveraged. This detail can help the Integration Architect to identify the systems involved in the integration, the direction of data flow, the amount and complexity of data to be exchanged, and the middleware or platform capabilities that can facilitate the integration. Timing aspects - real-time/near real-time (synchronous or asynchronous), batch; update frequency. This detail can help the Integration Architect to determine the latency, reliability, and scalability requirements of the integration solution, and to choose the suitable integration protocols and techniques.

Integration Style - Process based, Data based, Virtual integration. This detail can help the Integration Architect to select the appropriate integration style that matches the business needs and objectives. Process based integration focuses on orchestrating business processes across systems, data based integration focuses on synchronizing data across systems, and virtual integration focuses on providing a unified view of data across systems.

NEW QUESTION # 129

Northern Trail Outfitters (NTO) has an affiliate company that would like immediate notifications of changes to opportunities in the NTO Salesforce instance. The affiliate company has a CometD client available.

Which solution is recommended in order to meet the requirement?

- A. Configure External Services to call the subscriber in Apex in the Onchange Trigger event as part of the flow.
- **B. Create a PushTopic update event on the Opportunity Object to allow the subscriber to react to the streaming API.**
- C. Create a connected app in the affiliate org and select the "Accept CometD API Requests".
- D. Implement a polling mechanism in the client that calls the SOAP API get updated method to get the ID values of each updated record.

Answer: B

Explanation:

Explanation

Streaming API is the best option for sending real-time notifications of changes to Salesforce data. Streaming API uses a publish-subscribe model to push relevant data to subscribers without polling. Streaming API supports PushTopic events, which are based on SOQL queries that define the data changes to listen for. The affiliate company can subscribe to a PushTopic event on the NTO Salesforce org and receive notifications whenever the data that matches the query changes. This way, the affiliate company can be informed of any updates to the opportunities in the NTO Salesforce instance.

NEW QUESTION # 130

.....

Passing the Salesforce Integration-Architect is the primary concern. To pass the hard Integration-Architect exam on the first try, you must invest more time, effort, and money. To pass the Integration-Architect Exam, you must have the right Salesforce Certified Integration Architect Integration-Architect Exam Dumps, which are quite hard to get online. Get it right away to begin preparing. Prep4away is a reputable platform that has been providing valid, real, updated, and error-free Salesforce Certified Integration Architect Integration-Architect Exam Questions.
