Dump 220-1201 Collection | High Pass-Rate 220-1201 Pdf Version: CompTIA A+ Certification Exam: Core 1 100% Pass

The three versions of our 220-1201 exam questions have their own unique characteristics. The PDF version of 220-1201 training materials is convenient for you to print, the software version can provide practice test for you and the online version is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our 220-1201 free demo first to get a firsthand experience before you make any decision. You will love our 220-1201 study guide for sure!

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q195-Q200):

NEW QUESTION # 195
A company needs to keep a record of tasks performed by an application. Which of the following should the company most likely implement as part of a solution?

- A. Fileshare
- B. Syslog
- C. Database
- D. SAN

Answer: B

Explanation:
Syslog is used to log system events and tasks performed by applications, providing a centralized record of activity.
Why Not A (Fileshare): Fileshares store files but are not designed for event logging.

Why Not C (Database): Databases can store logs but are not a logging mechanism themselves.
Why Not D (SAN): A SAN is a storage solution, not a logging tool.
CompTIA A+ Exam Reference: Core 1 (220-1201), Section 2.6, system monitoring and logging.

NEW QUESTION # 196
A SOHO user cannot connect to the internet. Their configuration shows:
IP: 192.168.223.15
Mask: 255.255.255.0
Gateway: 192.168.233.1
DNS: 8.8.8.8, 4.2.2.1, 4.2.2.2
Baseline documentation shows valid subnet range: 192.168.200.0-192.168.232.255.
Which setting must be changed?

- A. Secondary DNS
- B. Primary DNS
- C. IP Address
- D. Tertiary DNS
- E. Subnet mask
- F. Gateway

Answer: F

Explanation:
The baseline documentation says the valid network range ends at 192.168.232.255, but the user's gateway is 192.168.233.1, which is outside the permitted network range. CompTIA A+ emphasizes that devices must have a gateway inside their own subnet.
Given a mask of 255.255.255.0, the user's subnet is 192.168.223.x, so the gateway must be in 192.168.223.x, not 192.168.233.x.
DNS settings are public and acceptable. The IP address and subnet mask are valid within the documented address space.
Therefore, the incorrect setting is the gateway, which prevents external routing. Correcting it resolves the connection issue, matching CompTIA's routing and TCP/IP troubleshooting procedures.

NEW QUESTION # 197
Which of the following allows an organization to provide remote desktop resources without providing physical workstations to its users?

- A. VDI
- B. SaaS
- C. Containers
- D. RMM

Answer: A

Explanation:
VDI (Virtual Desktop Infrastructure) is a technology that hosts desktop operating systems and applications on centralized servers in a data center or cloud environment, allowing users to access them remotely from any device with an internet connection. The user's device acts as a
"thin client," providing only the display and input interface, while all data and applications remain securely on the organization's servers. This meets the requirement of not providing physical workstations to users and not installing applications or data locally on user devices.

NEW QUESTION # 198
A company wants to use cloud services with the requirement that data will reside on physical hardware that will not be shared with other companies. Which of the following meets this requirement?

- A. Dedicated resources
- B. Hybrid cloud
- C. SaaS

- D. Elasticity

Answer: A

Explanation:
Dedicated resources (sometimes called single-tenant or bare metal) guarantee that physical hardware is allocated exclusively to one customer and not shared.
From CompTIA A+ 220-1101 Official Study Guide, Objective 3.7 - Cloud deployment models:
"Dedicated resources ensure data isolation at the hardware level for compliance and security." Verified Source:
* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 3: Cloud Deployment
* CompTIA Exam Objectives 220-1101, Domain 3.7

NEW QUESTION # 199
Which of the following is an isolated virtual machine?

- A. Hypervisor
- B. VDI
- C. Sandbox
- D. Container

Answer: C

Explanation:
A sandbox is an isolated virtual environment, often used for testing code or software safely without affecting the host system.
From CompTIA A+ 220-1101 Official Study Guide, Objective 3.7 - Virtualization:
"A sandbox provides an isolated environment, often implemented as a virtual machine, to safely test applications or code." Verified Source:
* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 3: Virtualization
* CompTIA Exam Objectives 220-1101, Domain 3.7

NEW QUESTION # 200
......

CramPDF is a professional website. It focuses on the most advanced CompTIA 220-1201 for the majority of candidates. With CramPDF, you no longer need to worry about the CompTIA 220-1201 exam. CramPDF exam questions have good quality and good service. As long as you choose CramPDF, CramPDF will be able to help you pass the exam, and allow you to achieve a high level of efficiency in a short time.

220-1201 Pdf Version: https://www.crampdf.com/220-1201-exam-prep-dumps.html

Just enroll in the CompTIA A+ Certification Exam: Core 1 220-1201 exam and start preparation with CompTIA A+ Certification Exam: Core 1 220-1201 exam dumps, In addition, we offer you free update for 365 days after payment, and the latest version for 220-1201 training materials will be sent to your email automatically, 220-1201 exam materials are high-quality, and you can pass the exam by using the materials of us, Knowing that you need both practice and confidence to clear the CompTIA 220-1201 exam, we have designed two distinct components that make up our 220-1201 product.

Creating a project and adding existing code to the project, Inserting nonweb file types, Just enroll in the CompTIA A+ Certification Exam: Core 1 220-1201 exam and start preparation with CompTIA A+ Certification Exam: Core 1 220-1201 exam dumps.
