It also shows their commitment to staying up-to-date with the latest technologies and best practices in the industry.

Salesforce Certified B2C Commerce Architect Sample Questions (Q44-Q49):

NEW QUESTION # 44

The Client has implemented a different category/search layout for mobile and desktop. The code uses a session attribute called

deviceType to choose the corresponding layout. This attribute is populated from the browser user agent. After this implementation they have run into these problems:

* Sometimes desktop pages are being served to both desktop and mobile customers.

* Sometimes mobile pages are being served to both desktop and mobile customers.

The page has caching implemented that depends on promotions. SEC is very important and the site traffic is high.

Which solution should the Architect select to resolve the issue without impacting the existing requirements?

- A. Disable caching for these pages to ensure that the correct template is used to render the mobile and desktop pages.
- B. Create customer groups for desktop and mobile users and empty promotions linked to these groups to ensure different cached versions of the page.
- **C. Create customer groups for desktop and mobile users and use remote includes based on these groups to render the mobile and desktop pages**
- D. Change the URL structure to include desktop and mobile as URL parameters to ensure different cached versions of the page

Answer: C

NEW QUESTION # 45

The Client wants to offer custom made container products on its new B2C Commerce storefront. The Client provided two business requirements.

* Customer can specify container length, width, and height.

* Customer can specify the material that the container is made of.

The Client also provided the Architect a current data schema (shown below) for reference while preparing the technical documentation.

Which two gaps between the requirements and the data schema should the Architect discuss with the Client?

Choose 2 answers

- **A. The data schema includes a material Price_Markup field, but there isn't a business requirement to factor the material cost into the final price calculation.**
- B. The data schema includes an implied structure that the customer's choices should be captured as custom objects, but there isn't a business requirement to do so
- C. The data schema includes unique identifiers for material and color fields, but neither are reflected in the business requirements.
- **D. The data schema includes a Color_ID field, but there isn't a business requirement to allow the customer to specify container color.**

Answer: A,D

NEW QUESTION # 46

Northern Trail Outfitters (NTO) wants to migrate its online shop from a custom ecommerce platform to B2C Commerce. NTO needs to migrate several thousands of customer records (profile information, address book).

NTO can provide a B2C Commerce feed. It is currently using SHA-256 as an encryption mechanism for the customer passwords.

What approach can the Architect propose?

- A. Do not import customer records and ask customers to create new accounts the first time they try to log in to the B2C Commerce storefront.
- B. Import the customer records, excluding the password field, and B2C Commerce will automatically require a password reset the first time a customer logs in to the storefront.
- **C. Import the customer records, with the hashed password as a custom attribute, and during the login compare the entered password with the hashed password and save it in the password field.**
- D. Import the customer records, including the hashed password, as B2C Commerce supports SHA-256, and they will be able to login with their existing password.

Answer: C

NEW QUESTION # 47

An ecommerce site has dynamic shipping cost calculation. It allows the customers to see their potential shipping costs on the Product

Detail Page before adding an item to the cart.

For this feature, shipping costs are calculated using the following logic:

- * Set the shipping method on the Basket
- * Add the item to the basket, calculate the basket total and get the shipping cost for this method
- * Remove the item from the Basket to restore the original state
- * The above process is repeated for each shipping method

During the testing it was discovered that the above code violates the `spi.basket.addResolveInSameRequest` quota.

What should the Architect do to resolve this issue and maintain the business requirement?

- A. Wrap each Individual step of the process its own transaction Instead of using one transaction for all steps.
- B. Omit the removal of the Item and speed up the process for the customer by adding the product to the basket for them.
- C. Omit the calculation of shipping cost until the customer is ready to check out and has chosen the shipping method they want to
- **D. Wrap the adding of product and shipping cost calculation in a transaction which Is then rolled back to restore the original state**

Answer: D

Explanation:

To resolve the issue of violating the `spi.basket.addResolveInSameRequest` quota and to maintain the functionality of dynamically calculating shipping costs for items before they are added to the basket, the best approach is:

Option D: Wrapping the adding of product and shipping cost calculation in a transaction, which is then rolled back to restore the original state. This method ensures that the system can calculate potential shipping costs without permanently altering the state of the basket. This approach keeps the basket's original state intact while allowing for multiple shipping calculations, effectively managing the load on system resources and adhering to platform quotas.

NEW QUESTION # 48

To integrate a new payment method with your storefront the 3rd party provider shares with you the endpoints, protocols and needed credentials. After reading all documentation received you realize that they work under SOAP 1.1 protocol. Under which folder in your cartridge structure you should place the needed files?

- A. `/webreferences2`
- B. `/scripts/soap`
- **C. `/webreferences`**
- D. `/services`

Answer: C
