Free PDF Quiz Juniper - JN0-105 - Junos, Associate (JNCIA-Junos) – Reliable Customized Lab Simulation

Our JN0-105 learning materials are new but increasingly popular choices these days which incorporate the newest information and the most professional knowledge of the practice exam. All points of questions required are compiled into our JN0-105 Preparation quiz by experts. By the way, the JN0-105 certificate is of great importance for your future and education. Our JN0-105 practice materials cover all the following topics for your reference.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 2	Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Topic 3	• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 4	• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 5	• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.
Topic 6	• Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q67-Q72):

NEW QUESTION # 67

Click the Exhibit button.

Referring the exhibit, what does the highlighted number indicate?

- A. hop count is 5
- B. route preference is 5
- C. cost is 5
- D. metric is 5

Answer: B

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 68

You want to redeploy a Junos device by clearing the existing configuration and resetting it to factory defaults. In this scenario, which command would help to accomplish this task?

- A. request systemstorage cleanup
- B. request systemstorage cleanup dry-run
- C. request systemzeroize media
- D. show system storage

Answer: C

Explanation:

The `request system zeroize media` command on a Junos device securely erases all data, including configuration and log files, and resets the device to its factory default settings. This command is used when redeploying a device to ensure no residual data remains from its previous deployment. It's a comprehensive and secure way to clear all configurations and data, making the device as if it were new. The other commands listed do not perform a full reset to factory defaults; for example, `show system storage` displays storage information, and `request system storage cleanup` offers to delete unnecessary files without resetting the device to factory settings.

NEW QUESTION # 69

You configured your system authentication order using the `set authentication-order tacplus radius password` command. Which statement is correct in this scenario?

- A. The password authentication will only be used if the TACACS+ and RADIUS servers fail to respond.
- B. A rejection by TACACS+ will prevent a login and bypass the other two authentication methods.

- C. All authentication methods are used with the most restrictive permission set used.
- D. The password authentication method is evaluated if the TACACS+ and RADIUS servers respond with a reject message.

Answer: A

Explanation:

In the scenario where the system authentication order is set to "tacplus radius password," the correct statement is (B). If the TACACS+ and RADIUS servers are unreachable or fail to respond, the system will fall back to using password authentication. This ensures that users can still authenticate using locally stored passwords if external authentication servers are unavailable.

NEW QUESTION # 70

Exhibit

```
user@router> show route 192.168.100.2
```

```
inet.O: 15 destinations, 17 routes (15 active, 0 holddown, 0 hidden) Limit/Threshold: 1048576/1048576 destinations
```

```
+ = Active Route, - = Last Active, * = Both 192.168.100.2/32*[OSPF/IO] 00:14:29, metric 1
```

```
> to 172.16.1.6 via ge-0/0/1.0 [BGP/170] 00:06:49, localpref 100
```

```
AS path: 65102 I, validation-state: unverified > to 172.16.1.6 via ge-0/0/1.0 Referring to the exhibit, which statement is correct?
```

- **A. The OSPF path is the only active route.**
- B. The BGP route is preferred over the OSPF route.
- C. The BGP path is the only active route.
- D. / Traffic is load-balanced across two routes.

Answer: A

Explanation:

Referring to the exhibit, the presence of the "+" symbol next to the OSPF route for 192.168.100.2/32 indicates that this is the active route being used to forward traffic. The BGP route, although present, does not have the "+" symbol, indicating it is not the active route. In Junos OS, the routing table displays the active route with a "+" symbol, and the fact that the OSPF route has this symbol means it is the preferred path based on the routing protocol's decision process, which takes into account factors such as route preference (administrative distance) and metrics.

NEW QUESTION # 71

Which command modifier would you use to see all possible completions for a specific command?

- **A. ?**
- B. |
- C. extensive
- D. detail

Answer: A

Explanation:

In Junos OS, the ? command modifier is used to display all possible completions for a specific command. This helps users understand the available options and syntax for a command they are trying to use.

Reference: Juniper Networks CLI Documentation

"Use the ? command modifier to display all possible completions for a specific command."

NEW QUESTION # 72

.....

Our JN0-105 exam simulation is accumulation of knowledge about the exam strictly based on the syllabus of the exam. They give users access to information and exam, offering simulative testing environment when you participate it like in the classroom. Besides, contents of JN0-105 study guide are selected by experts which are appropriate for your practice in day-to-day life. It is especially advantageous for busy workers who lack of sufficient time to use for passing the JN0-105 Preparation materials. And as the high pass rate of more than 98%, you will pass for sure with it.
