computing concepts and technologies. CompTIA Cloud Essentials+ Certification Exam certification is recognized globally and is considered a valuable asset for IT professionals. It is an excellent way for individuals to demonstrate their expertise in cloud computing and to advance their careers in this rapidly growing field.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q223-Q228):

NEW QUESTION # 223
An IT team documented the procedure for upgrading an existing IT resource within the cloud.
Which of the following BEST describes this procedure?

- A. Incident management
- B. Change management
- C. Standard operating procedure
- D. Security procedure

Answer: C

NEW QUESTION # 224
The installation of a critical patch resulted in server downtime. The patch was not tested prior to going to production, and all servers were restored from backup. Which of the following will reduce the likelihood of this occurring again?

- A. Communication plan
- B. Change management
- C. Access/control policies
- D. Security incident response

Answer: B

Explanation:
Change management is a process that ensures any changes to the system, such as installing patches, are properly planned, tested, and implemented in a controlled environment before being applied to production. This includes testing patches in a staging environment, scheduling changes during off-peak hours, and ensuring proper rollback plans are in place. Implementing a strong change management process would significantly reduce the risk of untested patches causing server downtime in the future.

NEW QUESTION # 225
All of the following are important design decisions when deploying SaaS EXCEPT:

- A. Where or by whom will digital identities be issued for logging on to the application.
- B. How the application will be integrated with other applications.
- C. How existing company data is integrated in or migrated to the application.
- D. The number of users that will access the application simultaneously

Answer: D

NEW QUESTION # 226
Which of the following is an example of multifactor authentication?

- A. A short message service (SMS) message sent to a phone and an access PIN
- B. Encryption of cached password information and a challenge Question:
- C. A password policy that requires both upper and lowercase letters
- D. A password that expires after 90 days and a PIN

Answer: A

NEW QUESTION # 227

A security policy states all user actions in a new cloud infrastructure must be tracked. Which of the following will meet this security requirement?

- A. Encryption
- B. Sanitization
- C. Auditing
- D. Hardening

Answer: C

Explanation:
Auditing involves tracking and recording user actions and activities within a system, ensuring that all interactions with the infrastructure are logged and can be reviewed for security or compliance purposes. This aligns with the security policy that requires tracking all user actions in the cloud infrastructure.

NEW QUESTION # 228
