Exam CISSP Questions | Reliable CISSP Dumps Sheet

Thanks to modern technology, learning online gives people access to a wider range of knowledge, and people have got used to convenience of electronic equipment. As you can see, we are selling our CISSP learning guide in the international market, thus there are three different versions of our CISSP exam materials which are prepared to cater the different demands of various people. We

here promise you that our CISSP Certification material is the best in the market, which can definitely exert positive effect on your study. Our Certified Information Systems Security Professional (CISSP) learn tool create a kind of relaxing leaning atmosphere that improve the quality as well as the efficiency, on one hand provide conveniences, on the other hand offer great flexibility and mobility for our customers. That's the reason why you should choose us.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q589-Q594):

NEW QUESTION # 589

What size is an MD5 message digest (hash)?

- A. 160 bits
- B. 128 bytes
- C. 256 bits
- D. 128 bits

Answer: D

Explanation:

MD5 is a one-way hash function producing a 128-bit message digest from the input message, through 4 rounds of transformation. MD5 is specified as an Internet Standard (RFC1312).

NEW QUESTION # 590

Which Hyper Text Markup Language 5 (HTML5) option presents a security challenge for network data leakage prevention and/or monitoring?

- A. Cross Origin Resource Sharing (CORS)
- B. WebSockets
- C. Web Interface Definition Language (IDL)
- D. Document Object Model (DOM) trees

Answer: B

NEW QUESTION # 591

Which of the following is often the greatest challenge of distributed computing solutions?

- A. security
- B. usability
- C. heterogeneity
- D. scalability

Answer: A

Explanation:

The correct answer to this "security". It is a major factor in deciding if a centralized or decentralized environment is more appropriate.

Example: In a centralized computing environment, you have a central server and workstations (often "dumb terminals") access applications, data, and everything else from that central servers. Therefore, the vast majority of your security resides on a centrally managed server. In a decentralized (or distributed) environment, you have a collection of PC's each with their own operating systems to maintain, their own software to maintain, local data storage requiring protection and backup. You may also have PDA's and "smart phones", data watches, USB devices of all types able to store data... the list gets longer all the time.

It is entirely possible to reach a reasonable and acceptable level of security in a distributed environment. But doing so is significantly more difficult, requiring more effort, more money, and more time.

The other answers are not correct because:

scalability - A distributed computing environment is almost infinitely scalable. Much more so than a centralized environment. This is

therefore a bad answer.

heterogeneity - Having products and systems from multiple vendors in a distributed environment is significantly easier than in a centralized environment. This would not be a

"challenge of distributed computing solutions" and so is not a good answer.

usability - This is potentially a challenge in either environment, but whether or not this is a problem has very little to do with whether it is a centralized or distributed environment.

Therefore, this would not be a good answer.

NEW QUESTION # 592

A security consultant has been asked to research an organization's legal obligations to protect privacy-related information. What kind of reading material is MOST relevant to this project?

- A. Organizational procedures designed to protect privacy information
- B. Privacy best practices published by recognized security standards organizations
- C. Privacy-related regulations enforced by governing bodies applicable to the organization
- D. The organization's current security policies concerning privacy issues

Answer: C

NEW QUESTION # 593

The European Union (EU) has enacted a Conditional Access Directive (CAD) that addresses which of the following?

- A. Access to and use of copyrighted material
- B. Reverse engineering
- C. Use of copyrighted material by libraries
- D. Unauthorized access to Internet subscription sites and pay TV services

Answer: D

Explanation:

The focus of the CAD is on access to services as opposed to access

to works. As of this writing, the EU is discussing a directive focusing on copyrights, but it has not been finalized. It is anticipated that this directive will be similar to the US DMCA (Question 7).

The other answers are copyright issues that will be addressed by the EU Copyright Directive or by other related directives.

NEW QUESTION # 594

.....

As everybody knows, the most crucial matter is the quality of CISSP study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best CISSP Exam Questions for your study to pass it.
