## Interactive Cisco 200-201 Practice Test Engine Online

You can find that there are three versions of the 200-201 training questions: the PDF, Software and APP online. As you If you have more time at home, you can use the Software version of 200-201 exam materials. If you are a person who likes to take notes, you can choose the PDF version. You can print out the PDF version of 200-201 Practice Engine, carry it with you and read it at any time. If you are used to reading on a mobile phone, you can use our APP version.

Cisco 200-201 exam covers a wide range of topics, including security concepts, network security, endpoint protection, threat analysis, incident response, and vulnerability management. 200-201 Exam consists of 60-70 questions and candidates have 90

minutes to complete it. To pass the exam, candidates must score at least 750 out of 1000 points.

## **Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q476-Q481):**

### **NEW QUESTION # 476**

An engineer must compare NIST vs ISO frameworks. The engineer decided to compare as readable documentation and also to watch a comparison video review. Using Windows 10 OS, the engineer started a browser and searched for a NIST document and then opened a new tab in the same browser and searched for an ISO document for comparison. The engineer tried to watch the video, but there was an audio problem with OS so the engineer had to troubleshoot it. At first the engineer started CMD and looked for a driver path then looked for a corresponding registry in the registry editor. The engineer enabled "Audiosrv" in task manager and put it on auto start and the problem was solved. Which two components of the OS did the engineer touch? (Choose two)

- A. permissions
- B. service
- C. process and thread
- D. MBR
- E. PowerShell logs

**Answer: A,B**

### **NEW QUESTION # 477**

An engineer is working with the compliance teams to identify the data passing through the network. During analysis, the engineer informs the compliance team that external perimeter data flows contain records, writings, and artwork. Internal segregated network flows contain the customer choices by gender, addresses, and product preferences by age. The engineer must identify protected data. Which two types of data must be identified? (Choose two.)

- A. PCI
- B. PII
- C. PHI
- D. copyright
- E. SOX

**Answer: B,C**

Explanation:

Protected data refers to any information that can be used on its own or with other information to identify, contact, or locate a single person, or to identify an individual in context. In the scenario described, the engineer must identify data that is considered protected under privacy laws and regulations. Personal Identifiable Information (PII) and Protected Health Information (PHI) are two types of data that are considered protected.

PII includes any data that could potentially identify a specific individual, such as addresses and gender. PHI refers to any information about health status, provision of health care, or payment for health care that can be linked to an individual. This is what makes both PII and PHI crucial to be identified and protected in compliance with data protection regulations.

### **NEW QUESTION # 478**

Refer to the exhibit.

□ A workstation downloads a malicious docx file from the Internet and a copy is sent to FTDv. The FTDv sends the file hash to FMC and the file event is recorded. What would have occurred with stronger data visibility.

- A. An extra level of security would have been in place
- B. The traffic would have been monitored at any segment in the network.
- C. Malicious traffic would have been blocked on multiple devices
- D. Detailed information about the data in real time would have been provided

**Answer: D**

#### Explanation:

With stronger data visibility, detailed information about the data in real-time is provided. This enhanced visibility allows for a more comprehensive analysis of network traffic, enabling security professionals to identify and mitigate threats more effectively. References = Cisco Cybersecurity Operations Fundamentals

#### NEW QUESTION # 479

Drag and drop the elements from the left into the correct order for incident handling on the right.

□

#### Answer:

#### Explanation:

□

#### NEW QUESTION # 480

What specific type of analysis is assigning values to the scenario to see expected outcomes?

- A. probabilistic
- **B. deterministic**
- C. descriptive
- D. exploratory

#### Answer: B

#### Explanation:

This type of analysis is deterministic because it assigns fixed values to the scenario and calculates the expected outcomes based on those values. Deterministic analysis does not account for uncertainty or randomness in the scenario. References:
