完璧なIdentity-and-Access-Management-Architectテストサンプル問題一回合格-高品質なIdentity-and-Access-Management-Architect学習資料

Identity-and-Access-Management-Architect練習教材を購入したすべての学生は、SalesforceのIdentity-and-Access-Management-Architect学習教材が提供する内容に従い、毎日学習する限り、プロのIdentity-and-Access-Management-Architect資格試験に合格できると信じています。模擬試験を通じて定期的に自己検査を実施します。もちろん、ShikenPASS購入する前に、Identity-and-Access-Management-Architect学習教材は無料の試用サービスを提供します。当社のWebサイトにログインしている限り、無料で試用版のSalesforce Certified Identity and Access Management Architect質問バンクをダウンロードできます。Identity-and-Access-Management-Architectテストエンジンを試した後、あなたはそれらを楽しむことになるかと信じています。

Salesforce認定IDおよびアクセス管理アーキテクトの認定試験を受講するには、個人がSalesforceのIAMアーキテクチャとその関連技術を確実に理解する必要があります。また、組織向けのIAMソリューションの設計と実装の経験も必要です。この認定により、専門家は自分の専門知識を実証し、雇用市場で差別化することができます。

Salesforce Certified Identity and Access Management Architect 認定 Identity-and-Access-Management-Architect 試験問題 (Q179-Q184):

質問 # 179

Universal Containers has multiple Salesforce instances where users receive emails from different instances.

Users should be logged into the correct Salesforce instance authenticated by their IdP when clicking on an email link to a Salesforce record.

What should be enabled in Salesforce as a prerequisite?

- A. Identity Provider
- B. External Identity
- C. My Domain
- D. Multi-Factor Authentication

正解: C

質問 # 180

Universal containers (UC) has implemented SAML -based single Sign-on for their salesforce application. UC is using PingFederate as the Identity provider. To access salesforce, Users usually navigate to a bookmarked link to my domain URL. What type of single Sign-on is this?

- A. Sp-Initiated
- B. Web server flow.
- C. IDP-initiated
- D. IDP-initiated with deep linking

正解: A

解説:

The type of single sign-on that UC is using is SP-initiated, which means that the service provider (Salesforce) initiates the SSO process by sending a SAML request to the identity provider (PingFederate) when the user navigates to the My Domain URL. Therefore, option A is the correct answer. References: SAML SSO with Salesforce as the Service Provider

質問 # 181

Universal Containers (UC) currently uses Salesforce Sales Cloud and an external billing application. Both Salesforce and the billing application are accessed several times a day to manage customers. UC would like to configure single sign-on and leverage Salesforce as the identity provider. Additionally, UC would like the billing application to be accessible from Salesforce. A redirect is acceptable. Which two Salesforce tools should an identity architect recommend to satisfy the requirements?

Choose 2 answers

- A. Connected Apps
- B. salesforce Canvas
- C. Identity Connect
- D. App Launcher

正解: B、D

解説:

Salesforce Canvas is a tool that allows external applications to be embedded into Salesforce as iframes, which can provide a seamless user experience. App Launcher is a feature that allows users to access connected apps from a single location in Salesforce. To enable single sign-on and use Salesforce as the identity provider, the external billing application needs to be configured as a connected app and use an OAuth 2.0 or SAML protocol. Identity Connect is not relevant for this scenario, as it is a tool for synchronizing user data between Salesforce and Active Directory. References: Salesforce Canvas Developer Guide, App Launcher, Connected Apps

質問 # 182

Universal Containers (UC) has decided to replace the homegrown customer portal with Salesforce Experience Cloud. UC will continue to use its third-party single sign-on (SSO) solution that stores all of its customer and partner credentials. The first time a customer logs in to the Experience Cloud site through SSO, a user record needs to be created automatically. Which solution should an identity architect recommend in order to automatically provision users in Salesforce upon login?

- A. Third-party AppExchange solution
- B. Custom login flow and Apex handler
- C. Custom middleware and web services
- **D. Just-in-Time (JIT) provisioning**

正解: D

解説:

Just-in-Time (JIT) provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider. This eliminates the need for manual or batch user provisioning in Salesforce. References: Just-in-Time Provisioning for SAML and OpenID Connect, Identity 101: Design Patterns for Access Management

質問 # 183

Universal Containers (UC) is concerned that having a self-registration page will provide a means for "bots" or unintended audiences to create user records, thereby consuming licences and adding dirty data. Which two actions should UC take to prevent unauthorised form submissions during the self-registration process? Choose 2 answers

- A. Use open-ended security questions and complex password requirements
- **B. Use hidden fields populated via java script events in the self-registration page.**
- **C. Require a captcha at the end of the self-registration process.**
- D. Primarily use lookup and picklist fields on the self registration page.

正解: B、C

質問 # 184
