010-160 Study Materials, Exam 010-160 Reference

As a top selling product in the market, our 010-160 study guide has many fans. They are keen to try our newest version products even if they have passed the 010-160 exam. They never give up learning new things. Every time they try our new version of the 010-160 Real Exam, they will write down their feelings and guidance. Also, they will exchange ideas with other customers. And in such a

way, we can develop our 010-160 practice engine to the best according to their requirements.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q58-Q63):

NEW QUESTION # 58

Which command displays file names only and no additional information?

- A. ls -alh
- B. ls -a
- C. ls -nl
- D. ls -lh
- E. ls -l

Answer: B

Explanation:

The ls command is used to list the files and directories in a given path. By default, the ls command displays only the file names, without any additional information. However, the ls command can also take various options to modify its output. For example, the -l option tells ls to display the long format, which includes the file permissions, owner, group, size, date, and name. The -h option tells ls to display the file sizes in a human-readable format, such as KB, MB, GB, etc. The -a option tells ls to display all files, including the hidden ones that start with a dot (.). The -n option tells ls to display the numeric user ID and group ID instead of the user name and group name. Therefore, the only option that does not add any additional information to the file names is the -a option. The command ls -a will display all the file names in the current directory, including the hidden ones, but nothing else. Reference:

NEW QUESTION # 59

The file script.sh in the current directory contains the following content:

```
#!/bin/bash echo $MYVAR
```

The following commands are used to execute this script:

```
MYVAR=value
```

```
./script.sh
```

The result is an empty line instead of the content of the variable MYVAR. How should MYVAR be set in order to make script.sh display the content of MYVAR?

- A. \$MYVAR=value
- B. !MYVAR=value
- C. export MYVAR=value
- D. env MYVAR=value
- E. MYVAR=value

Answer: C

NEW QUESTION # 60

A new server needs to be installed to host services for a period of several years. Throughout this time, the server should receive important security updates from its Linux distribution.

Which of the following Linux distributions meet these requirements? (Choose two.)

- A. Red Hat Enterprise Linux
- B. Debian GNU/Linux Unstable
- C. Ubuntu Linux non-LTS
- D. Ubuntu Linux LTS
- E. Fedora Linux

Answer: A,D

Explanation:

Explanation

Ubuntu Linux LTS and Red Hat Enterprise Linux are two Linux distributions that meet the requirements of hosting services for a period of several years and receiving important security updates from their Linux distribution. LTS stands for Long Term Support, which means that these versions of Ubuntu Linux are supported by Canonical, the company behind Ubuntu, for five years with security patches, bug fixes, and software updates¹. Red Hat Enterprise Linux is a commercial Linux distribution that offers a stable and secure platform for enterprise applications, with a 10-year life cycle and regular security updates from Red Hat, the company behind RHEL². Fedora Linux, Debian GNU/Linux Unstable, and Ubuntu Linux non-LTS are not suitable for the requirements, because they have shorter support cycles and are more focused on providing the latest features and software versions, rather than stability and security. Fedora Linux releases a new version every six months and each version is supported for 13 months³. Debian GNU/Linux Unstable is the development branch of Debian, which is constantly updated with new packages and changes, but is not intended for production use⁴. Ubuntu Linux non-LTS releases a new version every six months and each version is supported for nine months¹. References:

NEW QUESTION # 61

Which of the following commands will search for the filefoo.txtunder the directory/home?

- A. find /home -name foo.txt
- B. find /home - file foo.txt
- C. search/home foo. txt
- D. search /home -file foo.txt
- E. find /home foo.txt

Answer: A

NEW QUESTION # 62

Reverse DNS assigns hostnames to IP addresses. How is the name of the IP address 198.51.100.165 stored on a DNS server?

- A. In the RNAME record for 198-51-100-165.rev.arpa.
- B. In the A record for 165.100.51.198.ipv4.arpa.
- C. In the ARPA record for 165.100.51.198.rev.
- D. In the PTR record for 165.100.51.198.in-addr.arpa.
- E. In the REV record for arpa.in-addr.198.51.100.165.

Answer: D

NEW QUESTION # 63

.....

VCE4Dumps are stable and reliable exam questions provider for person who need them for their exam. We have been staying and growing in the market for a long time, and we will be here all the time, because the excellent quality and high pass rate of our 010-160 Exam Questions. As for the safe environment and effective product, there are thousands of candidates are willing to choose our 010-160 study question, why don't you have a try for our study question, never let you down!
