## Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Connectivity and Security:</b> This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>NGFW and SASE Solution Functionality:</b> This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>GFW and SASE Solution Maintenance and Configuration:</b> This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.</li> </ul>

## Quiz 2026 Fantastic Palo Alto Networks NetSec-Pro: Palo Alto Networks Network Security Professional Test Study Guide

The Palo Alto Networks NetSec-Pro practice tests on this software will allow you to self-assess your progress. It also allows you to schedule your Palo Alto Networks NetSec-Pro practice exam. It imitates the actual pattern of the NetSec-Pro Exam. This format works on Windows-based devices and requires no internet connection. The dedicated support team works hard to resolve any problem at any time.

### Palo Alto Networks Network Security Professional Sample Questions (Q11-Q16):

#### NEW QUESTION # 11

In a service provider environment, what key advantage does implementing virtual systems provide for managing multiple customer environments?

- A. Logical separation of control and Security policy
- B. Centralized authentication for all customer domains
- C. Unified logging across all virtual systems
- D. Shared threat prevention policies across all tenants

**Answer: A**

Explanation:

Virtual systems provide logical separation in a single physical firewall, allowing different customers (or tenants) to have isolated control and security policies.

"Virtual systems enable service providers to offer logically separated, independent environments on a single firewall. Each virtual system can have its own security policies, interfaces, and administrators." (Source: Virtual Systems) This ensures secure, tenant-specific segmentation within multi-tenant environments.

#### NEW QUESTION # 12

Which method in the WildFire analysis report detonates unknown submissions to provide visibility into real-world effects and behavior?

- A. Machine learning (ML)
- B. Static analysis
- **C. Dynamic analysis**
- D. Intelligent Run-time Memory Analysis

**Answer: C**

Explanation:

Dynamic analysis in WildFire refers to executing unknown files in a controlled environment (sandbox) to observe their real-world behavior. This allows the firewall to detect zero-day threats and advanced malware by directly analyzing the file's impact on a system.

WildFire dynamic analysis detonates unknown files in a secure sandbox environment, analyzing real-world effects, behaviors, and potential malicious activity.

### NEW QUESTION # 13

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- B. Deploy a service connection for each branch site and connect with SCM.
- **C. Install a device certificate.**
- **D. Configure NTP and DNS servers for the firewall.**

**Answer: C,D**

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity: Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

"To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com." (Source: SCM Onboarding Requirements) Install a device certificate A device certificate authenticates the firewall's identity when connecting to SCM.

"The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity." (Source: Device Certificates) These steps ensure trust, secure communication, and successful onboarding into SCM.

### NEW QUESTION # 14

An administrator wants to implement additional Cloud-Delivered Security Services (CDSS) on a data center NGFW that already has one enabled. What benefit does the NGFW's single-pass parallel processing (SP3) architecture provide?

- **A. There will be only a minor reduction in performance.**
- B. There will be no additional performance degradation.
- C. It allows for traffic inspection at the application level.
- D. It allows additional security inspection devices to be added inline.

**Answer: A**

Explanation:

The SP3 architecture of Palo Alto NGFWs ensures that additional security services (CDSS) only cause a minor reduction in performance, as traffic is inspected once in a single pass.

The single-pass parallel processing (SP3) architecture performs application identification and security enforcement simultaneously in one pass, resulting in only minor performance impacts when enabling multiple security services.

Unlike traditional multi-pass engines, SP3 architecture optimizes performance while delivering comprehensive security.

### NEW QUESTION # 15

Which feature of SaaS Security will allow a firewall administrator to identify unknown SaaS applications in an environment?

- A. App-ID
- B. SaaS Data Security
- **C. App-ID Cloud Engine**
- D. Cloud Identity Engine

**Answer: C**

Explanation:

App-ID Cloud Engine (ACE) in SaaS Security uses cloud-based signatures to detect unknown and unsanctioned SaaS applications in the environment.

"App-ID Cloud Engine (ACE) uses real-time cloud intelligence to identify SaaS applications, including previously unknown or newly introduced applications." (Source: ACE for SaaS Visibility) This feature is key for comprehensive SaaS visibility beyond static signatures.
