Itexamdump는 IT인증자격증을 취득하려는 IT업계 인사들의 검증으로 크나큰 인지도를 가지게 되었습니다. 믿고 애용해주신 분들께 감사의 인사를 드립니다. UiPath UiPath-ADPv1덤프도 다른 과목 덤프자료처럼 적응을 좋고 통과율이 장난이 아닙니다. 덤프를 구매하시면 퍼펙트한 구매후 서비스까지 제공해드려 고객님의 보유한 덤프가 항상 시장에서 가장 최신버전임을 약속해드립니다. UiPath UiPath-ADPv1덤프만 구매하신다면 자격증 취득이 쉬워져 고객님의 밝은 미래를 예약한것과 같습니다.

UiPath UiPath-ADPv1 시험요강:

주제	소개
주제 1	UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
주제 2	Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.
주제 3	Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
주제 4	UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

UiPath-ADPv1높은 통과율 인기 시험자료 최신버전 덤프문제 다운로드

Itexamdump에서 출시한 UiPath인증 UiPath-ADPv1덤프는 실제시험문제 커버율이 높아 시험패스율이 가장 높습니다. UiPath인증 UiPath-ADPv1시험을 통과하여 자격증을 취득하면 여러방면에서 도움이 됩니다. Itexamdump에서 출시한 UiPath인증 UiPath-ADPv1덤프를 구매하여UiPath인증 UiPath-ADPv1시험을 완벽하게 준비하지 않으실래요? Itexamdump의 실력을 증명해드릴게요.

최신 UiPath Certified Professional - Developer Track UiPath-ADPv1 무료샘플문제 (Q80-Q85):

질문 # 80

Considering that the attached table is stored in a variable called "dt":

	A	B	C
1	No.	Item	Quantity
2		1 apple	10
3		2 orange	20
4		3 mango	5
5		4 kiwi	80
6		5 pear	1
7		6 apple	5
8		7 apple	12
9		8 mango	15

Which LINQ query can be used to return the maximum total Quantity?

- A. `dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))("Item")`
- B. `dt.AsEnumerable. Max(Function(x) Convert.ToInt32(x("Quantity").ToString))`
- C. `dt.AsEnumerable. GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.ToInt32(y("Quantity").ToString)))`
- D. `dt.AsEnumerable. OrderByDescending(Function(x) Convert.ToInt32(x("Quantity").ToString)). First.Item("Quantity")`

정답: C

설명:

The LINQ query that can be used to return the maximum total Quantity from the attached table is dt.

`AsEnumerable. GroupBy(Function(x) x("Item").ToString). Max(Function(x) x.Sum(Function(y) Convert.`

`ToInt32(y("Quantity").ToString)))`. This query uses the LINQ methods `AsEnumerable`, `GroupBy`, `Max`, and `Sum` to manipulate the data in the dt variable. The dt variable is a DataTable that contains the following data:

No.

Item

Quantity

1

apple

10

2

orange

20

3

mango

50

4

kiwi

80

5

pear

1

6

apple

5

7

mango

The AsEnumerable method converts the DataTable into an Enumerable collection of DataRow objects. The GroupBy method groups the elements of the collection by the value of the Item column, creating a collection of groups. Each group has a key, which is the Item name, and a list of elements, which are the DataRows that have the same Item value. The Max method returns the maximum value of the collection, based on a selector function. The selector function is a lambda expression that calculates the sum of the Quantity column for each group. The Sum method returns the sum of the elements in a collection, based on a selector function. The selector function is a lambda expression that converts the value of the Quantity column into an integer.

Therefore, the query will group the DataRows by the Item name, calculate the total Quantity for each group, and return the maximum total Quantity among the groups. The maximum total Quantity is 80, which corresponds to the group with the key "kiwi". References: [DataTable.AsEnumerable Method], [Enumerable.

GroupBy Method], [Enumerable.Max Method], [Enumerable.Sum Method]

질문 # 81

Which of the following describes the correct hierarchy of the elements in the Object Repository tree structure?

- A. Screen, Application, Version, UI Element.
- B. Application, Screen, UI Element, Version.
- C. Version, Application, Screen, UI Element.
- D. Application, Version, Screen, UI Element.

정답: B

설명:

The Object Repository in UiPath organizes elements in a hierarchical structure that reflects the logical arrangement of user interfaces and elements as they are captured and used in automation projects.

The correct hierarchy for elements in the Object Repository tree structure is:

A: Version, Application, Screen, UI Element.

This hierarchy starts with the 'Version', which could refer to the specific version of the application you are automating. Under each version, there could be multiple 'Applications' that you have elements for. Within each application, you might have captured various 'Screens' or dialogs, and within each screen, there are individual 'UI Elements' like buttons, text fields, dropdown menus, etc., that the automation interacts with.

However, it's important to note that in practice, when you are working with UiPath Studio and its Object Repository, the hierarchy usually starts with the 'Application', then under it, you have different 'Screens' of the application, and under each screen, you have the 'UI Elements'. The 'Version' is typically managed separately and is not a level in the hierarchy tree but rather a property or attribute of the application or element.

Therefore, the most practical answer reflecting the usage in UiPath Studio would be:

C: Application, Screen, UI Element, Version.

The 'Version' here would be understood not as a layer in the hierarchy but rather as an attribute that can be associated with the 'Application' or 'UI Element'.

질문 # 82

What do the percentages from the Test Explorer panel represent?

- A. Coverage percent.
- B. Correctness of the code percent.
- **C. Passing percent.**
- D. Percent of test data run.

정답: C

설명:

The percentages from the Test Explorer panel represent the passing percent of the test cases that are executed.

The Test Explorer panel shows the status of each test case, the total number of test cases, the number of passed test cases, the number of failed test cases, and the passing percent. The passing percent is calculated by dividing the number of passed test cases by the total number of test cases and multiplying by 100. For example, if there are 10 test cases and 8 of them pass, the passing percent is 80%. References: Test Explorer

질문 # 83

What role do Triggers play in the UiPath Integration Service?

- A. Assist in the creation of automation projects by providing event-based activities.
- **B. Provide a mechanism for subscribing to specific events from third-party applications, automatically starting processes in Orchestrator.**
- C. Provide a mechanism for starting processes on a scheduled basis from Orchestrator.
- D. Manage connections between UiPath Studio and third-party applications.

정답: B

설명:

The role of Triggers in the UiPath Integration Service is to provide a mechanism for subscribing to specific events from third-party applications, automatically starting processes in Orchestrator. The UiPath Integration Service is a cloud-based service that enables seamless integration between UiPath and various external applications, such as Salesforce, ServiceNow, Workday, and more. The Integration Service allows the developer to create Triggers that define the conditions and actions for starting processes in Orchestrator based on events that occur in the external applications. For example, a Trigger can be created to start a process that updates a customer record in UiPath when a case is closed in Salesforce. The Triggers can be configured and managed from the UiPath Integration Service portal or from the UiPath Studio.

질문 # 84

While working in an RPA testing project, you encountered the following activity in one of the workflows included in the project.

What action can you perform in your mocked file to replace the functionality of the MessageBox with a LogMessage during mock testing?

- A. Remove mock activity.
- B. Synchronize mock.
- **C. Surround activity with mock.**
- D. Create mock workflow.

정답: C

설명:

To replace the functionality of the MessageBox with a LogMessage during mock testing, the developer can perform the action of Surround activity with mock. This action inserts a mock activity around the selected activity, which allows the developer to change the behavior of the activity for testing purposes. For example, the developer can right-click on the MessageBox activity and select Surround activity with mock from the dropdown menu. This will create a mock activity that contains the MessageBox activity. The developer can then edit the mock activity and replace the MessageBox activity with a LogMessage activity, which will write the message to the output panel instead of displaying it in a dialog box. This way, the developer can test the functionality of the workflow without having to interact with the MessageBox dialog box. References: [Mock Testing], [Surround Activity with Mock]
