

# IDP Online Version, Reliable IDP Exam Syllabus

You can contact our service any time as long as you have questions on our IDP practice engine. They are available 24-hours for guidance and information to help you solve your problem or confusion on the IDP exam braindumps. And they can also give you the fast and professional help as they are trained to deal with matters with high-efficiency on our IDP learning guide. And if you buy our IDP training materials, you will find you can have it in 5 to 10 minutes.

The CrowdStrike Certified Identity Specialist(CCIS) Exam certification exam is one of the top-rated career advancement IDP certifications in the market. This CrowdStrike Certified Identity Specialist(CCIS) Exam certification exam has been inspiring candidates since its beginning. Over this long period, thousands of CrowdStrike Certified Identity Specialist(CCIS) Exam exam candidates have passed their IDP Certification Exam and now they are doing jobs in the world's top brands.

## Reliable IDP Exam Syllabus, Latest IDP Braindumps Free

To give you an idea about the top features of PassTorrent CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam questions, a free demo of PassTorrent CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam dumps is being offered free of cost. Just download PassTorrent CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam questions demo and checks out the top features of PassTorrent CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam dumps. If you feel that PassTorrent CrowdStrike IDP exam questions work for you then buy the full and final PassTorrent CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam dumps at an affordable price and start CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) exam preparation.

## CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Within Domain Security Overview, what Goal incorporates all risks into one security assessment report?

- A. Privileged User Management
- B. Pen Testing
- C. AD Hygiene
- D. Reduce Attack Surface

**Answer: D**

Explanation:

Within the Domain Security Overview, Goals are used to tailor how identity risks are grouped, evaluated, and reported. The Reduce Attack Surface goal is the only option that incorporates all identity risks into a single, comprehensive security assessment.

The CCIS curriculum explains that Reduce Attack Surface provides a holistic view of identity exposure by aggregating risks related to authentication paths, account hygiene, privileges, misconfigurations, and legacy identity weaknesses. This goal is designed for organizations seeking an overall understanding of their identity security posture rather than focusing on a specific domain such as privileged users or directory hygiene.

Other goals are more specialized:

- \* AD Hygiene focuses on directory configuration issues.
- \* Privileged User Management concentrates on high-privilege identities.
- \* Pen Testing aligns more with adversarial simulation than continuous risk assessment.

Reduce Attack Surface aligns directly with Zero Trust principles, helping organizations identify and eliminate unnecessary identity access paths. Therefore, Option C is the correct and verified answer.

#### NEW QUESTION # 52

Which of the following best describes how Policy Group and Policy Rule precedence works?

- A. There is no precedence with Policy Groups or Policy Rules; they enact policy if the conditions match
- **B. Policy Groups are evaluated in the order in which the groups appear on the page. The Policy Rules within those groups are evaluated in the order in which they appear in the group**
- C. Policy Groups only group Policy Rules together. Precedence is dictated by the Rules
- D. Policy Groups are evaluated in the order in which the groups appear on the page; however, Policy Rules within those groups have no precedence

#### Answer: B

Explanation:

Falcon Identity Protection enforces deterministic policy execution using a clear and predictable precedence model. As outlined in the CCIS curriculum, Policy Groups are evaluated top to bottom, based on their order in the console. Within each Policy Group, Policy Rules are evaluated sequentially, also from top to bottom.

This ordered evaluation ensures consistent enforcement behavior and allows administrators to design layered identity controls. When a rule's conditions are met and an action is executed, subsequent rules may or may not be evaluated depending on rule logic and configuration. This model gives administrators precise control over enforcement priority.

The incorrect options misunderstand how precedence works. Policy enforcement is not unordered, nor are Policy Groups merely visual containers. Both grouping and rule order matter.

This precedence model is critical for avoiding conflicting enforcement actions and aligns with Zero Trust principles by ensuring predictable, auditable identity enforcement. Therefore, Option A is the correct answer.

#### NEW QUESTION # 53

Describe the difference between a Human account and a Programmatic account.

- A. A human account is an Administrator
- B. A programmatic account is only used interactively
- C. A programmatic account is never authorized for multi-factor authentication
- **D. A human account is often used interactively**

#### Answer: D

Explanation:

Falcon Identity Protection differentiates human accounts and programmatic accounts based on authentication behavior, not naming conventions or assigned roles. According to the CCIS curriculum, human accounts are often used interactively, meaning they authenticate through direct user actions such as workstation logins, VPN access, or application access.

Programmatic accounts (such as service accounts) typically authenticate non-interactively, often on a predictable schedule or in response to automated processes. Falcon analyzes authentication frequency, protocol usage, timing, and access patterns to classify account types automatically.

The incorrect options reflect common misconceptions:

- \* Human accounts are not always administrators.
- \* Programmatic accounts can support MFA in some architectures.
- \* Programmatic accounts are not used interactively.

Because interactive authentication behavior is the defining characteristic of human accounts, Option D is the correct and verified answer.

#### NEW QUESTION # 54

How should a user be classified if one requires observation for potential risk to the business?

- A. Honeytoken Account
- B. Marked User
- **C. Watched User**
- D. High Risk

**Answer: C**

Explanation:

Within Falcon Identity Protection, a **Watched User** is a user explicitly designated for heightened monitoring due to potential business risk. According to the CCIS curriculum, watchlists are designed to provide additional visibility into users whose behavior, access level, or role may warrant closer observation, even if they have not yet exhibited confirmed malicious activity.

Watched Users may include executives, administrators, users with access to sensitive systems, or accounts suspected of being targeted. Placing a user on a watchlist does not imply compromise; instead, it ensures their activity is prioritized in investigations, detections, and dashboards.

The other options are incorrect:

- \* Honeytoken Accounts are decoy accounts designed to detect malicious usage.
- \* High Risk is a calculated risk state, not a monitoring classification.
- \* Marked User is not a valid Falcon Identity Protection classification.

Because the CCIS material explicitly identifies **Watched Users** as accounts requiring observation for potential risk, Option C is the correct and verified answer.

**NEW QUESTION # 55**

The Enforce section of Identity Protection is used to:

- **A. Define policy rules that determine what actions to take in response to certain triggers observed in the environment**
- B. Configure domains, appliances, subnets, connectors, risk configuration, and settings
- C. Gain an overview of the domain and indicate whether the domain follows best security practice
- D. View all identity-based detections and identity-based incidents in the environment

**Answer: A**

Explanation:

The Enforce section of Falcon Identity Protection is dedicated to policy-based identity enforcement.

According to the CCIS curriculum, this section allows administrators to define and manage Policy Rules and Policy Groups that specify how the platform should respond when identity-related conditions are detected.

These rules evaluate triggers such as risky authentication behavior, privilege misuse, compromised credentials, or elevated risk scores, and then execute actions like blocking access, enforcing MFA, or initiating Falcon Fusion workflows. Enforce is therefore the execution layer of Falcon's identity security model.

The other options correspond to different sections of the platform:

Configuration tasks are handled in Configure.

Detections and incidents are reviewed in Monitor or Explore.

Domain posture overviews are displayed in Domain Security Overview.

Because Enforce directly controls what actions are taken in response to identity risk, Option B is the correct and verified answer.

**NEW QUESTION # 56**

.....

The PassTorrent is one of the leading CrowdStrike exam preparation study material providers in the market. The PassTorrent offers valid, updated, and real CrowdStrike Certified Identity Specialist(CCIS) Exam exam practice test questions that assist you in your CrowdStrike Certified Identity Specialist(CCIS) Exam exam preparation. The CrowdStrike IDP Exam Questions are designed and verified by experienced and qualified CrowdStrike IDP exam trainers.

**Reliable IDP Exam Syllabus:** <https://www.passtorrent.com/IDP-latest-torrent.html>

Unlike those complex and esoteric materials, our IDP study materials are not only of high quality, but also easy to learn, CrowdStrike IDP Online Version PDF Version is a document of Questions & Answers product in industry standard .pdf file format, which is easily read using Acrobat Reader (free application from Adobe), or many other free readers, including OpenOffice, Foxit Reader and Google Docs, In order to serve you better, we have a complete system if you buying IDP exam bootcamp from us.

The button will only initiate the transition, IDP Another way to create a secure environment is to run operating systems virtually. Unlike those complex and esoteric materials, our IDP Study Materials are not only of high quality, but also easy to learn.

High Pass-Rate IDP Online Version by PassTorrent

PDF Version is a document of Questions & Answers IDP PDF Download product in industry standard .pdf file format, which is easily read using Acrobat Reader (free application from Adobe), IDP Online Version or many other free readers, including OpenOffice, Foxit Reader and Google Docs.

In order to serve you better, we have a complete system if you buying IDP exam bootcamp from us, And we can say that IDP test questions won't give you any unsatisfactory experience.

IDP APP version can support any electronic device without any limit, it also support the offline use.
