Fortinet FCSS_CDS_AR-7.6 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Cloud Infrastructure Monitoring: Cloud Security Engineers are assessed on their ability to monitor cloud networks and workloads using both cloud provider native tools and Fortinet’s monitoring solutions. This section includes overseeing AWS and Azure network health and security posture to ensure continuous visibility and threat detection in cloud environments.
주제 2	<ul style="list-style-type: none"> Security Solutions Deployment and Integration: This section evaluates Cloud Security Engineers on deploying Fortinet solutions to secure various cloud service models, including Infrastructure as a Service (IaaS) and Container as a Service (CaaS). It includes integrating Fortinet security tools with cloud-native services to ensure robust protection across cloud workloads and environments.
주제 3	<ul style="list-style-type: none"> Automation and Deployment Tools: This domain focuses on the skills of DevOps Engineers in automating cloud infrastructure and security deployments. It covers using Infrastructure as Code tools such as Terraform and Ansible for cloud provisioning, as well as deploying Fortinet solutions through platform-specific automation frameworks like Azure Bicep and AWS CloudFormation to enable repeatable and scalable security implementations.
주제 4	<ul style="list-style-type: none"> Troubleshooting and Connectivity Management: Targeting DevOps Engineers, this section focuses on diagnosing and resolving connectivity problems within AWS and Azure cloud services. It emphasizes troubleshooting issues related to cloud network connectivity, including challenges with Software-Defined Networking (SDN) connectors, to maintain stable and secure cloud operations.

최신 Fortinet Certified Solution Specialist FCSS_CDS_AR-7.6 무료샘플문제 (Q23-Q28):

질문 # 23

What is the main advantage of using SD-WAN Transit Gateway Connect over traditional SD- WAN?

- A. You can use BGP over IPsec for maximum throughput.
- **B. You can use GRE-based tunnel attachments.**
- C. It eliminates the use of ECMP.
- D. You can combine it with IPsec to achieve higher bandwidth.

정답: B

설명:

The main advantage of SD-WAN Transit Gateway Connect is that it supports GRE-based tunnel attachments to AWS Transit Gateway. This provides higher throughput and lower overhead compared to traditional VPN (IPsec) connections, making it more efficient for SD-WAN integration.

질문 # 24

What are some key advantages of using Azure Bicep over JSON templates?

(Choose two.)

Response:

- A. Support for multi-cloud deployment
- **B. More readable syntax**
- **C. Reduced code complexity**
- D. Native execution on AWS

정답: B,C

질문 # 25

In the context of Fortinet's integration with cloud-native tools, what does the term "cloud-native" refer to?
Response:

- A. Legacy applications migrated to the cloud
- B. Virtual machines running in data centers
- C. Tools and services built to operate within cloud environments
- D. Applications developed for on-premises deployment

정답: C

질문 # 26

As part of your organization's monitoring plan, you have been tasked with obtaining and analyzing detailed information about the traffic sourced at one of your FortiGate EC2 instances.
What can you do to achieve this goal?

- A. Configure a network access analyzer scope with the EC2 instance as a match finding.
- B. Add the EC2 instance as a target in CloudWatch to collect its traffic logs.
- C. Create a virtual public cloud (VPC) flow log at the network interface level for the EC2 instance.
- D. Use AWS CloudTrail to capture and then examine traffic from the EC2 instance.

정답: C

질문 # 27

You have deployed a FortiGate HA cluster in Azure using a Gateway Load Balancer for traffic inspection. However, traffic is not being routed correctly through the firewalls.
What can be the cause of the issue?

- A. The health probes for the Gateway Load Balancer are failing, which causes traffic to bypass the HA cluster.
- B. The protected VMs are in a different Azure subscription, which prevents the Gateway Load Balancer from forwarding traffic.
- C. The Fortinet VMs have IP forwarding disabled, which is required for traffic inspection.
- D. The Gateway Load Balancer is not associated with the correct network security group (NSG) rules, which allow traffic to pass through.

정답: C

설명:

Azure requires IP forwarding enabled on each FortiGate NIC used for inspection; without it, Azure drops packets that the VM tries to route onward, so traffic won't traverse the HA firewalls.
