Salesforce인증 MuleSoft-Integration-Architect-I시험을 한방에 편하게 통과하여 자격증을 취득하려면 시험전 공부가이드가 필수입니다. ExamPassdump에서 연구제작한 Salesforce인증 MuleSoft-Integration-Architect-I덤프는Salesforce인증 MuleSoft-Integration-Architect-I시험을 패스하는데 가장 좋은 시험준비 공부자료입니다. ExamPassdump덤프공부자료는 엘리트한 IT전문자들이 자신의 노하우와 경험으로 최선을 다해 연구제작한 결과물입니다.IT인증자격증을 취득하려는 분들의 결은ExamPassdump가 지켜드립니다.

Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Section	Weight Objectives
Architecting Resilient and Performant Integration Solutions	20%
Designing Networks and Deploying Applications	15%
Selecting Integration Styles	15%
Handling Events and Messages	15%
Designing and Documenting Enterprise Integration Architecture	20%
Configuring and Provisioning Anypoint Platform	15%

인기자격증 MuleSoft-Integration-Architect-I시험패스 가능한 인증덤프 덤프공부문제

ExamPassdump에서 출시한 Salesforce인증 MuleSoft-Integration-Architect-I덤프는 실제시험문제 커버율이 높아 시험패스율이 가장 높습니다. Salesforce인증 MuleSoft-Integration-Architect-I시험을 통과하여 자격증을 취득하면 여러방면에서 도움이 됩니다. ExamPassdump에서 출시한 Salesforce인증 MuleSoft-Integration-Architect-I덤프를 구매하여Salesforce인증 MuleSoft-Integration-Architect-I시험을 완벽하게 준비하지 않으실래요? ExamPassdump의 실력을 증명해드릴게요.

최신 Salesforce MuleSoft MuleSoft-Integration-Architect-I 무료샘플문제 (Q161-Q166):

질문 # 161

An organization has chosen Mulesoft for their integration and API platform.

According to the Mulesoft catalyst framework, what would an integration architect do to create achievement goals as part of their

business outcomes?

- A. build and publish foundational assets
- **B. agree upon KPI's and help develop and overall success plan**
- C. evangelize API's
- D. Measure the impact of the centre for enablement

정답: B

설명:

According to the MuleSoft Catalyst framework, an Integration Architect plays a crucial role in defining and achieving business outcomes. One of their key responsibilities is to agree upon Key Performance Indicators (KPIs) and help develop an overall success plan. This involves working with stakeholders to identify measurable goals and ensure that the integration initiatives align with the organization's strategic objectives.

KPIs are critical for tracking progress, measuring success, and making data-driven decisions. By agreeing on KPIs and developing a success plan, the Integration Architect ensures that the organization can objectively measure the impact of its integration efforts and adjust strategies as needed to achieve desired business outcomes.

MuleSoft Catalyst Knowledge Hub

질문 # 162

A mule application is being designed to perform product orchestration. The Mule application needs to join together the responses from an inventory API and a Product Sales History API with the least latency.

To minimize the overall latency. What is the most idiomatic (used for its intended purpose) design to call each API request in the Mule application?

- A. Call each API request in a separate Async scope
- **B. Call each API request in a separate route of a Scatter-Gather**
- C. Call each API request in a separate route of a Parallel For Each scope
- D. Call each API request in a separate lookup call from Dataweave reduce operator

정답: B

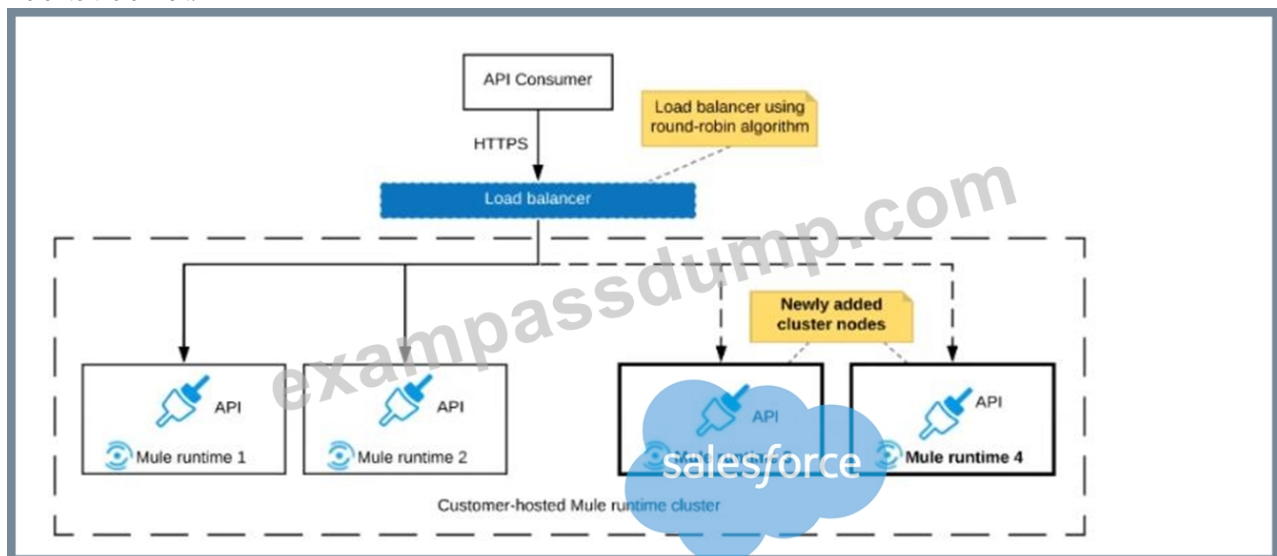

설명:

Scatter-Gather sends a request message to multiple targets concurrently. It collects the responses from all routes, and aggregates them into a single message.

Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

질문 # 163

Refer to the exhibit.

An organization uses a 2-node Mule runtime cluster to host one stateless API implementation. The API is accessed over HTTPS through a load balancer that uses round-robin for load distribution.

Two additional nodes have been added to the cluster and the load balancer has been configured to recognize the new nodes with no other change to the load balancer.

What average performance change is guaranteed to happen, assuming all cluster nodes are fully operational?

- A. 50% reduction In the JVM heap memory consumed by each node
- B. 100% increase in the throughput of the API
- **C. 50% reduction In the number of requests being received by each node**
- D. 50% reduction in the response time of the API

정답: C

질문 # 164

An organization uses a set of customer-hosted Mule runtimes that are managed using the Mulesoft-hosted control plane. What is a condition that can be alerted on from Anypoint Runtime Manager without any custom components or custom coding?

- A. When an SSL certificate used by one of the deployed Mule applications is about to expire
- **B. When a Mule runtime on a given customer-hosted server is experiencing high memory consumption during certain periods**
- C. When the Mule runtime license installed on a Mule runtime is about to expire
- D. When a Mule runtime's customer-hosted server is about to run out of disk space

정답: B

설명:

Correct answer is When a Mule runtime on a given customer-hosted server is experiencing high memory consumption during certain periods Using Anypoint Monitoring, you can configure two different types of alerts: Basic alerts for servers and Mule apps Limit per organization: Up to 50 basic alerts for users who do not have a Titanium subscription to Anypoint Platform You can set up basic alerts to trigger email notifications when a metric you are measuring passes a specified threshold. You can create basic alerts for the following metrics for servers or Mule apps: For on-premises servers and CloudHub apps: * CPU utilization * Memory utilization * Thread count Advanced alerts for graphs in custom dashboards in Anypoint Monitoring.

You must have a Titanium subscription to use this feature. Limit per organization: Up to 20 advanced alerts

질문 # 165

A company is using Mulesoft to develop API's and deploy them to Cloudhub and on premises targets.

Recently it has decided to enable Runtime Fabric deployment option as well and infrastructure is set up for this option.

What can be used to deploy Runtime Fabric?

- A. Directly uploading a jar file from the Runtime manager
- **B. AnypointCLI**
- C. Anypoint platform REST API's
- D. Mule maven plug-in

정답: B

설명:

When deploying to Runtime Fabric, there are several tools available within the Anypoint Platform ecosystem that facilitate the deployment process. These include:

* AnypointCLI: This command-line interface tool provides comprehensive capabilities for deploying applications to Runtime Fabric. Using AnypointCLI, you can script and automate deployments, which is useful for integrating into CI/CD pipelines.

* Anypoint Platform REST APIs: These APIs allow for programmatic deployment and management of applications on Runtime Fabric. They provide flexibility for integrating deployment processes with other systems and tools.

* Mule Maven Plugin: This plugin can be used within a Maven project to package and deploy Mule applications to Runtime Fabric as part of a build process.

However, directly uploading a JAR file from the Runtime Manager is not a supported method for deploying to Runtime Fabric.
