## Huawei HCSE-Presales-Campus Network Planning and Design V1.0 Sample Questions (Q206-Q211):

### NEW QUESTION # 206

When the CloudCampus solution is applied to small or medium-sized campus networks, which description of the access layer design is correct?

- A. When selecting a switch, you need to calculate the number of connected APs \* AP power < the power the POE switch can provide. Therefore, you need to choose a POE switch with an appropriate power supply based on the specific model and number of APs.
- B. For medium-sized supermarkets and general education scenarios with large network scales, a stacked network is recommended for the access layer. When a single access device can meet the access density of downstream terminals, a single-device network can be used at the access layer. When the upstream devices at the access layer use a stacked network, an Eth-Trunk link is recommended to connect the upstream devices. If multiple APs are required for coverage, expand AP access using POE LSW.
- C. Select an appropriate access switch model based on whether PoE support is required and the number of access APs.
- D. For micro-store scenarios where AP coverage is required, APs and egress devices must be deployed in the store. APs cannot be directly connected to egress links and do not support NAT.

Answer: A,B,C

### NEW QUESTION # 207

If an AC has only one interface connected to an aggregation switch, and user traffic flows directly through the aggregation switch to the public network without passing through the AC, which networking mode should be used?
