

# NGFW-Engineer Updated CBT | Detailed NGFW-Engineer Study Plan

BTW, DOWNLOAD part of Lead2PassExam NGFW-Engineer dumps from Cloud Storage: <https://drive.google.com/open?id=12s4HSuRZA-5OnaB3xQkCy9IISUNHQcwP>

The Palo Alto Networks NGFW-Engineer certification exam is not only validate your skills but also prove your expertise. It can prove to your boss that he did not hire you in vain. The current IT industry needs a reliable source of Palo Alto Networks NGFW-Engineer Certification Exam, Lead2PassExam is a good choice. Select Lead2PassExam NGFW-Engineer exam material, so that you do not need yo waste your money and effort. And it will also allow you to have a better future.

## Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active<ul style="list-style-type: none"><li>• active and active</li><li>• passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPsec, quantum-resistant cryptography, and GRE tunnels.</li></ul></li></ul>
Topic 3	<ul style="list-style-type: none"><li>• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.</li></ul>

**Expertly Crafted Online Palo Alto Networks NGFW-Engineer Practice Test Engine**

The most advantage of our NGFW-Engineer exam torrent is to help you save time. It is known to us that time is very important for you. As the saying goes, an inch of time is an inch of gold; time is money. If time be of all things the most precious, wasting of time must be the greatest prodigality. We believe that you will not want to waste your time, and you must want to pass your NGFW-Engineer Exam in a short time, so it is necessary for you to choose our NGFW-Engineer prep torrent as your study tool. If you use our products, you will just need to spend 20-30 hours to take your exam.

## **Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q42-Q47):**

### **NEW QUESTION # 42**

During an upgrade to the routing infrastructure in a customer environment, the network administrator wants to implement Advanced Routing Engine (ARE) on a Palo Alto Networks firewall.

Which firewall models support this configuration?

- A. PA-7050, PA-1420, VM-Series, CN-Series
- B. PA-3260, PA-5410, PA-850, PA-460
- C. PA-455, VM-Series, PA-1410, PA-5450
- **D. PA-5280, PA-7080, PA-3250, VM-Series**

**Answer: D**

### **NEW QUESTION # 43**

Which two statements apply to configuring required security rules when setting up an IPSec tunnel between a Palo Alto Networks firewall and a third- party gateway? (Choose two.)

- A. For incoming and outgoing traffic through the tunnel, creating separate rules for each direction is optional.
- **B. The IKE negotiation and IPSec/ESP packets are denied by default via the interzone default deny policy.**
- **C. For incoming and outgoing traffic through the tunnel, separate rules must be created for each direction.**
- D. The IKE negotiation and IPSec/ESP packets are allowed by default via the intrazone default allow policy.

**Answer: B,C**

Explanation:

Separate rules must be created for each direction: Palo Alto Networks firewalls enforce security policies based on traffic direction. To allow bidirectional communication through the IPSec tunnel, two separate rules are required - one for incoming and one for outgoing traffic.

IKE negotiation and IPSec/ESP packets are denied by default: Palo Alto Networks firewalls use an interzone default deny policy, meaning that unless an explicit policy allows IKE (UDP 500/4500) and ESP (protocol 50) traffic, the firewall will block these packets, preventing tunnel establishment. Therefore, administrators must create explicit rules permitting IKE and IPSec/ESP traffic to the firewall's external interface.

### **NEW QUESTION # 44**

What are the phases of the Palo Alto Networks AI Runtime Security: Network Intercept solution?

- A. Scanning, Isolation, Whitelisting, Logging
- **B. Discovery, Deployment, Detection, Prevention**
- C. Profiling, Policy Generation, Enforcement, Reporting
- D. Policy Generation, Discovery, Enforcement, Logging

**Answer: B**

Explanation:

The phases of the Palo Alto Networks AI Runtime Security: Network Intercept solution are designed to help identify and protect against potential threats in real time by using AI to detect and prevent malicious activities within the network.

Discovery: Identifying applications, services, and behaviors within the network to understand baseline activity.

Deployment: Implementing the solution into the network and integrating with existing security measures.

Detection: Monitoring traffic and activities to identify abnormal or malicious behavior.

Prevention: Taking action to stop threats once detected, such as blocking malicious traffic or stopping exploit attempts.

### NEW QUESTION # 45

For which two purposes is an IP address configured on a tunnel interface? (Choose two.)

- A. Use of dynamic routing protocols
- B. Tunnel monitoring
- C. Redistribution of User-ID
- D. Use of peer IP

**Answer: A,B**

Explanation:

Use of dynamic routing protocols: An IP address is needed on the tunnel interface to participate in dynamic routing protocols (like OSPF, BGP, etc.) over the tunnel. This allows the firewall to advertise routes and receive updates over the tunnel.

Tunnel monitoring: The IP address on the tunnel interface can also be used for monitoring the tunnel's status. Tunnel monitoring (such as IPSec tunnel monitoring) requires an IP address on the tunnel interface to check the health and availability of the tunnel.

### NEW QUESTION # 46

An engineer is implementing a new rollout of SAML for administrator authentication across a company's Palo Alto Networks NGFWs. User authentication on company firewalls is currently performed with RADIUS, which will remain available for six months, until it is decommissioned.

The company wants both authentication types to be running in parallel during the transition to SAML.

Which two actions meet the criteria? (Choose two.)

- A. Create a testing and rollback plan for the transition from Radius to SAML, as the two authentication profiles cannot be run in tandem.
- B. Create an authentication sequence that includes both the "RADIUS" Server Profile and "SAML Identity Provider" Server Profile to run the two services in tandem.
- C. Create and apply an authentication profile with the "SAML Identity Provider" Server Profile.
- D. Create and add the "SAML Identity Provider" Server Profile to the authentication profile for the "RADIUS" Server Profile.

**Answer: B,C**

Explanation:

B). Create an authentication sequence that orders the RADIUS profile first followed by the SAML profile, allowing the firewall to attempt RADIUS authentication and fall back to SAML if needed, supporting tandem operation for administrator logins.

C). Create and apply an authentication profile using the SAML Identity Provider Server Profile, which can then be sequenced alongside the existing RADIUS profile without disrupting current authentication.

### NEW QUESTION # 47

.....

If you fail NGFW-Engineer exam unluckily, don't worry about it, because we provide full refund for everyone who failed the exam. You can ask for a full refund once you show us your unqualified transcript to our staff. The whole process is time-saving and brief, which would help you pass the next NGFW-Engineer Exam successfully. Please contact us through email when you need us. Our purchasing process is designed by the most professional experts, that's the reason why we can secure your privacy while purchasing our NGFW-Engineer test guide.
