100% Pass CAD - Certified Application Developer-ServiceNow –High Pass-Rate Latest Braindumps Sheet

Buy ServiceNow CAD preparation material from a trusted company such as TestsDumps. This will ensure you get updated ServiceNow CAD study material to cover everything before the big day. Practicing for an Certified Application Developer-ServiceNow (CAD) exam is one of the best ways to ensure success. It helps students become familiar with the format of the actual CAD Practice Test. It also helps to identify areas where more focus and attention are needed. Furthermore, it can help reduce the anxiety and stress associated with taking an Certified Application Developer-ServiceNow (CAD) exam as it allows students to gain confidence in their knowledge and skills.

To earn the ServiceNow CAD Certification, candidates must pass a rigorous exam that tests their knowledge and skills in ServiceNow application development. CAD exam comprises 60 multiple-choice questions that must be completed within 90 minutes. The questions are designed to test the candidate's understanding of ServiceNow platform architecture, application development, and configuration. To prepare for the exam, candidates can take ServiceNow's official training courses or use other study materials available online.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q63-Q68):

NEW QUESTION # 63
Which method call returns true only if the currently logged in user has the catalog_admin role and in no other case?

- A. g_user.hasRoleFromList('catalog_admin')
- B. g_user.hasRoleOnly('catalog_admin')

- C. g_user.hasRoleExactly('catalog_admin')
- D. g_user.hasRole('catalog_admin')

Answer: C

Explanation:
The method call that returns true only if the currently logged in user has the catalog_admin role and in no other case is g_user.hasRoleExactly('catalog_admin'). This method checks if the user has exactly one role, and returns true if it matches the argument. The other methods return true if the user has one or more roles, or if the user has any role from a list of arguments.

NEW QUESTION # 64
Which business requirements and process(es) should be documented as part of the application development plan?
Choose 4 answers

- A. Process steps
- B. Users/stakeholders
- C. Project schedule
- D. Database capacity
- E. Available licenses
- F. Data input/output
- G. Business problem

Answer: A,B,F,G

Explanation:
The application development plan is a document that outlines the scope, objectives, deliverables, and timeline of a software project1. It should include the following business requirements and processes:
Data input/output: This describes what data is needed for the application to function, how the data is collected, stored, processed, and displayed, and what outputs are generated by the application2.
Business problem: This defines the problem or opportunity that the application aims to address, the current situation, the desired outcome, and the benefits of the solution3.
Process steps: This details the steps involved in the application development lifecycle, such as planning, designing, testing, deploying, and maintaining the application4.
Users/stakeholders: This identifies the people who will use, benefit from, or influence the application, their roles, responsibilities, and expectations, and how they will be involved in the project5.

NEW QUESTION # 65
Which ATF test step is used to set up a specific user profile for testing purposes?

- A. Create a group
- B. Impersonation
- C. Create a user
- D. Create a role

Answer: B

Explanation:
In the Automated Test Framework (ATF) of ServiceNow, the "Impersonate" test step is used to simulate actions as a specific user. This is crucial for testing functionalities that depend on user roles, permissions, or specific user contexts.
Key Points:
* Purpose: The "Impersonate" step allows the test to execute subsequent steps as if performed by the specified user, ensuring that role-based permissions and access controls are accurately tested.
* Usage: To add an "Impersonate" step:
* Open your test in ATF.
* Click on "Add Test Step."

* Select "Impersonate User."
* Choose the user you want to impersonate for the test.
* Considerations: Ensure that the user being impersonated has the necessary roles and permissions for the actions being tested.
Additionally, be aware that impersonation affects both server-side and client-side operations during the test.
Reference: For more detailed information, please refer to the official ServiceNow documentation on Automated Test Framework
Use Case: Test Basic Form Operations.

NEW QUESTION # 66
In a Business Rule, which one of the following returns true if the currently logged in user has the admin role?

- A. g_form.hasRole('admin')
- B. gs.hasRoleExactly('admin')
- C. g_form.hasRoleExactly('admin')
- D. gs.hasRole('admin')

Answer: D

Explanation:
Business Rule is server-side, so it uses GlideSystem API. gs.hasRoleExactly doesn't exist In a Business Rule, the following returns true if the currently logged in user has the admin role:
* gs.hasRole('admin'). This is the correct answer because gs is the GlideSystem object, which provides methods for performing system operations, and hasRole is a method that checks if the current user has the specified role. For example, gs.hasRole('admin') will return true if the current user has the admin role, and false otherwise.
The following do not return true if the currently logged in user has the admin role in a Business Rule:
* g_form.hasRoleExactly('admin'). This is not correct because g_form is the GlideForm object, which provides methods for manipulating forms, and hasRoleExactly is a method that checks if the current user has exactly the specified role and no other roles.
For example, g_form.hasRoleExactly('admin') will return true if the current user has only the admin role, and false if the current user has the admin role and any other role.
* g_form.hasRole('admin'). This is not correct because g_form is the GlideForm object, which provides methods for manipulating forms, and hasRole is a method that checks if the current user has the specified role or any role that contains the specified role. For example, g_form.hasRole('admin') will return true if the current user has the admin role or any role that contains the admin role, such as admin_ui or admin_script.
* gs.hasRoleExactly('admin'). This is not correct because gs is the GlideSystem object, which provides methods for performing system operations, and hasRoleExactly is not a valid method of the gs object.
There is no method that checks if the current user has exactly the specified role and no other roles in the gs object. References:
Business Rules, GlideSystem, GlideForm

NEW QUESTION # 67
Which one of the following is true regarding Application Scope?

- A. Developers can choose the prefix for a scope's namespace
- B. All applications are automatically part of the Global scope
- C. Any developer can edit any application
- D. Applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts

Answer: D

Explanation:
https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ApplicationScope.html The correct statement regarding Application Scope is that applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts. Application Scope is a feature that identifies and isolates applications and their related artifacts from other applications. Each scoped application has a unique namespace identifier that consists of a prefix and a scope name. This prevents cross-application name collisions and ensures that only authorized scripts can access or modify data in a scoped application.
