Pass Guaranteed Quiz CIS-SPM - Efficient Certified Implementation Specialist - Strategic Portfolio Management New Real Test

It is well known that certificates are not versatile, but without a CIS-SPM certification you are a little inferior to the same competitors in many ways. Compared with the people who have the same experience, you will have the different result and treatment if you have a CIS-SPM Certification. Without doubt, you will get a higher salary if you have a CIS-SPM certification or you can enter into a bigger company. And our CIS-SPM exam materials can make your dream come true.

ServiceNow Certified Implementation Specialist - Strategic Portfolio Management Sample Questions (Q98-Q103):

NEW QUESTION # 98

Is resource capacity derived from FTE or schedules?

- A. Only Schedules.
- B. Neither.
- C. Only FTE.
- D. Both.

Answer: A

Explanation:

Resource capacity is the total number of hours that a resource or a group of resources is available for work in a given time period. According to the Product Documentation for ServiceNow, resource capacity is derived from the user or group schedule, which defines the working hours and days for each resource. The group capacity is rolled up from the schedules of all the members. Note: Capacity is not derived from FTE, but from schedules. Both FTE and schedules must be in synchronization with each other. FTE is a measure of how much work a resource can perform in a standard work week, and it is used to calculate the resource demand and allocation.

NEW QUESTION # 99

The combination of the user and the assigned portfolio must be unique when adding a user to which registry?

- A. Application Registry.
- B. UX Page Registry.
- C. Stakeholder Registry.
- D. Event Registry.

Answer: C

Explanation:

Explanation

According to the Stakeholder Registry document, the combination of the user and the assigned portfolio must be unique when adding a user to the stakeholder registry. The stakeholder registry is a table that stores information about the stakeholders of a portfolio. The other options are not correct, as they are not registries that require a unique combination of user and portfolio. The application registry is a table that stores information about the applications in the system. The event registry is a table that stores information about the events that trigger notifications. The UX page registry is a table that stores information about the UX pages that are available for portfolios.

NEW QUESTION # 100

Which of the following can be used to calculate planned cost when creating a resource plan?

Choose 2 answers

- A. Default rate
- B. Rate card
- C. Demand rate
- D. Project rate

Answer: B,D

Explanation:

Explanation

According to the ServiceNow documentation¹, a rate card is a table that defines the hourly cost of labor for different roles or resources. A project rate is a fixed rate that is applied to all resources assigned to a project, regardless of their roles or individual rates. Both of these can be used to calculate the planned cost of a resource plan by multiplying the hours allocated to each resource by the corresponding rate. The other options are incorrect because:

A: Demand rate: A demand rate is a rate that is applied to a demand, not a resource plan. It is used to estimate the cost of fulfilling a demand before it is converted into a project².

C: Default rate: A default rate is a rate that is applied to a resource when no other rate is specified. It is not a valid option for calculating the planned cost of a resource plan, as it is only used as a fallback option³.

NEW QUESTION # 101

Where do you define 'Roles' requested via resource plans?

- A. Resource roles under resource management.
- B. Under skill management modules.
- C. No need to define it differently, they are same as system roles.
- D. Roles under system security.

Answer: A

Explanation:

According to the Assigning Resource Roles document, you define 'Roles' requested via resource plans under resource roles in the Resource Management application. Resource roles are the roles that users can request or allocate for resource plans. The other options are not correct, as they are not the places where you define 'Roles' requested via resource plans. The system roles are the roles that grant access to various applications and modules in the system. The roles under system security are the roles that control the security settings and permissions for the system. The skill management modules are the modules that manage the skills and skill levels of users and groups.

NEW QUESTION # 102

Which property controls the changes in cost and resource plans with respect to the change in the start date of a demand or project?

- A. 'Change Resource Plan, Cost Plan and Benefit Plan Start Date with Demand or Project Start Date Change'.
- B. 'Rollup project start date from tasks'.
- C. 'Enable altering of planned date for task in WIP/Closed'.
- D. 'Calculate ROI percentage based on a project's estimated cost and its net value'.

Answer: A

Explanation:

Explanation

According to the ServiceNow documentation¹, this property controls whether the start dates of the resource plan, cost plan, and benefit plan are automatically updated when the start date of the demand or project is changed. If this property is set to true, then the plans will be shifted by the same number of days as the demand or project start date change. If this property is set to false, then the plans will not be affected by the demand or project start date change.
