

New Exam NCP-MCI-6.10 Materials & NCP-MCI-6.10 Valid Test Pdf

DOWNLOAD the newest Itcertmaster NCP-MCI-6.10 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1ydkT__R9wtlNv6O5uVj1N9XI9QNYhQcf

The NCP-MCI-6.10 exam real questions are the ideal and recommended study material for quick and complete Nutanix NCP-MCI-6.10 exam preparation. As a NCP-MCI-6.10 Exam candidate you should not ignore the NCP-MCI-6.10 exam questions and must add the Nutanix NCP-MCI-6.10 exam questions in preparation.

IT elite team of our Itcertmaster make a great effort to provide large numbers of examinees with the latest version of Nutanix's NCP-MCI-6.10 exam training materials, and to improve the accuracy of NCP-MCI-6.10 exam dumps. Choosing Itcertmaster, you can make only half efforts of others to pass the same NCP-MCI-6.10 Certification Exam. What's more, after you purchase NCP-MCI-6.10 exam training materials, we will provide free renewal service as long as one year.

NCP-MCI-6.10 Valid Test Pdf, NCP-MCI-6.10 Latest Practice Questions

Long time learning might makes your attention wondering but our effective NCP-MCI-6.10 study materials help you learn more in limited time with concentrated mind. Just visualize the feeling of achieving success by using our NCP-MCI-6.10 exam guide, so you can easily understand the importance of choosing a high quality and accuracy NCP-MCI-6.10 training engine. You will have handsome salary get higher chance of winning and separate the average from a long distance and so on.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q95-Q100):

NEW QUESTION # 95

A Linux VM provides services for multiple clients on a single large subnet. The number of clients varies over time. The clients consist of VMs and physical systems.

The administrator observed network performance problems on the Linux VM when going over 2,000 client connections.

Which action can be performed to mitigate the issue?

- A. Configure vNIC to operate in trunk mode.
- B. Change VirtIO-Net vNIC to e1000 model.
- C. Add multiple vNICs to the virtual machine.
- **D. Enable RSS VirtIO-Net Multi-Queue.**

Answer: D

Explanation:

Nutanix AHV networking documentation explains that high-connection-count workloads can saturate a single network queue, causing receive-side bottlenecks. VirtIO-Net supports Multi-Queue with Receive-Side Scaling (RSS), allowing the VM to distribute

packet processing across multiple vCPUs. The documentation states, "Enabling RSS Multi-Queue improves performance for workloads handling a large number of simultaneous network flows by parallelizing packet handling." Trunk mode does not solve per-queue packet processing limitations. Adding vNICs is not recommended because the bottleneck is at the queue level, not the number of interfaces. Using the e1000 adapter results in lower performance compared to VirtIO and is discouraged. Therefore, enabling RSS Multi-Queue is the correct performance optimization for a VM handling thousands of client connections.

NEW QUESTION # 96

The customer expects to maintain a cluster runway of 9 months. The customer doesn't have a budget for 6 months but they want to add new workloads to the existing cluster.

Based on the exhibit, what is required to meet the customer's budgetary timeframe?

- A. Delete workloads running on the cluster.
- **B. Postpone the start of new workloads.**
- C. Change the target to 9 months.
- D. Add resources to the cluster.

Answer: B

NEW QUESTION # 97

An administrator has been tasked with monitoring performance across a number of different entities in the Nutanix cluster. The CIO has asked the administrator to provide Analysis charts that show performance as granularly as possible.

Given this request, what is the smallest preset time interval (in hours) that the administrator can select in a Metric or Entity Chart?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

When using Metric or Entity Charts in Prism Central for performance monitoring, the most granular preset time interval that can be selected is 1 hour.

From the Nutanix Enterprise Cloud Administration (ECA) course materials:

"Prism Central provides performance data visualization with customizable time intervals. The smallest preset interval for metric and entity charts is 1 hour, providing highly detailed performance information over short periods." This allows administrators to monitor performance fluctuations at a fine-grained level, aligning with best practices for troubleshooting and optimization.

NEW QUESTION # 98

An administrator is managing an environment based on two different AHV-based and ESXi-based clusters.

Workloads are evenly distributed and in a healthy state.

A Linux VM running on ESXi is not performing well at the storage level and is configured as follows:

* vCPU: 8
* VRAM: 32
* vDisk: 3, first 100 GB, second 250 GB, third 250 GB
What is the easiest way to test VM performance, while minimizing downtime?

- A. Enable vDisk sharding at AOS level.
- B. Increase the number of vCPUs.
- C. Collapse the second and the third disk into a single one
- **D. Migrate the VM to the AHV cluster.**

Answer: D

Explanation:

The best way to test the performance of a Linux VM that is underperforming at the storage level on an ESXi cluster, while minimizing downtime, is to migrate the VM to an AHV-based cluster. This allows leveraging Nutanix-native storage optimizations and hypervisor capabilities of AHV.

From the Nutanix Enterprise Cloud Administration (ECA) course materials:

"AHV and Nutanix storage integration is natively optimized for performance, leveraging capabilities like data locality, I/O path enhancements, and advanced metadata management. Migrating workloads from ESXi to AHV can often resolve performance bottlenecks associated with storage I/O." Additionally:

"Using the Nutanix Move tool, administrators can migrate running VMs between different hypervisors (e.g., ESXi to AHV) with minimal downtime and fully automated steps, reducing the operational burden." Increasing vCPUs would not address storage-level performance issues, and collapsing disks would require significant reconfiguration and VM downtime. vDisk sharding is not directly user-configurable and not applicable in this scenario.

NEW QUESTION # 99

An administrator has successfully configured Metro Availability for a Protection Domain. However, after a few days, an NCC warning is raised:

"Following VMs are accessing data from remote clusters: VM-1 from remote cluster Remote-ML" What is the first action an administrator must take to fix the issue?

- **A. Migrate the VM to its primary site and set appropriate rules for DRS and affinity.**
- B. Run the command: `ncli pd list metro-avail=true | egrep "Protection Domain Stretch Role" | grep "ACTIVE"`
- C. Run the command: `ncc health_checks metro_availability_checks data_locality_check --cvm_list=X.X.X.20`
- D. Use `must-affinity` rules to avoid automated VM migration to the standby datastore.

Answer: A

Explanation:

Metro Availability requires that VMs always read data from their primary site to maintain optimal performance and prevent remote data access latency.

* Option C (Migrate the VM to its primary site and set appropriate rules) is correct:

* If a VM fails over to the secondary site but is still running in the primary site, it will read data remotely, causing high latency and performance issues.

* The solution is to migrate the VM back to the primary site and configure DRS rules or host affinity settings to prevent unwanted movement.

* Option A is incorrect:

* The command lists active Metro Availability protection domains but does not resolve the issue.

* Option B is incorrect:

* Must-affinity rules can help, but they should be configured after migrating the VM back to the primary site.

* Option D is incorrect:

* Running NCC health checks will only diagnose the issue, not resolve it.

NEW QUESTION # 100

.....

Our NCP-MCI-6.10 study practice guide takes full account of the needs of the real exam and conveniences for the clients. Our NCP-MCI-6.10 certification questions are close to the real exam and the questions and answers of the test bank cover the entire syllabus of the real exam and all the important information about the exam. Our NCP-MCI-6.10 Learning Materials can stimulate the real exam's environment to make the learners be personally on the scene and help the learners adjust the speed when they attend the real NCP-MCI-6.10 exam.

NCP-MCI-6.10 Valid Test Pdf: <https://www.itcertmaster.com/NCP-MCI-6.10.html>

Enrollment in the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 is open to everyone, Even if you have no time to carefully prepare for your NCP-MCI-6.10 exams, you also can smoothly pass your exam by aid of DumpKiller's exam questions and answers, Nutanix New Exam NCP-MCI-6.10 Materials The product contains the relevant exam material, To ensure that you have a more comfortable experience before you choose to purchase our NCP-MCI-6.10 exam quiz, we provide you with a trial experience service.

Setting Up a New Home Internet Connection, To live a better NCP-MCI-6.10 life, everyone in the society devotes most of their time to work, but life is still plainness and difficulty.

Enrollment in the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 is open to everyone, Even if you have no time to carefully prepare for your NCP-MCI-6.10 exams, you also can smoothly pass your exam by aid of DumpKiller's exam questions and answers.

Professional Nutanix - New Exam NCP-MCI-6.10 Materials

The product contains the relevant exam material, To ensure that you have a more comfortable experience before you choose to purchase our NCP-MCI-6.10 exam quiz, we provide you with a trial experience service.

Due to the particularity about actual Nutanix Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) exam Vce NCP-MCI-6.10 Download test, the simple reviewing is just not enough, so you should prepare with the help of some valid and useful exam reference.
