## H12-521\_V1.0 Exam Pattern | H12-521\_V1.0 Top Dumps

In order to pass the exam and fight for a brighter future, these people who want to change themselves need to put their ingenuity and can do spirit to work. More importantly, it is necessary for these people to choose the convenient and helpful H12-521\_V1.0 test questions as their study tool in the next time. Because their time is not enough to prepare for the exam, and a lot of people have difficulty in preparing for the exam, so many people who want to pass the H12-521\_V1.0 exam and get the related certification in a short time have to pay more attention to the study materials. In addition, best practice indicates that people who have passed the H12-521\_V1.0 Exam would not pass the exam without the help of the H12-521\_V1.0 reference guide. So the study materials will be very important for all people. If you also want to pass the exam and get the related certification in a short, the good study materials are the best choice for you. Now we are going to make an introduction about the H12-521\_V1.0 exam prep from our company for you.

## Huawei HCIP-Intelligent Vision V1.0 Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Which of the following statements about IVS 3800 are correct? (Multiple choice)

- A. Support deploying management nodes only, not business nodes
- B. The business node refers to the server that does not contain the CS POM container
- C. The management node only supports cluster deployment, not stand-alone deployment
- D. The management node refers to the server containing the CS POM container

**Answer: B,D**

#### NEW QUESTION # 31

For the power supply of video sites in the main urban area, which of the following power supply methods is generally considered?

- A. Lithium battery
- B. Mains
- C. Wind energy
- D. None of the above

**Answer: B**

#### NEW QUESTION # 32

Camera log types include (). (Multiple Choice)

- A. Exception log
- B. Alarm log
- C. Operation log
- D. Run log

**Answer: A,B,C**

#### NEW QUESTION # 33

Which of the following operations cannot be performed when you adjust images in the web system of a PTZ dome camera?

- A. Switch the secondary stream type
- B. Take snapshots
- C. Use the virtual joystick to adjust the camera's shooting direction
- D. Perform electronic pan-tilt-zoom ePTZ operations

**Answer: A**

Explanation:

The correct answer is B because switching the secondary stream type is a stream configuration task, not an image-adjustment operation in the PTZ dome camera web interface. During image adjustment, the operator typically works with live-view and framing tools, such as directional control, local inspection, and capture assistance. That is why operations such as using a virtual joystick to move the PTZ direction, taking snapshots, and performing ePTZ for local image inspection fit naturally into image adjustment behavior.

The broader training content confirms that PTZ control belongs to live-view operation, stating that users can "perform PTZ controls ... for example, control the PTZ direction, set PTZ preset positions, and set the home position". That supports directional adjustment as a valid operation. A snapshot is also a live-view support function, while ePTZ is commonly used for image observation and local enlargement. However, secondary stream type belongs to video stream configuration, such as choosing or modifying stream properties, and is not part of direct image-adjustment handling. Therefore, the option that cannot be performed in image adjustment is B.

#### NEW QUESTION # 34

The central cloud platform uses hierarchical storage technology, which is characterized by combining storage media (HDD, SSD) to store the most frequently used and most intensive data (such as high-frequency access snapshots) on high-performance disks. The historical data (such as historical video) with reduced access frequency is transferred to a storage medium with a larger capacity and a lower cost.
