

MB-820 Prüfungsinformationen, MB-820 PDF

P.S. Kostenlose 2026 Microsoft MB-820 Prüfungsfragen sind auf Google Drive freigegeben von ZertSoft verfügbar:
https://drive.google.com/open?id=1N92AYNUfA30QV1C7nLyGrZ8_RYlrSvEo

Sorgen Sie noch darum, dass Sie die Microsoft MB-820 Zertifizierungsprüfung nicht bestehen können? Dann sollen Sie sich an ZertSoft wenden. Wir können Sie die Top-Fähigkeit in der IT-Branche mitbringen, mit der Sie die Microsoft MB-820 Prüfung mühelos bestehen. Nach langjährigen Bemühungen beträgt die Bestehensrate bereits 100%. Wählen Sie ZertSoft, dann wählen Sie einen Weg zur glänzenden Zukunft.

Microsoft MB-820 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.
Thema 2	• Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Thema 3	• Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.

MB-820 PDF & MB-820 Testking

Manchmal muss man mit große Menge von Prüfungsaufgaben üben, um eine wichtige Prüfung zu bestehen. Die Microsoft MB-820 von uns hat diese Forderung gut erfüllt. Und mit den fachlichen Erklärungen können Sie besser die Antworten verstehen. Die Demo der Microsoft MB-820 von unterschiedlichen Versionen werden von uns gratis angeboten. Probieren Sie mal und wählen Sie die geeignete Version für Sie! Mit unserer gemeinsamen Arbeit werden Sie bestimmt die Microsoft MB-820 Prüfung erfolgreich bestehen!

Microsoft Dynamics 365 Business Central Developer MB-820 Prüfungsfragen mit Lösungen (Q42-Q47):

42. Frage

A company owns and operates hotels, restaurants, and stores.

When the staff orders materials from the purchasing department, the requests are not directed to the correct approvers.

The staff requires a new field named Approver from which they can select the appropriate approver. The field must include the following options:

- * Hotel manager
- * Restaurant manager
- * Store manager
- * Purchasing manager

You need to create the Approver field in the Item table by using an AL extension.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions
Create an enum object named Approver and include all options.
Create a table extension object for an Item table with an Approver field of enum type named Approver in the layout section.
Create a page extension object that extends the Item Card object. Add the field to the layout section.
Create a table extension object for an Item table with an Approver field of enum type named Approver in the field section.
Create a page extension object that extends the Item Card object. Add the field to the fields section.
Add the options to the existing Base Application Approver table.

Antwort:

Begründung:

Actions
Create an enum object named Approver and include all options.
Create a table extension object for an Item table with an Approver field of enum type named Approver in the layout section.
Create a page extension object that extends the Item Card object. Add the field to the layout section.
Create a table extension object for an Item table with an Approver field of enum type named Approver in the field section.
Create a page extension object that extends the Item Card object. Add the field to the fields section.
Add the options to the existing Base Application Approver table.

Explanation:

To create the Approver field in the Item table using an AL extension, perform the following actions in sequence:

- * Create an enum object named Approver and include all options.
- * Create a table extension object for an Item table with an Approver field of enum type named Approver in the fields section.
- * Create a page extension object that extends the Item Card object. Add the field to the fields section.

Build and extend tables: To add a new field to an existing table in Business Central using AL extension, you need to define an enumeration (enum) with the possible values for the new field. Then, you create a table extension object where you add the new field and specify its type as the enum you created. This adds the field to the Item table. Finally, you modify the user interface to display the new field by creating a page extension for the Item Card page and adding the new field to it.

43. Frage

A company plans to integrate tests with its build pipelines.

The company has two Docker sandbox environments: SandboxA and SandboxB.

You observe the following:

* SandboxA is configured without the Test Toolkit installed.

* SandboxB must be configured from scratch. The Test Toolkit must be installed in SandboxB during configuration.

You need to configure the sandbox environments.

How should you complete the cmdlets? To answer, select the appropriate options in the answer area.

The screenshot shows the Microsoft Test Toolkit configuration window for a container named 'SandboxA'. The window has a title bar 'Test Toolkit' and the Microsoft logo. A dropdown menu is open, showing four options: 'includeTestToolkit', 'includeTestFramework', 'Install-TestToolkitToBcContainer', and 'Import-TestToolkitToBcContainer'. Below the menu, there is a PowerShell script snippet. The script defines variables for artifact URL and license file, then uses 'Get-BcArtifactUrl' to retrieve the artifact URL. It then uses 'New-BcContainer' to create a container named 'SandboxB' with various parameters including '-accept_eula', '-containerName', '-artifactUrl', '-imageName', and '-licenseFile'. Below the script, there is another dropdown menu with the same four options as the first one. At the bottom, there are three additional parameters: '-includeAL', '-vsixFile (Get-LatestAllLanguageExtensionUrl)', and '-updateHosts'.

```
Test Toolkit Microsoft -containerName SandboxA

includeTestToolkit
includeTestFramework
Install-TestToolkitToBcContainer
Import-TestToolkitToBcContainer

$artifactUrl = Get-BcArtifactUrl -type 'OnPrem' -country 'w1'
$licenseFile = 'C:\Lic\license.bclicense'
Get-BcArtifactUrl -type 'OnPrem' -country 'w1'
New-BcContainer -
  -accept_eula
  -containerName 'SandboxB'
  -artifactUrl $artifactUrl
  -imageName 'ImageB'
  -licenseFile $licenseFile

includeTestToolkit
includeTestFramework
Install-TestToolkitToBcContainer
Import-TestToolkitToBcContainer

-includeAL
-vsixFile (Get-LatestAllLanguageExtensionUrl)
-updateHosts
```

Antwort:

Begründung:

Explanation:

Based on the PowerShell script snippet you've provided and the scenario described, you need to configure Docker sandbox environments for a company with specific requirements for Test Toolkit installations.

For SandboxA, since it is configured without the Test Toolkit installed, you would typically use the PowerShell cmdlet `Install-TestToolkitToBcContainer` to install the Test Toolkit into the Business Central Docker container.

For SandboxB, which must be configured from scratch with the Test Toolkit installed during configuration, you would include the Test Toolkit as part of the `New-BcContainer` script block that creates the container.

The relevant cmdlets and parameters for SandboxB would include:

- * `-includeTestToolkit`: This parameter ensures that the Test Toolkit is included during the creation of the new container.

Given the limited context from the image, here's how you should complete the cmdlets for SandboxB:

- * Add `-includeTestToolkit` in the `New-BcContainer` script to ensure the Test Toolkit is installed when creating SandboxB.

- * Since you are setting up SandboxB from scratch, you don't need to run `Install-TestToolkitToBcContainer` separately as the toolkit will be included at the time of container creation with the `-includeTestToolkit` parameter.

For the `New-BcContainer` cmdlet, you would fill in the placeholders with the appropriate values for `artifactUrl`, `imageName`, and `licenseFile` if they are required for your specific setup.

44. Frage

You need to develop the report Subcontract Documents Excel List that is required by the control department.

You have the following code:

```

1 report 50100 "Report Excel Layout"
2 {
3     UsageCategory = ReportsAndAnalysis;
4     ApplicationArea = All;
5     DefaultRenderingLayout = wordLayout;
6     Caption = 'Subcontract Documents Excel List';
7     dataset
8     {
9         dataitem(PostedDocuments; "Subcontract Documents")
10        {
11            DataItemTableView = where(Posted = const(true));
12            column(ID; ID) { }
13            column(Description; Description) { }
14            column(Comments; comments) { }
15        }
16        dataitem(UnPostedDocuments; "Subcontract Documents")
17        {
18            DataItemTableView = where(Posted = const(false));
19            column(ID_Unposted; ID) { }
20            column(Description_Unposted; Description) { }
21            column(Comments_Unposted; comments) { }
22        }
23    }
24    rendering
25    {
26        layout(excelLayout)
27        {
28            Type = Excel;
29            LayoutFile = 'subcontratorDocuments.xlsx';
30        }
31        layout(wordLayout)
32        {
33            Type = Word;
34            LayoutFile = 'subcontratorDocuments.docx';
35        }
36    }
37 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Code update for the Subcontract Documents Excel List		Yes	No
Statements			
Delete lines 31 to 35 because that includes a Word report. Change line 5 to DefaultLayout = Excel;.	☐	☐	
Delete lines 31 to 35 because that includes a Word report. Change the line 5 to DefaultRenderingLayout=excelLayout; and add a new line after line 6 with ExcelLayoutMultipleDataSheets = true;.	☐	☐	
Change the property on line 5 to DefaultRenderingLayout=excelLayout; and add a new line after line 6 with the property ExcelLayoutMultipleDataSheets = true;.	☐	☐	

Antwort:

Begründung:

Code update for the Subcontract Documents Excel List		Yes	No

Change the property on line 5 to DefaultRenderingLayout=excelLayout; and add a new line after line 6 with the property ExcelLayoutMultipleDataSheets = true;.	☐	☒	

45. Frage

You are developing an XMLport to export data from the parent Item table and a related child 'Item Unit of Measure' table. The XMLport configuration must provide the following:

- * Link the child table to its parent.
- * Display a confirmation message after the XMLport runs.

You need to generate the XMLport.

What should you do? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Triggers	XMLport trigger	Requirement	Trigger
OnAfterGetRecord		Requirement	
OnBeforeGetRecord		Trigger to link the child table to its parent	
OnPostXmlPort		Trigger to display a confirmation message after the XmlPort runs	
OnPreXmlItem			

Antwort:

Begründung:

Triggers	XMLport trigger	Requirement	Trigger
OnAfterGetRecord		Requirement	
OnBeforeGetRecord		Trigger to link the child table to its parent	
OnPostXmlPort		Trigger to display a confirmation message after the XmlPort runs	
OnPreXmlItem			

46. Frage

You create a table with fields.

You observe errors in the code.

You need to resolve the errors.

```

01 field(1; "Job No."; Code[20])
02 {
03     Caption = "Job No.";
04 }
05 field(2; Description; text[150])
06 {
07     Caption = 'Description';
08 }
09 field(3; "Sales Amount"; Decimal)
10 {
11     AutoFormatType = 1;
12     CalcFormula = sum("Job Task"."Recognized Sales Amount" where("Job No." = field("No.")));
13     Caption = 'Calc. Recog. Sales Amount';
14     Editable = false;
15 }
16 field(5; "Over Budget"; Boolean)
17 {
18     Caption = 'Over Budget';
19 }
20 field(6; "Project Manager"; Code[50])
21 {
22     Caption = 'Project Manager';
23     TableRelation = "User Setup";
24 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Error resolution			
Statement	Yes	No	
In line 12, declare "Job Task" as a variable.	☐	☐	
Add the property FieldClass = FlowField; for field 3.	☐	☐	
Add the property FieldClass = FlowFilter; for field 3.	☐	☐	
In line 23, assign the "User Setup" table to a field.	☐	☐	

Antwort:

Begründung:

Error resolution

Statement	Yes	No
In line 12, declare "Job Task" as a variable.	☐	☒
Add the property FieldClass = FlowField; for field 3.	☒	☐
Add the property FieldClass = FlowFilter; for field 3.	☐	☒
In line 23, assign the "User Setup" table to a field.	☒	☐
