## How Can You Crack ATlassian ACP-120 Exam in the Easiest and Quick Way?

The Channel Partner Program Jira Cloud Administrator ACP-120 certification enables you to move ahead in your career later. With the ATlassian ACP-120 certification exam you can climb up the corporate ladder faster and achieve your professional career objectives. Do you plan to enroll in the Jira Cloud Administrator ACP-120 Certification Exam? Looking for a simple and quick way to crack the ATlassian ACP-120 test?

## ATlassian Jira Cloud Administrator Sample Questions (Q34-Q39):

### NEW QUESTION # 34

Which configurations do Not have any impact on email notifications sent to users

- A. Version Configurations

- B. Permission Schemes
- C. Custom Events
- D. Workflow post functions

**Answer: A**

### NEW QUESTION # 35

Your marketing group is using Jira to track media print advertisements. They would like to track TV and radio commercials as well. The same team handles all three formats, but each format requires a unique workflow. The team would like to keep everything on the same dashboard, and they will also be using the same permissions, notifications and screens. Without using third-party apps, how should you configure Jira to meet these requirements?

- A. Copy the existing permissions and notification schemes, and associate them with new projects for TV and Radio.
- B. Use issue types of Print, Radio and TV in the existing project.
- C. Clone the existing project and key for TV and Radio.
- D. Create a sub-component hierarchy.
- **E. Create two new projects for TV and Radio.**
- F. Add TV and Radio into the existing project as components.

**Answer: E**

### NEW QUESTION # 36

Requirements for field behavior in a company-managed project are shown:

Issue Type

Attribute (custom field)

Epic

Hidden

Story

Optional

Bug

Required

What do you need to configure to meet the requirements?

- A. Custom field contexts
- B. Screens
- **C. Field configurations**
- D. Screen schemes

**Answer: C**

Explanation:

To meet the requirements for the Attribute custom field's behavior (hidden for Epics, optional for Stories, required for Bugs) in a company-managed project, you need to configure field configurations (Option A).

Field configurations define whether a field is required, optional, or hidden for specific issue types.

\* Explanation of the Correct Answer (Option A):

\* Field configurations control the behavior of fields (e.g., required, optional, hidden) for different issue types in a company-managed project. To meet the requirements:

\* For Epics, set the Attribute field to Hidden.

\* For Stories, set the Attribute field to Optional (not required).

\* For Bugs, set the Attribute field to Required.

\* This is achieved by creating multiple field configurations (one for each issue type's behavior) and associating them with a field configuration scheme that maps configurations to issue types.

\* Exact Extract from Documentation:

Configure field settings

Field configurations define whether fields are required, optional, or hidden for specific issue types. A field configuration scheme maps field configurations to issue types in a project.

To configure:

\* Go to Settings > Issues > Field configurations.

\* Create or edit field configurations (e.g., one for Epics, Stories, Bugs).

- \* For each configuration:
- \* Mark a field as **Required** to enforce a value.
- \* Mark a field as **Hidden** to remove it from screens.
- \* Leave a field as **Optional** (default) if not required.
- \* Create a field configuration scheme (Settings > Issues > Field configuration schemes) and map configurations to issue types.
- \* Assign the scheme to the project in Project settings > Fields. Example: Hide a field for Epics, make it optional for Stories, and required for Bugs. (Source: Atlassian Support Documentation, "Configure field settings")
- \* **Why This Fits:** Field configurations allow you to set the Attribute field as hidden, optional, or required for different issue types, directly meeting the requirements.
- \* **Why Other Options Are Incorrect:**
- \* **Screens (Option B):**
- \* Screens define which fields appear during issue operations (e.g., Create, Edit, View). While hiding a field on a screen for Epics could make it appear hidden, screens are not issue type-specific unless combined with a screen scheme. Screens also cannot enforce required or optional behavior, which is handled by field configurations.
- \* **Extract from Documentation:**

Screens control which fields are displayed but do not manage required or optional behavior. Use field configurations for field behavior.  
(Source: Atlassian Support Documentation, "Configure screens in Jira Cloud")

- \* **Custom field contexts (Option C):**
- \* Custom field contexts define the options and default values for a custom field across projects or issue types. They do not control whether a field is hidden, optional, or required, which is managed by field configurations.
- \* **Extract from Documentation:**

Custom field contexts set options and defaults for fields, not their visibility or required status. Use field configurations for behavior.  
(Source: Atlassian Support Documentation, "Manage custom fields in Jira Cloud")

- \* **Screen schemes (Option D):**
- \* Screen schemes map screens to issue operations (e.g., Create, Edit) for issue types. They control which fields appear on screens but do not manage whether fields are required or optional, which is handled by field configurations.
- \* **Extract from Documentation:**

Screen schemes assign screens to issue types but do not control field behavior like required or hidden. Use field configurations for this.  
(Source: Atlassian Support Documentation, "Configure screen schemes in Jira Cloud")

- \* **Additional Notes:**
- \* **Steps to configure:**
- \* Create three field configurations in Settings > Issues > Field configurations:
- \* Epic: Set Attribute to Hidden.
- \* Story: Set Attribute to Optional.
- \* Bug: Set Attribute to Required.
- \* Create a field configuration scheme in Settings > Issues > Field configuration schemes and map each configuration to the respective issue type (Epic, Story, Bug).
- \* Assign the scheme to the project in Project settings > Fields.
- \* Configuring field configurations requires Jira administrator privileges.
- \* Ensure the Attribute custom field is included on the relevant screens (except for Epics, where it is hidden) to avoid conflicts.

### NEW QUESTION # 37

The Customer Relations team has just been given access to Jira. They can see two projects but not the project boards. They created several advanced searches and want other project members to see the results. Which permission do they require without receiving too much access?

- A. Administer Jira
- B. Browse Projects
- C. Board administrator
- **D. Share dashboards and filters**

**Answer: D**

Explanation:

The Customer Relations team can see two projects (indicating they have Browse Projects permission) but not the project boards, and they want to share advanced searches (filters) with other project members. The permission required to share filters without granting excessive access is the Share dashboards and filters global permission (Option B).

\* Explanation of the Correct Answer (Option B):

\* The Share dashboards and filters global permission allows users to share filters and dashboards with other users, groups, or roles.

This permission is necessary for the team to make their advanced searches visible to other project members. It is a targeted permission that does not grant additional administrative or project-level access.

\* Exact Extract from Documentation:

Share dashboards and filters permission

The Share dashboards and filters global permission allows users to share filters and dashboards with other users, groups, projects, or the entire organization.

To grant this permission:

\* Go to Settings > System > Global permissions.

\* Add a user, group, or role to the Share dashboards and filters permission. Note: This permission is required to make filters or dashboards accessible to others, but it does not grant access to view issues or manage boards. (Source: Atlassian Support Documentation,

"Manage global permissions")

\* Why This Fits: The Share dashboards and filters permission directly enables the team to share their advanced searches (filters) with other project members without granting unnecessary privileges, making Option B the correct choice.

\* Why Other Options Are Incorrect:

\* Browse Projects (Option A):

\* The Browse Projects permission allows users to view issues in a project. Since the team can already see two projects, they likely have this permission. It does not control the ability to share filters or access project boards.

\* Extract from Documentation:

The Browse Projects permission allows users to view issues and projects. It does not include sharing filters or managing boards.

(Source: Atlassian Support Documentation, "Manage project permissions")

\* Board administrator (Option C):

\* The Board administrator role (or Manage Sprints permission for company-managed projects) allows users to manage boards, including viewing and editing them. While this would allow the team to see project boards, it grants excessive access (e.g., modifying sprints) and does not address sharing filters.

\* Extract from Documentation:

Board administrators can manage board settings and sprints. This role is not required to share filters or dashboards.

(Source: Atlassian Support Documentation, "Manage boards in Jira Cloud")

\* Administer Jira (Option D):

\* The Administer Jira permission (Jira administrator role) grants full access to global settings, including user management, schemes, and permissions. This is far too much access for the team's needs, which are limited to sharing filters.

\* Extract from Documentation:

The Administer Jira permission grants access to all global settings. It is not needed for sharing filters or viewing boards.

(Source: Atlassian Support Documentation, "Manage global permissions")

\* Additional Notes:

\* The team's inability to see project boards likely stems from lacking the View Development Tools or Manage Sprints permission, or not being board administrators. However, the question focuses on sharing filters, so Share dashboards and filters is the relevant permission.

\* The permission can be granted to the team via a group in Settings > System > Global permissions.
