NEW QUESTION # 75

Which of the following can you use to explore released APIs?

- A. SAP Integration Suite
- B. SAP Business Accelerator Hub
- C. SAP Application Interface Framework

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

SAP provides tools to explore released APIs, particularly for integration with SAP S/4HANA and EWM. Option A ("SAP Business Accelerator Hub") is correct because it is the official platform (previously known as SAP API Business Hub) where developers can discover, explore, and test SAP-released APIs, including those for EWM. It provides detailed documentation and sandbox environments, accessible via SAP's public portal. Option B ("SAP Application Interface Framework") is used for monitoring and managing interfaces, not exploring APIs. Option C ("SAP Integration Suite") is a tool for building integrations, not specifically for API exploration.

- A. Storage bins from different storage types can be assigned to the same activity area.
- B. A storage bin can be assigned to only one activity area.
- C. Storage bins must be manually assigned to an activity area.
- D. An activity area must be created automatically for a storage type.

Answer: A

Explanation:

Assignment of Storage Bins to Activity Areas

* Storage Bins from Different Storage Types (B): Multiple storage types can have their bins assigned to a single activity area, facilitating logical grouping for specific tasks like picking or putaway.

Excluded Options

* A: Activity areas are not created automatically for storage types; this is configured manually.
* C: A storage bin can belong to multiple activity areas for different operations.
* D: Manual assignment is an option, but bins can also be assigned automatically through configuration rules.

SAP S/4HANA Cloud Private Edition Reference

* Refer to Activity Area and Bin Assignment in SAP EWM.

- A. Work center
- B. Properties
- C. EWM stock type
- D. Sample drawing procedure

Answer: C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In decentralized EWM with QM integration, inspection rules define quality checks. Option A ("Sample drawing procedure") is correct as it specifies sampling logic, and option B ("EWM stock type") is correct because it determines the stock to inspect (e.g., unrestricted), both configured in SPRO: SCM Extended Warehouse Management > Quality Management > Define Inspection Rules. Option C (work center) is production-related, and option D (properties) is too vague and not a standard element.
