Salesforce Health Cloud Accredited Professional Certification Exam is a valuable certification for healthcare professionals who want to demonstrate their expertise in using Salesforce Health Cloud to improve healthcare delivery processes. Health-Cloud-Accredited-

Professional Exam covers a range of topics related to the healthcare industry, patient engagement, care coordination, and data management. By passing the exam and earning the certification, professionals can enhance their careers and demonstrate their commitment to providing high-quality patient care.

To become a Salesforce Health-Cloud-Accredited-Professional, candidates must possess a deep understanding of the healthcare industry and its unique challenges. They must also have a strong knowledge of Salesforce Health Cloud features such as patient management, care plan management, health tracking, and data analytics. Salesforce Health Cloud Accredited Professional certification is designed to test a candidate's ability to implement these features effectively and efficiently.

Salesforce Health Cloud Accredited Professional Sample Questions (Q40-Q45):

NEW QUESTION # 40
What are three requirements for implementing patients or members in Health Cloud?
Choose 3 answers

- A. Ensure the Account is the Parent to Household Accounts.
- B. Ensure the Parent Account field is blank.
- C. Ensure 1-to-1 Account to Contact relationship.
- D. Ensure the Parent Contact object is blank.
- E. Ensure the Person Account object is used.

Answer: A,C,E

Explanation:
Implementing patients or members in Health Cloud requires careful configuration to accurately represent individual relationships and household structures.
1. Ensure the Account is the Parent to Household Accounts (Answer C):
Purpose: In Health Cloud, modeling household relationships is essential for understanding the familial and support networks of patients. By setting the Account as the parent to Household Accounts, you can effectively represent and manage these relationships.
Implementation Steps:
Create a Household Account to represent the family or support group.
Associate individual Person Accounts (patients) as members of this Household Account.
Use the Account Hierarchy to visualize and manage these relationships.
Reference:
Salesforce
2. Ensure the Person Account Object is Used (Answer D):
Purpose: Person Accounts in Salesforce combine the attributes of accounts and contacts into a single record, suitable for representing individual patients or members. This structure simplifies data management and aligns with Health Cloud's patient-centric model.
Implementation Steps:
Ensure that Person Accounts are enabled in your Salesforce org.
Configure page layouts and record types to support Person Accounts.
Migrate existing individual records to Person Accounts if necessary.
Confianza Salesforce Partner
3. Ensure 1-to-1 Account to Contact Relationship (Answer E):
Purpose: Maintaining a one-to-one relationship between accounts and contacts ensures data integrity and simplifies the management of individual patient records. This setup is particularly important when Person Accounts are not used, as it emulates the combined record structure.
Implementation Steps:
For each Contact, create a corresponding Account to maintain a 1:1 relationship.
Implement automation (e.g., using Salesforce Flow) to enforce this relationship during record creation.
Regularly audit records to ensure compliance with the 1:1 relationship model.

NEW QUESTION # 41
When setting up Intelligent Sales, which three types of records should an administrator create for a Field Sales Agent before Visit records can be created? (Choose three.)

- A. Accounts
- B. Assets

- C. Contacts
- D. Locations
- E. Opportunities

Answer: A,C,D

NEW QUESTION # 42
As part of a post-visit summary, a client wants to send patients information documenting their visit and care plan. A patient advocate will select from templates to create personalized documents to send. Which tool should a developer use to provide the necessary functionality?

- A. Health Cloud Email Manager
- B. Salesforce PDF Generator
- C. Contract Lifecycle Management
- D. OmniStudio Document Generation

Answer: D

Explanation:
B is correct because OmniStudio Document Generation is the tool that can provide the necessary functionality to send patients information documenting their visit and care plan. OmniStudio Document Generation allows users to generate documents from Microsoft Word or PowerPoint templates that can include data from any Salesforce object or external data source. Users can select from predefined templates or create their own, and personalize the documents with conditional logic, data tokens, and tabulation. Users can also convert the documents to PDF format and send them via email or other channels.

NEW QUESTION # 43
A consultant is implementing Identity Verification for their customer's customer service representatives and needs to add a new search parameter.
Which record should the consultant configure to accomplish this?

- A. Verification Search Feature
- B. Linked Identity Search Detail
- C. Identity Verification Parameter Item
- D. Identity Verification Process Detail

Answer: C

Explanation:
To implement Identity Verification in Salesforce and add a new search parameter, the consultant needs to configure the Identity Verification Parameter Item record.
Key Details:
Identity Verification Parameter Item:
Purpose: Defines the parameters used in the identity verification process, such as name, email, phone, or custom attributes.
Configuration Steps:
Navigate to Identity Verification Parameter Item in Setup or the appropriate Health Cloud app.
Create or modify a record to include the new parameter, such as a specific field or custom attribute.
Link it to the corresponding Identity Verification Process Detail to ensure it's utilized during verification.
Supporting Documentation:
Salesforce Health Cloud Admin Guide (help.salesforce.com)
Identity Verification Configuration Overview (developer.salesforce.com)

NEW QUESTION # 44
A UX designer wants to change the formatting of an OmniStudio FlexCard field element to have a font of Times New Roman with a red color.
What are two ways the designer should make the changes?
Choose 2 answers

- A. Made edits to Setup Panel.
- B. Make edits to Field Properties.
- C. Make edits to Field Style.
- D. write custom CSS,

Answer: C,D

Explanation:
In OmniStudio FlexCards, when you want to change the visual styling of a field element (e.g., font type, font color, formatting), you have two main options:
A . Write custom CSS
OmniStudio FlexCards allow applying custom CSS classes for fine-grained control of styles.
This is how you can specify a font like Times New Roman or apply a red color.
B . Make edits to Field Style
The Field Style editor within the FlexCard Designer lets you directly configure basic styling properties (like text color, background, alignment, etc.) without needing custom CSS.
Why not the others?
C . Make edits to Setup Panel - The Setup Panel is for data source, conditions, and layout configuration, not for styling individual fields.
D . Make edits to Field Properties - Field Properties are used to configure which data is displayed and how it behaves (like label, formatting rules, or conditional display), but styling is handled through Field Style or CSS, not properties.
Salesforce OmniStudio Reference:
* Salesforce OmniStudio FlexCard Designer Guide
"You can use the Field Style editor to set basic styles, such as font color and alignment."
"For advanced customization, apply custom CSS classes to field elements."
