Please believe that our Prep4SureReview team have the same will that we are eager to help you pass Mule-Arch-201 exam. Maybe you are still worrying about how to prepare for the exam, but now we will help you gain confidence. By constantly improving our dumps, our strong technical team can finally take proud to tell you that our Mule-Arch-201 exam materials will give you unexpected surprises. You can download our free demo to try, and see which version of Mule-Arch-201 Exam Materials are most suitable for you; then you can enjoy your improvement in IT skills that our products bring to you; and the sense of achievement from passing the Mule-Arch-201 certification exam.

To some extent, to pass the Mule-Arch-201 exam means that you can get a good job. The Mule-Arch-201 exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our Mule-Arch-201 Test Prep is compiled elaborately and will help the client get the Mule-Arch-201 certification. To get a better and full understanding of our Mule-Arch-201 quiz torrent, you can just free download the demo of our Mule-Arch-201 exam questions.

Realistic Mule-Arch-201 100% Exam Coverage - 100% Pass Salesforce Latest Salesforce Certified MuleSoft Platform Architect Learning Material

Before buying the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam questions, Prep4SureReview also offers a Salesforce Mule-Arch-201 exam questions demo of the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam. You can test out the Salesforce Mule-Arch-201 pdf questions product with this Mule-Arch-201 questions demo before purchasing the full package. The Salesforce Mule-Arch-201 PDF Questions demo provides an overview of the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam study product and how it can assist you in passing the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q132-

Q137):

NEW QUESTION # 132

What is true about API implementations when dealing with legal regulations that require all data processing to be performed within a certain jurisdiction (such as in the USA or the EU)?

- A. They must use a Jurisdiction-local external messaging system such as Active MQ rather than Anypoint MQ
- B. They must be deployed to Anypoint Platform runtime planes that are managed by Anypoint Platform control planes, with both planes in the same Jurisdiction
- C. They must avoid using the Object Store as it depends on services deployed ONLY to the US East region
- D. They must ensure ALL data is encrypted both in transit and at rest

Answer: B

Explanation:

Correct Answer: They must be deployed to Anypoint Platform runtime planes that are managed by Anypoint Platform control planes, with both planes in the same Jurisdiction.

>> As per legal regulations, all data processing to be performed within a certain jurisdiction. Meaning, the data in USA should reside within USA and should not go out. Same way, the data in EU should reside within EU and should not go out.

>> So, just encrypting the data in transit and at rest does not help to be compliant with the rules. We need to make sure that data does not go out too.

>> The data that we are talking here is not just about the messages that are published to Anypoint MQ. It includes the apps running, transaction states, application logs, events, metric info and any other metadata. So, just replacing Anypoint MQ with a locally hosted ActiveMQ does NOT help.

>> The data that we are talking here is not just about the key/value pairs that are stored in Object Store. It includes the messages published, apps running, transaction states, application logs, events, metric info and any other metadata. So, just avoiding using Object Store does NOT help.

>> The only option left and also the right option in the given choices is to deploy application on runtime and control planes that are both within the jurisdiction.

NEW QUESTION # 133

What is a key performance indicator (KPI) that measures the success of a typical C4E that is immediately apparent in responses from the Anypoint Platform APIs?

- A. The number of API specifications in RAML or OAS format published to Anypoint Exchange
- B. The fraction of API implementations deployed manually relative to those deployed using a CI/CD tool
- C. The number of API implementations that have a publicly accessible HTTP endpoint and are being managed by Anypoint Platform
- D. The number of production outage incidents reported in the last 24 hours

Answer: A

Explanation:

Correct Answer: The number of API specifications in RAML or OAS format published to Anypoint Exchange

>> The success of C4E always depends on their contribution to the number of reusable assets that they have helped to build and publish to Anypoint Exchange.

>> It is NOT due to any factors w.r.t # of outages, Manual vs CI/CD deployments or Publicly accessible HTTP endpoints

>> Anypoint Platform APIs helps us to quickly run and get the number of published RAML/OAS assets to Anypoint Exchange. This clearly depicts how successful a C4E team is based on number of returned assets in the response.

NEW QUESTION # 134

What CANNOT be effectively enforced using an API policy in Anypoint Platform?

- A. Backend system overloading
- B. Logging HTTP requests and responses
- C. Maintaining tamper-proof credentials between APIs
- D. Guarding against Denial of Service attacks

Answer: D

Explanation:

Correct Answer: Guarding against Denial of Service attacks

- >> Backend system overloading can be handled by enforcing "Spike Control Policy"
- >> Logging HTTP requests and responses can be done by enforcing "Message Logging Policy"
- >> Credentials can be tamper-proofed using "Security" and "Compliance" Policies However, unfortunately, there is no proper way currently on Anypoint Platform to guard against DOS attacks.

NEW QUESTION # 135

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

- A. The assignment of each HTTP request to a particular CloudHub worker
- B. The logging configuration that enables log entries to be visible in Runtime Manager
- C. The number of DNS entries allocated to the API implementation
- **D. The SSL certificates used by the API implementation to expose HTTPS endpoints**

Answer: D

Explanation:

Correct Answer: The SSL certificates used by the API implementation to expose HTTPS endpoints

- >> The assignment of each HTTP request to a particular CloudHub worker is taken care by Anypoint Platform itself. We need not manage it explicitly in the API implementation and in fact we CANNOT manage it in the API implementation.
- >> The logging configuration that enables log entries to be visible in Runtime Manager is ALWAYS managed in the API implementation and NOT just for SLB. So this is not something we do EXCLUSIVELY when using SLB.
- >> We DO NOT manage the number of DNS entries allocated to the API implementation inside the code. Anypoint Platform takes care of this.

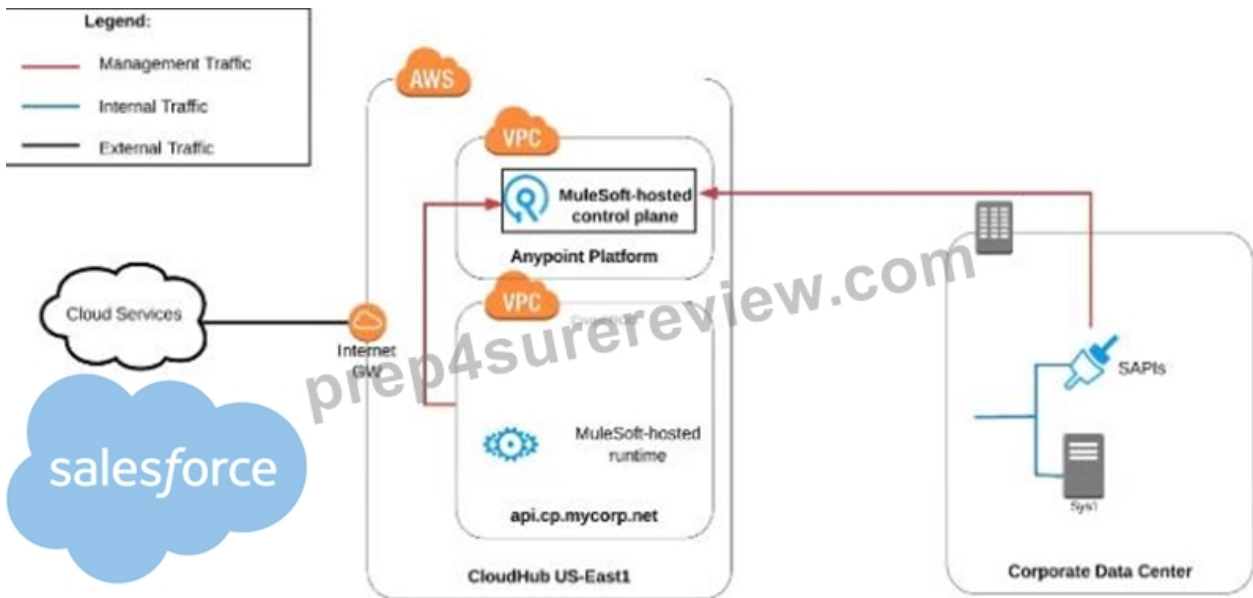

It is the SSL certificates used by the API implementation to expose HTTPS endpoints that is to be managed EXCLUSIVELY by the API implementation. Anypoint Platform does NOT do this when using SLBs.

NEW QUESTION # 136

An organization uses various cloud-based SaaS systems and multiple on-premises systems. The on-premises systems are an important part of the organization's application network and can only be accessed from within the organization's intranet.

What is the best way to configure and use Anypoint Platform to support integrations with both the cloud-based SaaS systems and on-premises systems?

- A) Use CloudHub-deployed Mule runtimes in an Anypoint VPC managed by Anypoint Platform Private Cloud Edition control plane
- B) Use CloudHub-deployed Mule runtimes in the shared worker cloud managed by the MuleSoft-hosted Anypoint Platform control plane
- C) Use an on-premises installation of Mule runtimes that are completely isolated with NO external network access, managed by the Anypoint Platform Private Cloud Edition control plane
- D) Use a combination of Cloud Hub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Anypoint Platform control plane

- A. Option C
- **B. Option B**
- C. Option A
- D. Option D

Answer: B

Explanation:

Correct Answer: Use a combination of CloudHub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Platform control plane.

Key details to be taken from the given scenario:

>> Organization uses BOTH cloud-based and on-premises systems

>> On-premises systems can only be accessed from within the organization's intranet Let us evaluate the given choices based on above key details:

>> CloudHub-deployed Mule runtimes can ONLY be controlled using MuleSoft-hosted control plane. We CANNOT use Private Cloud Edition's control plane to control CloudHub Mule Runtimes. So, option suggesting this is INVALID

>> Using CloudHub-deployed Mule runtimes in the shared worker cloud managed by the MuleSoft-hosted Anyoint Platform is completely IRRELEVANT to given scenario and silly choice. So, option suggesting this is INVALID

>> Using an on-premises installation of Mule runtimes that are completely isolated with NO external network access, managed by the Anyoint Platform Private Cloud Edition control plane would work for On-premises integrations. However, with NO external access, integrations cannot be done to SaaS-based apps. Moreover CloudHub-hosted apps are best-fit for integrating with SaaS-based applications. So, option suggesting this is BEST WAY.

The best way to configure and use Anyoint Platform to support these mixed/hybrid integrations is to use a combination of CloudHub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Platform control plane.

NEW QUESTION # 137

.....

Our Mule-Arch-201 exam cram is famous for instant access to download, and you can receive the downloading link and password within ten minutes, so that you can start your practice as early as possible. Furthermore, Mule-Arch-201 exam dump are high-quality, since we have experienced professionals to edit and verify them. We offer you free demo for you to have a try before buying Mule-Arch-201 Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can enjoy free update for one year for Mule-Arch-201 exam dumps, and the update version for Mule-Arch-201 exam dumps will be sent to your email automatically.
