Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.
Topic 2	<ul style="list-style-type: none">• Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 3	<ul style="list-style-type: none">• Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q179-Q184):

NEW QUESTION # 179

Which item accurately describes a security weakness that is caused by implementing a "ports first" data security solution in a traditional data center?

- A. You may have to use port numbers greater than 1024 for your business-critical applications.
- B. You may not be able to open up enough ports for your business-critical applications which will increase the attack surface area.
- C. You may have to open up multiple ports and these ports could also be used to gain unauthorized entry into your datacenter.
- D. You may not be able to assign the correct port to your business-critical applications.

Answer: C

Explanation:

A "ports first" data security solution is a traditional approach that relies on port numbers to identify and filter network traffic. This approach has several limitations and security weaknesses, such as:

* Port numbers are not reliable indicators of the type or content of network traffic, as they can be easily spoofed or changed by malicious actors.

* Port numbers do not provide any visibility into the application layer, where most of the attacks occur.

* Port numbers do not account for the dynamic and complex nature of modern applications, which often use multiple ports or protocols to communicate.

* Port numbers do not support granular and flexible policies based on user identity, device context, or application behavior. One of the security weaknesses that is caused by implementing a "ports first" data security solution in a traditional data center is that you may have to open up multiple ports and these ports could also be used to gain unauthorized entry into your datacenter. For example, if you have a web server that runs on port 80, you may have to open up port 80 on your firewall to allow incoming traffic. However, this also means that any other service or application that uses port 80 can also access your datacenter, potentially exposing it to attacks. Moreover, opening up multiple ports increases the attack surface area of your network, as it creates more entry points for attackers to exploit.

NEW QUESTION # 180

In addition to local analysis, what can send unknown files to WildFire for discovery and deeper analysis to rapidly detect potentially unknown malware?

- A. Cortex XDR
- B. Cortex XSOAR
- C. MineMild
- D. AutoFocus

Answer: A

Explanation:

In addition to local analysis, Cortex XDR can send unknown files to WildFire for discovery and deeper analysis to rapidly detect.

NEW QUESTION # 181

Which tool supercharges security operations center (SOC) efficiency with the world's most comprehensive operating platform for enterprise security?

- A. Cortex XDR
- B. WildFire
- C. Cortex XSOAR
- D. Prisma SAAS

Answer: C

Explanation:

Cortex XSOAR enhances Security Operations Center (SOC) efficiency with the world's most comprehensive operating platform for enterprise security. Cortex XSOAR unifies case management, automation, real-time collaboration, and native threat intel management in the industry's first extended security orchestration, automation, and response (SOAR) offering.

NEW QUESTION # 182

What are three benefits of SD-WAN infrastructure? (Choose three.)

- A. Improving performance of SaaS applications by requiring all traffic to be back-hauled through the corporate headquarters network
- B. Improving performance by allowing efficient access to cloud-based resources without requiring back- haul traffic to a centralized location
- C. Leveraging remote site routing technical support by relying on MPLS
- D. Promoting simplicity through the utilization of a centralized management structure
- E. Utilizing zero-touch provisioning for automated deployments

Answer: B,D,E

Explanation:

Simplicity: Because each device is centrally managed, with routing based on application policies, WAN managers can create and update security rules in real time as network requirements change. Also, when SD- WAN is combined with zero-touch provisioning, a feature that helps automate the deployment and configuration processes, organizations can further reduce the complexity, resources, and operating expenses required to spin up new sites. # Improved performance: By allowing efficient access to cloud-based resources without the need to backhaul traffic to centralized locations, organizations can provide a better user experience.

NEW QUESTION # 183

Which security tool provides policy enforcement for mobile users and remote networks?

- A. Prisma Access
- B. Service connection
- C. Prisma Cloud
- D. Digital experience management

Answer: A

Explanation:

Prisma Access is a cloud-delivered security platform that provides policy enforcement, secure access, and threat prevention for mobile users and remote networks, ensuring consistent security regardless of location.
