It is incontrovertible high quality and high accuracy Integration-Architect practice materials that have helped more than 98 percent of exam candidates who choose our Integration-Architect real quiz gets the certificate successfully. So we totally understand your inmost thoughts, and the desire to win the Integration-Architect Exam as well as look forward to bright future that come along. During your practice process accompanied by our Integration-Architect study guide, you will easily get the certificate you want.

Salesforce Integration-Architect Certification is highly valued by employers as it demonstrates that the candidate has the skills and knowledge required to design and implement complex integrations within the Salesforce ecosystem. It is also a great way for professionals to advance their careers in the field of Salesforce integration, as it demonstrates their expertise and commitment to the industry.

## Pass Guaranteed Quiz Integration-Architect - High Hit-Rate Salesforce Certified Integration Architect Reliable Test Notes

Currently Salesforce products are important for enterprises information solutions, relative job opportunities are increasing more and more. Integration-Architect latest dumps vce will be useful. IT skills are regarded as an important standard for enterprises. No matter which field you work in, IT staff must keep on learning to keep up with the changes. Integration-Architect Latest Dumps vce will be a shortcut for Salesforce certification and valid for your examinations.

Salesforce is a leading CRM platform that is widely used by businesses of all sizes to manage their customer relationships. As companies increasingly rely on Salesforce to manage their sales, marketing, and customer service operations, the need for skilled professionals who can integrate Salesforce with other systems has grown significantly. The Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is designed to validate the skills and knowledge of professionals who specialize in integrating Salesforce with other systems.

Salesforce Integration-Architect Certification Exam is a challenging certification that requires a solid understanding of Salesforce integration concepts and hands-on experience with integration projects. Salesforce Certified Integration Architect certification is highly respected in the industry and can open up new career opportunities and increase your earning potential. If you are a Salesforce professional looking to advance your career in integration, the Salesforce Integration-Architect Certification Exam is a great way to demonstrate your expertise and stand out in the job market.

## Salesforce Certified Integration Architect Sample Questions (Q59-Q64):

### NEW QUESTION # 59

When a user clicks "Check Preferences" as part of a Lightning flow, preferences from an externally hosted RESTful service are to be checked in real time. The service has OpenAPI 2.0 definitions. Which integration pattern and mechanism should be selected?

- A. Data Virtualization: Salesforce Connect maps external REST data in external objects.
- **B. Request and Reply: Enhanced External Services invokes a REST API.**
- C. Remote Call-In: Salesforce REST API with REST Composite Resources.

**Answer: B**

Explanation:

This scenario describes a classic Request and Reply pattern where a user action in the UI requires an immediate, synchronous response from an external system to determine the next step in a business process (the Flow).

The requirement specifies that an OpenAPI 2.0 (Swagger) definition is available. For an Integration Architect, this is a prime use case for External Services. External Services allow you to import an OpenAPI schema and automatically generate "Invocable Actions" that can be used directly in Flow Builder without writing a single line of Apex code.

Why this is the best fit:

- \* Low Code: It fulfills the requirement purely through declarative configuration, which reduces maintenance and development costs.
- \* Real-Time: It performs a synchronous HTTP callout and waits for the Boolean/String values to be returned to the Flow variables.
- \* Type Safety: Because it uses the OpenAPI definition, Salesforce understands the data types (Boolean /String) natively.

Option A (Data Virtualization) is more suitable for viewing and searching large external datasets as if they were records; it is over-engineered for a simple "check status" function. Option C (Remote Call-In) is the inverse of the requirement; it refers to an external system calling into Salesforce. By using Enhanced External Services, the architect provides a scalable, declarative solution that perfectly aligns with modern Salesforce development best practices for real-time external system interaction.

#### NEW QUESTION # 60

Universal Containers (UC) is a leading provider of management training globally, UC requested students course registration data generated from the Salesforce student community to be synced with the learning management system (LMS). Any update to the course registration data needs to be reflected in the LMS.

Which integration mechanism should be used to meet the requirement?

- A. Outbound Message
- **B. Change Data Capture (CDC)**
- C. Platform Event
- D. Streaming API

**Answer: B**

Explanation:

Change Data Capture (CDC) is the best option to meet the requirement. CDC is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations.

By subscribing to CDC events for the course registration data, the LMS can receive real-time updates and sync with Salesforce.

Streaming API is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query. However, Streaming API has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources.

Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe. Outbound Message is a workflow action that sends SOAP messages with field values to designated endpoints.

Outbound Message is not suitable for this requirement because it does not support complex data types, such as sObjects or collections.

#### NEW QUESTION # 61

A company in a heavily regulated industry requires data in legacy systems to be displayed in Salesforce user interfaces (UIs). They are proficient in their cloud-based ETL (extract, transform, load) tools. They expose APIs built on their on-premise middleware to cloud and on-premise applications.

Which two findings about their current state will allow copies of legacy data in Salesforce?

Choose 2 answers

- **A. Cloud-based ETL can access Salesforce and supports queues.**
- B. Only on-premise systems are allowed access to legacy systems.
- C. Legacy systems can use queues for on-premise integration.
- **D. On-premise middleware provides APIs to legacy systems data.**

**Answer: A,D**

Explanation:

Explanation

Option B is a correct finding, because it means that the company can use their cloud-based ETL tools to extract data from the legacy systems via the APIs exposed by the on-premise middleware, transform the data as needed, and load the data into Salesforce using queues. Queues are a way of managing asynchronous operations, such as bulk data loading, by placing them in a queue and executing them when resources are available<sup>1</sup>.

Option C is also a correct finding, because it means that the company can expose their legacy data to the cloud via their on-premise middleware APIs. APIs are a way of enabling communication and data exchange between different systems using standard protocols and formats<sup>2</sup>. By providing APIs to access their legacy data, the company can use any cloud-based tool or application that can consume those APIs to retrieve and manipulate the data.

Option A is not a correct finding, because it means that the company cannot access their legacy data from the cloud, which prevents them from using their cloud-based ETL tools or any other cloud-based integration solution. If only on-premise systems are allowed to access the legacy systems, then the company would need to use an on-premise integration tool or application to copy the data to Salesforce.

Option D is not a correct finding, because it does not affect the ability to copy legacy data in Salesforce.

Queues are useful for on-premise integration, but they are not necessary for copying data to Salesforce. The company can use other methods, such as direct API calls or batch processes, to load data into Salesforce without using queues.

#### NEW QUESTION # 62

Universal Containers (UC) is a leading provider of management training globally, UC requested students course registration data generated from the Salesforce student community to be synced with the learning management system (LMS). Any update to the course registration data needs to be reflected in the LMS.

Which integration mechanism should be used to meet the requirement?

- A. Outbound Message
- **B. Streaming API**
- C. Platform Event
- D. Change Data Capture (CDC)

**Answer: B**

#### NEW QUESTION # 63

A call center manager uses a custom dashboard to track Case related metrics. The manager wants a component to display the number of closed Cases in real time.

What type of event should be used to meet this requirement?

- A. Generic Event
- **B. Push Topic Event**
- C. Platform Event
- D. Change Data Capture Event

**Answer: B**

Explanation:
