

100% Pass 2026 ISACA AAISM: Latest ISACA Advanced in AI Security Management (AAISM) Exam Exam Simulator

2026 Latest BraindumpsPrep AAISM PDF Dumps and AAISM Exam Engine Free Share: <https://drive.google.com/open?id=11Cw8pmaympzhgO5NqCxTEGty1qq6hRN2>

The ISACA AAISM certification exam is one of the top-rated and valuable credentials in the ISACA world. This ISACA AAISM exam questions is designed to validate the candidate's skills and knowledge. With ISACA Advanced in AI Security Management (AAISM) Exam exam dumps everyone can upgrade their expertise and knowledge level. By doing this the successful AAISM Exam candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period.

ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.
Topic 2	<ul style="list-style-type: none">AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.
Topic 3	<ul style="list-style-type: none">AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.

Latest AAISM Test Objectives - AAISM Practice Exams Free

You may know that we are so popular for the passing rate of our AAISM guide quiz is very high. Generally speaking, 98 % - 99 % of the users can successfully pass the AAISM exam, obtaining the corresponding certificate. In addition, the content of our AAISM Exam Materials is easy to learn and suitable for the public. No matter what your previous learning level is, there will be no problem of understanding.

ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q185-Q190):

NEW QUESTION # 185

Which area of intellectual property law presents the GREATEST challenge in determining copyright protection for AI-generated content?

- A. Determining the rightful ownership of AI-generated creations
- B. Enforcing trademark rights associated with AI systems
- C. Establishing licensing frameworks for AI-generated works
- D. Protecting trade secrets in AI technologies

Answer: A

Explanation:

AAISM governance content highlights that the greatest intellectual property challenge in the context of AI-generated works is determining rightful ownership. Traditional copyright law requires human authorship, but AI-generated creations blur authorship and ownership boundaries, raising legal uncertainty about who can claim rights. Trademark enforcement, trade secret protection, and licensing frameworks are established areas of IP law but do not present the same fundamental challenge as ownership attribution. For AI-generated content, the central legal dilemma is ownership of the creation.

NEW QUESTION # 186

An organization utilizes AI-enabled mapping software to plan routes for delivery drivers. A driver following the AI route drives the wrong way down a one-way street, despite numerous signs. Which of the following biases does this scenario demonstrate?

- A. Confirmation
- B. Automation
- C. Selection
- D. Reporting

Answer: B

Explanation:

AAISM defines automation bias as the tendency of individuals to over-rely on AI-generated outputs even when contradictory real-world evidence is available. In this scenario, the driver ignores traffic signs and follows the AI's instructions, showing blind reliance on automation. Selection bias relates to data sampling, reporting bias refers to misrepresentation of results, and confirmation bias involves interpreting information to fit pre-existing beliefs. The most accurate description is automation bias.

NEW QUESTION # 187

The PRIMARY reason to conduct a privacy impact assessment (PIA) on an AI system is to:

- A. Determine whether personal data is poisoned

- B. Identify applicable regulations
- **C. Analyze how personal data is handled**
- D. Build customer confidence

Answer: C

Explanation:

According to AAISM privacy governance guidance, the primary reason for conducting a PIA is to analyze how personal data is collected, processed, shared, and retained by an AI system. This analysis ensures compliance with privacy laws, mitigates risks to individuals, and informs necessary safeguards. Identifying regulations is part of compliance but is secondary to analyzing actual data handling. Building customer confidence is an outcome, not the main purpose. Checking for poisoned data relates to data quality, not privacy assessment. The fundamental purpose of a PIA is therefore to analyze the handling of personal data.

NEW QUESTION # 188

Which of the following BEST describes an adversarial attack on an AI model?

- A. Reverse engineering the AI model using social engineering techniques
- B. Conducting denial-of-service (DoS) attacks against AI APIs
- **C. Providing inputs that mislead the AI model into incorrect predictions**
- D. Attacking the underlying hardware of the AI system

Answer: C

Explanation:

In AAISM, an adversarial attack is defined by maliciously crafted inputs designed to cause erroneous model behavior (misclassification, targeted misprediction) while the model architecture and parameters remain unchanged. Hardware compromise (A) and DoS (D) are system-level attacks, not adversarial ML per se. Social engineering to obtain model information (C) is an information-gathering or security breach vector, distinct from input-space adversarial manipulation.

NEW QUESTION # 189

A large financial services organization is integrating a third-party AI solution into its critical fraud detection system. Which of the following is the BEST way for the organization to reduce risk associated with AI vendor and supply chain dependencies?

- **A. Establishing contractual agreements requiring vendors to provide evidence of secure development practices**
- B. Focusing on performance testing to ensure the solution meets operational requirements
- C. Implementing isolated virtual environments to validate the integration of the fraud detection system with the solution
- D. Conducting annual vulnerability assessments of the fraud detection system after integration

Answer: A

Explanation:

AAISM emphasizes supplier assurance through contractual obligations as the foundational control for AI supply chain risk. Contracts should require verifiable evidence of secure development practices (e.g., secure SDLC, model and data provenance documentation, SBOM/MBOM where applicable, vulnerability disclosure, patch SLAs, audit rights, incident notification, and regulatory compliance assertions). This creates enforceable, continuous assurance beyond point-in-time tests.

* A is necessary but reactive and limited to your environment.

* B addresses performance, not supply chain security.

* D is a good isolation/validation practice but does not create vendor accountability across the lifecycle.

NEW QUESTION # 190

.....

The internet is transforming society, and distance is no longer an obstacle. You can download our AAISM exam simulation from our official website, which is a professional platform providing the most professional AAISM practice materials. You can get them within 15 minutes without waiting. What is more, you may think these high quality AAISM Preparation materials require a huge investment on them. Actually we eliminate the barriers blocking you from our AAISM practice materials. The price of our AAISM exam question is quite favourable for you to buy.
