

DA0-001 Latest Test Format | DA0-001 Latest Dumps Ebook

2026 Latest BraindumpsIT DA0-001 PDF Dumps and DA0-001 Exam Engine Free Share: <https://drive.google.com/open?id=1iuXeVy6USgPuCqkRS3OF6LrFDZWsXKLQ>

our DA0-001 study materials will also save your time and energy in well-targeted learning as we are going to make everything done in order that you can stay focused in learning our DA0-001 study materials without worries behind. We are so honored and pleased to be able to read our detailed introduction and we will try our best to enable you a better understanding of our DA0-001 Study Materials better.

The experts of our company are checking whether our DA0-001 test quiz is updated or not every day. We can guarantee that our DA0-001 exam torrent will keep pace with the digitized world by the updating system. We will try our best to help our customers get the latest information about study materials. If you are willing to buy our DA0-001 Exam Torrent, there is no doubt that you can have the right to enjoy the updating system. More importantly, the updating system is free for you. Once our CompTIA Data+ Certification Exam exam dumps are updated, you will receive the newest information of our DA0-001 test quiz in time.

CompTIA DA0-001 Latest Dumps Ebook | DA0-001 Latest Learning Materials

The CompTIA DA0-001 exam material is getting updated on a daily basis according to the real CompTIA DA0-001 exam questions so that the students don't face any issues while preparing themselves for the CompTIA Data+ Certification Exam (DA0-001) certification exam and pass it with ease. We guarantee our customers that they will pass DA0-001 exam on the first try with our given DA0-001 exam material.

CompTIA Data+ Certification Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

An analyst for a small business with multiple locations is using each location's quarterly sales reports from last year to create a single revenue report for the year. Which of the following data mining techniques should the analyst use to complete this task?

- A. Data append
- B. Data merge
- C. Data imputation
- D. Data blending

Answer: B

Explanation:

Comprehensive and Detailed In-Depth

To compile a comprehensive annual revenue report from multiple quarterly sales reports, the analyst should integrate the datasets appropriately:

Data Merge: This technique involves combining datasets based on common fields or keys. In this scenario, merging would align data from different quarters based on shared attributes, such as location identifiers, to create a unified dataset.

Data Append: Appending adds datasets sequentially, stacking them on top of each other. While this could combine the reports, it doesn't ensure integration based on common fields, which is necessary for accurate analysis.

Data Blending: Blending combines data from different sources or formats. If the quarterly reports are in varied formats or from different systems, blending would be appropriate. However, if they share the same structure, blending isn't necessary.

Data Imputation: Imputation addresses missing or incomplete data by filling in gaps. This technique isn't relevant to combining complete quarterly reports.

Therefore, merging the data ensures that all quarterly reports are integrated based on common fields, providing a cohesive annual revenue report.

NEW QUESTION # 15

An organization wants to evaluate whether project activities are within the set projections and in line to meet the desired project targets. Which of the following types of analysis is best suited for this situation?

- A. Exploratory analysis
- **B. Performance analysis**
- C. Trend analysis
- D. Descriptive analysis

Answer: B

Explanation:

Comprehensive and Detailed In-Depth

Performance analysis is used to assess whether activities, projects, or processes are meeting predefined goals. It compares actual performance against benchmarks or expectations.

Option A (Trend analysis): Incorrect. Trend analysis looks at data over time to identify patterns or movements, but it does not measure progress against goals.

Option B (Performance analysis): Correct. This type of analysis is specifically used to evaluate progress against projections and targets.

Option C (Descriptive analysis): Incorrect. Descriptive analysis summarizes historical data but does not evaluate whether targets are being met.

Option D (Exploratory analysis): Incorrect. Exploratory analysis is used to discover patterns and anomalies rather than to track progress against predefined objectives.

NEW QUESTION # 16

A data architect is designing a data solution for a retail clothing store chain. Each store has a database that tracks sales transactions. The data architect needs to create a summary table that will be used for a senior executive dashboard. The summary table should not contain duplicate store information. Which of the following should the data architect create?

- A. A foreign key
- **B. A unique constraint**
- C. A primary key
- D. A check constraint

Answer: B

Explanation:

A unique constraint ensures that no duplicate values exist in a specified column of a table. This is essential for creating summary tables where each store should only appear once in the dataset.

NEW QUESTION # 17

A data analyst has been asked to derive a new variable labeled "Promotion_flag" based on the total quantity sold by each salesperson. Given the table below:

Store_ID	Item	Salesperson	Quantity_sold	Promotion_flag
104	Pax-2	James	1,000,300	
204	Pax-3	Paul	234,578	
304	Pax-1	Peter	2,000,432	
404	Pax-2	Esther	1,089,678	
204	Pax-3	May	126,578	
304	Pax-1	Park	200,432	
404	Pax-2	Mabel	1,089,000	

Which of the following functions would the analyst consider appropriate to flag "Yes" for every salesperson who has a number above 1,000,000 in the Quantity_sold column?

- A. Date
- **B. Logical**
- C. Aggregate
- D. Mathematical

Answer: B

Explanation:

A logical function is a type of function that returns a value based on a condition or a set of conditions. For example, the IF function in Excel can be used to check if a certain condition is met, and then return one value if true, and another value if false. In this case, the data analyst can use a logical function to check if the Quantity_sold column is greater than 1,000,000, and then return "Yes" if true, and "No" if false. This would create a new variable called Promotion_flag that indicates whether the salesperson has sold more than 1,000,000 units or not. NEW QUESTION # 18

A data analyst needs to create a data visualization that aids in un the cumulative impact of sequentially introduced values that are positive or negative. Which of the following data visualization methods should the analyst use?

- A. A scatter plot
- **B. A waterfall chart**
- C. A bubble chart
- D. A line chart

Answer: B

Explanation:

A waterfall chart is a type of data visualization that shows the cumulative impact of sequentially introduced values that are positive or negative. A waterfall chart typically has an initial value and a final value, with intermediate values shown as floating columns that either add to or subtract from the initial value. A waterfall chart can help visualize how different factors contribute to a net change in a value over time. Therefore, the correct answer is B.
