The payment method we use is credit card payment, not only can we guarantee your security of the payment, but also we can protect your right and interests. As for the safety issue of Platform-App-Builder Exam Materials you are concerned about is completely unnecessary. You can rest assured to buy and use it.

Salesforce Certified Platform App Builder Sample Questions (Q198-Q203):

NEW QUESTION # 198

Universal Containers has several new fields they've requested for the Opportunity Product object. What should an app builder be able to configure using a formula field?

- A. A Rich Text area field that uses HTML to bold certain characters.
- **B. A combination of the Opportunity's Text and a Description fields.**
- C. A hyperlink to the parent Account of the parent Opportunity.
- D. A mix of functions and concatenation of 10 Account fields and 10 Opportunity fields.

Answer: B

Explanation:

Formula fields in Salesforce can use various functions including text, mathematical, and logical functions to create simple or complex expressions. They can handle data from fields of the same record. Option C, "A combination of the Opportunity's Text and a Description fields," is a valid configuration for a formula field as it involves simple concatenation of text fields, which is supported. Options A, B, and D exceed the capabilities of formula fields:

A: Hyperlinks to other objects using formula fields do not directly support navigation to parent records of a different object.

B: Rich Text and HTML formatting are not supported in formula fields.

D: Formula fields have limits in their complexity and field references which would make mixing numerous fields from different related objects impractical and likely exceed formula size limits.

NEW QUESTION # 199

The director of marketing has asked the app builder to create a formula field that tracks how many days have elapsed since a contact was sent a marketing communication. The director is only interested in whole units. Which function should be used to calculate the difference?

- A. Datevalue()
- B. Date()
- **C. Today()**
- D. Now()

Answer: C

NEW QUESTION # 200

What should be done to provide managers access to records of which they are not the owner in a private sharing model?

- A. Create a Manager profile and select the "View My Teams Data" option.
- **B. Create a Manager Permission set and select the "View All Data" option**
- C. Define a Role Hierarchy and use the Grant Access Using Hierarchies option
- D. Set the Manager field for each User Record on the Manager's team.

Answer: B

NEW QUESTION # 201

What is the process to upgrade an unmanaged package that is currently installed in production?

- **A. Click the update link on the Installed Packages page.**
- B. Use the Install Wizard to install the upgrade to production.
- C. Install the new version to a Developer org then deploy to production.
- D. Uninstall the current version and install the new version.

Answer: A

Explanation:

The correct method to upgrade an unmanaged package that is installed in a production environment is to use the update link provided on the Installed Packages page. This process ensures that any modifications or additions in the package are properly integrated without the need to uninstall the previous version, thus preserving existing customizations and data.
