If you are worry about the coming CWAP-405 study materials, our study materials will help you solve your problem. In order to promise the high quality of our CWAP-405 study materials, our company has outstanding technical staff, and has perfect service system after sale. More importantly, our good CWAP-405 guide questions and perfect after sale service are approbated by our local and international customers. If you want to pass your practice exam, we believe that our learning engine will be your indispensable choices. More and more people have bought our CWAP-405 Guide questions in the past years.

In the Desktop CWAP-405 practice exam software version of CWNP CWAP-405 practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the Certified Wireless Analysis Professional (CWAP-405) practice exam which is totally free. Certified Wireless Analysis Professional (CWAP-405) practice test is very customizable and you can adjust its time and number of questions.

Visual CWAP-405 Cert Exam – High Pass-Rate Valid Exam Forum for CWAP-405: Certified Wireless Analysis Professional

CWAP-405 study guide provides free trial services, so that you can gain some information about our study contents, topics and how to make full use of the software before purchasing. It's a good way for you to choose what kind of CWAP-405 training prep is suitable and make the right choice to avoid unnecessary waste. Our purchase process is of the safety and stability if you have any trouble in the purchasing CWAP-405 practice materials or trail process, you can contact us immediately.

CWNP Certified Wireless Analysis Professional Sample Questions (Q69-Q74):

NEW QUESTION # 69

How does a VoIP Phone, using WMM Power Save, request data frames buffered at the AP?

- A. The VoIP phone transmits a PS-Poll frame
- B. The VoIP phone transmits a WMM Action frame
- C. The VoIP phone sets the More Data bit in the MAC Header to 1
- D. The VoIP phone transmits a trigger frame, which is a QoS Null frame or a QoS Data frame

Answer: D

Explanation:
A VoIP phone, using WMM Power Save, requests data frames buffered at the AP by transmitting a trigger frame, which is a QoS Null frame or a QoS Data frame. WMM Power Save is a power saving mode that allows a STA (station) to conserve battery power by periodically sleeping and waking up. WMM Power Save is based on WMM (Wi-Fi Multimedia), which is a QoS (Quality of Service) enhancement that provides prioritized and differentiated access to the medium for different types of traffic. When a STA sleeps, it cannot receive any data frames from the AP, so it informs the AP of its power save status by setting a bit in its MAC header. The AP then buffers any data frames destined for the sleeping STA until it wakes up. When a STA wakes up, it sends a trigger frame to the AP, indicating its AC (Access Category), which is a logical queue that corresponds to its QoS level. A trigger frame can be either a QoS Null frame or a QoS Data frame, depending on whether it has any payload or not. The AP then responds with one or more data frames from the same AC as the trigger frame, followed by an ACK or BA (Block Acknowledgement) frame from the STA.
The other options are not correct, as they are not used by a VoIP phone using WMM Power Save to request data frames buffered at the AP. A PS-Poll (Power Save Poll) frame is used by a STA using legacy power save mode, not WMM Power Save mode, to request data frames buffered at the AP. A PS-Poll frame does not indicate any AC or QoS information. Setting the More Data bit in the MAC header to 1 does not request any data frames from the AP, but indicates that there are more data frames to be sent by the STA or received by the STA. Transmitting a WMM Action frame does not request any data frames from the AP, but performs various management actions related to WMM features, such as admission control, parameter update, etc. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 7: QoS Analysis, page
198-199

NEW QUESTION # 70

Which piece of information is not transmitted in an HT PPDU header?

- A. PPDU length
- B. MCS index
- C. Number of Spatial Streams
- D. Channel number

Answer: D

Explanation:
The channel number is not transmitted in an HT PPDU header. An HT PPDU header is a part of the PPDU that contains information such as modulation, coding, data rate, and number of spatial streams for an 802.11n transmission. The channel number is not included in the HT PPDU header, as it is determined by the frequency band and channel width that are used by the transmitter and receiver. The channel number can be inferred from the frequency band and channel width, which are indicated by bits in different fields of the HT PPDU header, such as HT-SIG and HT-LTF. The other options are not correct, as they are transmitted in an HT PPDU header. The number of spatial streams, PPDU length, and MCS index are indicated by bits in the HT-SIG field of the HT PPDU header. References: [Wireless Analysis Professional Study Guide CWAP-
405], Chapter 4: 802.11 Physical Layer, page 108-109

NEW QUESTION # 71

In a Spectrum Analyzer the Swept Spectrogram plot displays what information?

- A. The RF time domain
- B. Reductions in frame transmissions
- C. RF power present at a particular frequency over the course of time
- D. Wi-Fi Device information

Answer: C

Explanation:
The Swept Spectrogram plot is a spectrum analysis plot that shows the RF power present at a particular frequency over the course of time. It can help identify trends and patterns in the RF spectrum over a longer period of time. It can also show how the RF environment changes over time and how different sources of RF signals affect each other. The other options are not correct, as they describe different types of plots or information that are not related to the Swept Spectrogram plot. References: [Wireless Analysis Professional Study Guide], Chapter 3: Spectrum Analysis, page 72-73

NEW QUESTION # 72
You are troubleshooting throughput problems for a WLAN cell. The cell is provisioned with an 802.11ac dual- band AP. Users connected with both 5 GHz and 2.4 GHz connections are reporting performance problems.
The AP settings are properly optimized. No interface issues have been detected (either co-channel interference or non-Wi-Fi interference) and the number of associated users is low.
What should you analyze to resolve the issue?

- A. the Ethernet uplink and the network infrastructure
- B. The 2.4 GHz radio configuration
- C. The 5 GHz radio configuration
- D. The antennas used on the client devices

Answer: A

NEW QUESTION # 73
You are concerned about attackers gaining access to your WLAN from outside the facility.
Why does reducing the output power on the APs not provide sufficient certainty that an attacker outside the facility cannot gain access?

- A. Because the attacker will simplify use a lower gain antenna and a radio with higher receive sensitivity
- B. Because the attacker can increase the output power of the radio on the client
- C. Because RF signals can be received even when weak if using a Mac OS X computer
- D. Because the attacker can simply use high gain antennas

Answer: D

NEW QUESTION # 74
......

To stay updated and competitive in the market you have to upgrade your skills and knowledge level. Fortunately, with the Certified Wireless Analysis Professional (CWAP-405) certification exam you can do this job easily and quickly. To do this you just need to pass the CWAP-405 certification exam. The Certified Wireless Analysis Professional (CWAP-405) certification exam is the top-rated and career advancement CWNP CWAP-405 Certification in the market. This CWNP certification is a valuable credential that is designed to validate your expertise all over the world. After successfully competition of CWAP-405 exam you can gain several personal and professional benefits.
