## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Which Activate phase is tied to performing configurations in your SAP Ariba Strategic Sourcing suite solution?

- A. Configure
- B. Deploy
- C. Setup
- D. Realize

**Answer: D**

### NEW QUESTION # 30

A Migration is performed for a Greenfield deployment to production, and the status of the Template configuration type indicates that it Failed. What actions do you take to make the failed template(s) available in production?

- A. The template must always be rebuilt in production
- B. Request SAP intervention
- C. Import the template in production
- D. Import the missing data in production and then import the template in production

**Answer: D**

### NEW QUESTION # 31

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Push
- B. Migrate
- C. Move
- D. Deploy

**Answer: D**

Explanation:

The Deploy phase is when final cutover activities take place, including migrating configurations and master data to production, running final system tests, and performing the go-live. The other options are not standard SAP Activate phases for Ariba.

### NEW QUESTION # 32

During which SAP Activate Methodology phase do you define the customer requirements?

- A. Discover
- B. Explore
- C. Define
- D. Design

**Answer: B**

### NEW QUESTION # 33

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. User with Partner Administrator can configure translation.
- B. Contact an SAP Deployment lead for customization help.
- C. Create a package to migrate translations by ICM.
- D. Translations are included in migrations and are listed as AMLStringResource in the migration UI.

**Answer: D**

Explanation:

In Greenfield deployments, translations for custom field labels, help tips, and validation/error messages are migrated as part of the configuration migration package and are represented in the migration UI as AMLStringResource entries. This structured approach ensures all language-specific content is consistently moved alongside configuration settings.

While administrators and deployment leads may support translation tasks, the migration of translation strings is managed automatically via this AML-based mechanism, not through manual reconfiguration or separate ICM packages.

This ensures a seamless multilingual user experience immediately upon go-live without requiring additional manual translation imports.

## NEW QUESTION # 34

.....
