

# Latest Associate-Cloud-Engineer Mock Test, Associate-Cloud-Engineer New Braindumps Questions

P.S. Free & New Associate-Cloud-Engineer dumps are available on Google Drive shared by PrepAwayExam  
<https://drive.google.com/open?id=1h32RnFl0OiAN6m49JN65hBxZz05OAVZD>

We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our Associate-Cloud-Engineer actual exam is. In order to let you have a general idea about the shining points of our Associate-Cloud-Engineer training materials, I would like to introduce the free demos of our Associate-Cloud-Engineer study engine for you. There are the real and sample questions in the free demos to show you that how valid and latest our Associate-Cloud-Engineer learning dumps are. So just try now!

Different with other similar education platforms on the internet, the Google Associate Cloud Engineer Exam guide torrent has a high hit rate, in the past, according to data from the students' learning to use the Associate-Cloud-Engineer test torrent, 99% of these students can pass the qualification test and acquire the qualification of their yearning, this powerfully shows that the information provided by the Associate-Cloud-Engineer study tool suit every key points perfectly, targeted training students a series of patterns and problem solving related routines, and let students answer up to similar topic. It may say, the Associate-Cloud-Engineer Test Torrent can let users in a short time, accurately grasp the proposition trend of each year, doing all effects in the process of the difficulties in the hot, user's weak link and targeted training, and exercise the user's solving problem ability, eventually achieve the objectives of the pass Google Associate Cloud Engineer Exam qualification test.

## Associate-Cloud-Engineer New Braindumps Questions, Exam Associate-Cloud-Engineer Outline

Do some fresh things each day that moves you out of your comfort zone. If you stay cozy every day, you will gradually become lazy. Now, you have the opportunity to change your current conditions. Our Associate-Cloud-Engineer real exam dumps are specially prepared for you. Try our Associate-Cloud-Engineer study tool and absorb new knowledge. After a period of learning, you will find that you are making progress. The knowledge you have studied on our Associate-Cloud-Engineer Exam Question will enrich your life and make you wise. Our Associate-Cloud-Engineer real exam dumps are manufactured carefully, which could endure the test of practice. Stable and healthy development is our long lasting pursuit. In order to avoid fake products, we strongly advise you to purchase our Associate-Cloud-Engineer exam question on our official website.

## Google Associate Cloud Engineer Exam Sample Questions (Q69-Q74):

### NEW QUESTION # 69

You are about to start working on a micro-service deployment project using Google Kubernetes Engine service. The client needs everything on Google and want you to maintain both frontend and backend code on Google Cloud as well. Which service best suites this case?

- A. Google Container Registry
- B. GitHub

- C. Cloud Source Repository
- D. Cloud Storage

**Answer: C**

#### NEW QUESTION # 70

You have a developer laptop with the Cloud SDK installed on Ubuntu. The Cloud SDK was installed from the Google Cloud Ubuntu package repository. You want to test your application locally on your laptop with Cloud Datastore. What should you do?

- A. Create a Cloud Datastore index using gcloud datastore indexes create.
- B. Install the google-cloud-sdk-datastore-emulator component using the apt get install command.
- C. Export Cloud Datastore data using gcloud datastore export.
- D. **Install the cloud-datastore-emulator component using the gcloud components install command.**

**Answer: D**

Explanation:

\* The Datastore emulator provides local emulation of the production Datastore environment. You can use the emulator to develop and test your application locallyRef: <https://cloud.google.com/datastore/docs/tools/datastore-emulator>

#### NEW QUESTION # 71

You want to configure autohealing for network load balancing for a group of Compute Engine instances that run in multiple zones, using the fewest possible steps. You need to configure re-creation of VMs if they are unresponsive after 3 attempts of 10 seconds each. What should you do?

- A. Create a managed instance group. Verify that the autoscaling setting is on.
- B. **Create a managed instance group. Set the Autohealing health check to healthy (HTTP).**
- C. Create an HTTP load balancer with a backend configuration that references an existing instance group. Define a balancing mode and set the maximum RPS to 10.
- D. Create an HTTP load balancer with a backend configuration that references an existing instance group. Set the health check to healthy (HTTP).

**Answer: B**

Explanation:

<https://cloud.google.com/compute/docs/instance-groups>

<https://cloud.google.com/load-balancing/docs/network/transition-to-backend-services#console>

\* In order to enable auto-healing, you need to group the instances into a managed instance group.

Managed instance groups (MIGs) maintain the high availability of your applications by proactively keeping your virtual machine (VM) instances available. An auto-healing policy on the MIG relies on an

\* application-based health check to verify that an application is responding as expected. If the auto-healer determines that an application isn't responding, the managed instance group automatically recreates that instance.

It is important to use separate health checks for load balancing and for auto-healing. Health checks for load balancing can and should be more aggressive because these health checks determine whether an instance receives user traffic. You want to catch non-responsive instances quickly, so you can redirect traffic if necessary. In contrast, health checking for auto-healing causes Compute Engine to proactively replace failing instances, so this health check should be more conservative than a load balancing health check.

#### NEW QUESTION # 72

Your company has a single sign-on (SSO) identity provider that supports Security Assertion Markup Language (SAML) integration with service providers. Your company has users in Cloud Identity. You would like users to authenticate using your company's SSO provider. What should you do?

- A. In Cloud Identity, set up SSO with Google as an identity provider to access custom SAML apps.
- B. Obtain OAuth 2.0 credentials, configure the user consent screen, and set up OAuth 2.0 for Web Server Applications.
- C. **Obtain OAuth 2.0 credentials, configure the user consent screen, and set up OAuth 2.0 for Mobile & Desktop Apps.**
- D. In Cloud Identity, set up SSO with a third-party identity provider with Google as a service provider.

**Answer: C**

**NEW QUESTION # 73**

You are creating a Kubernetes Engine cluster to deploy multiple pods inside the cluster. All container logs must be stored in BigQuery for later analysis. You want to follow Google- recommended practices. Which two approaches can you take?

- A. Turn on Stackdriver Monitoring during the Kubernetes Engine cluster creation.
- B. Develop a custom add-on that uses Cloud Logging API and BigQuery API. Deploy the add-on to your Kubernetes Engine cluster.
- C. Use the Stackdriver Logging export feature to create a sink to Cloud Storage. Create a Cloud Dataflow job that imports log files from Cloud Storage to BigQuery.
- D. Turn on Stackdriver Logging during the Kubernetes Engine cluster creation.
- E. Use the Stackdriver Logging export feature to create a sink to BigQuery. Specify a filter expression to export log records related to your Kubernetes Engine cluster only.

**Answer: D,E**

Explanation:

A Is correct because creating a cluster with Stackdriver Logging option will enable all the container logs to be stored in Stackdriver Logging.

B Is not correct because creating a cluster with Stackdriver Monitoring option will enable monitoring metrics to be gathered, but it has nothing to do with logging.

C is not correct, because even if you can develop a Kubernetes addon that will send logs to BigQuery, this is not a Google- recommended practice.

D is incorrect because this is not a Google recommended practice.

E Is correct because Stackdriver Logging support exporting logs to BigQuery by creating sinks (see links below).

<https://cloud.google.com/kubernetes-engine/docs/how-to/logging>

[https://cloud.google.com/logging/docs/export/configure\\_export\\_v2](https://cloud.google.com/logging/docs/export/configure_export_v2)
