We have experienced education technicians and stable first-hand information to provide you with high quality & efficient AZ-800 training dumps. If you are still worried about your exam, our exam dumps may be your good choice. Our AZ-800 training dumps cover nearly 85% real test materials so that if you master our dumps questions and answers you can clear exams successfully. Don't worry over trifles. If you purchase our AZ-800 training dumps you can spend your time on more significant work.

The objective of the PDFVCE is to give you quick access to Administering Windows Server Hybrid Core Infrastructure (AZ-800) actual questions. Offering Administering Windows Server Hybrid Core Infrastructure (AZ-800) updated dumps is the only factor behind the dominance of PDFVCE in the market. Our customers will see our Administering Windows Server Hybrid Core Infrastructure (AZ-800) questions in the final certification test. We have a devoted team who puts in a lot of effort to keep the AZ-800 dumps updated. PDFVCE informs you that the Administering Windows Server Hybrid Core Infrastructure (AZ-800) questions regularly change the content of the real exam.

100% Pass Marvelous Microsoft Brain AZ-800 Exam

PDFVCE Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam questions are consistently updated to make sure they are according to the Microsoft latest exam syllabus. If you choose PDFVCE, you can be sure that you'll always get the updated and real AZ-800 exam questions, which are essential to go through the AZ-800 test in one go. In addition, we also offer up to 1 year of free Microsoft AZ-800 certification exam question updates. These free updates ensure that candidates get access to the latest Microsoft exam questions even after they have made their initial purchase.

Microsoft AZ-800 Exam Syllabus Topics:

Topic	Details
Deploy and manage Active Directory Domain Services (AD DS) in onpremises and cloud environments (30-35%)	
Deploy and manage AD DS domain controllers	- deploy and manage domain controllers on-premises - deploy and manage domain controllers in Azure - deploy Read-Only Domain Controllers (RODCs) - troubleshoot flexible single master operations (FSMO) roles
Configure and manage multi-site, multi-domain, and multi-forest environments	- configure and manage forest and domain trusts - configure and manage AD DS sites - configure and manage AD DS replication

Create and manage AD DS security principals	- create and manage AD DS users and groups - manage users and groups in multi-domain and multi-forest scenarios - implement group managed service accounts (gMSAs) - join Windows Servers to AD DS, Azure AD DS, and Azure AD
Implement and manage hybrid identities	- implement Azure AD Connect - manage Azure AD Connect Synchronization - implement Azure AD Connect cloud sync - integrate Azure AD, AD DS, and Azure AD DS - manage Azure AD DS - manage Azure AD Connect Health - manage authentication in on-premises and hybrid environments - configure and manage AD DS passwords
Manage Windows Server by using domain-based Group Policies	- implement Group Policy in AD DS - implement Group Policy Preferences in AD DS - implement Group Policy in Azure AD DS
Manage Windows Servers and workloads in a hybrid environment (10-15%)	
Manage Windows Servers in a hybrid environment	- deploy a Windows Admin Center gateway server - configure a target machine for Windows Admin Center - configure PowerShell Remoting - configure CredSSP or Kerberos delegation for second hop remoting - configure JEA for PowerShell Remoting
Manage Windows Servers and workloads by using Azure services	- manage Windows Servers by using Azure Arc - assign Azure Policy Guest Configuration - deploy Azure services using Azure Virtual Machine extensions on non-Azure machines - manage updates for Windows machines - integrate Windows Servers with Log Analytics - integrate Windows Servers with Azure Security Center - manage IaaS virtual machines (VMs) in Azure that run Windows Server - implement Azure Automation for hybrid workloads - create runbooks to automate tasks on target VMs - implement DSC to prevent configuration drift in IaaS machines
Manage virtual machines and containers (15-20%)	
Manage Hyper-V and guest virtual machines	- enable VM enhanced session mode - manage VM using PowerShell Remoting, PowerShell Direct, and HVC.exe - configure nested virtualization - configure VM memory - configure Integration Services - configure Discrete Device Assignment - configure VM Resource Groups - configure VM CPU Groups - configure hypervisor scheduling types - manage VM Checkpoints - implement high availability for virtual machines - manage VHD and VHDX files - configure Hyper-V network adapter - configure NIC teaming - configure Hyper-V switch

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q96-Q101):

NEW QUESTION # 96

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

You need to configure resources based constrained delegation so that the users in contoso.com can use Windows Admin Center on Server2 to connect to Server1. How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 97

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1 and the servers shown in the following table.

You need to ensure that User1 can manage only Scope1 and Scope3. What should you do?

- A. Implement Windows Admin Center and add connections to Server1 and Server2.
- B. Add User1 to the DHCP Administrators domain local group.
- **C. Implement IP Address Management (IPAM).**
- D. Add User1 to the DHCP Administrators group on Server1 and Server2.

Answer: C

NEW QUESTION # 98

Your network contains an Active Directory Domain Services (AD DS) domain named adatum.com. The domain contains a server named Server1 and the users shown in the following table.

Server1 contains a folder named D:\Folder1. The advanced security settings for Folder1 are configured as shown in the Permissions exhibit. (Click the Permissions tab.)

Folder1 is shared by using the following configurations

Answer:

Explanation:

NEW QUESTION # 99

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes if the statement is true.

Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:
