Microsoft MS-721최신버전 인기 덤프자료, MS-721최신 덤프샘플문제 다룬

목표가 있다면 목표를 향해 끊임없이 달려야 멋진 인생이 됩니다. 지금의 현황에 만족하여 아무런 노력도 하지 않는다면 언젠가는 치열한 경쟁을 이겨내지 못하게 될것입니다. IT업종에 종사중이시라면 다른분들이 모두 취득하는 자격증쯤은 마련해야 되지 않겠습니까? Microsoft인증 MS-721시험은 요즘 가장 인기있는 자격증 시험의 한과목입니다. IT업계에서 살아남으려면ExamPassdump에서Microsoft인증 MS-721덤프를 마련하여 자격증에 도전하여 자기의 자리를 찾아보세요.

최신 Microsoft 365 Certified MS-721 무료샘플문제 (Q23-Q28):

질문 # 23

You have a Teams Phone deployment that contains offices in Brisbane and Melbourne.
You deploy a new Session Border Controller (SBC) named SBC2 to the Brisbane office.
You need to ensure that emergency calls from only the users in the Brisbane office use SBC2.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. Assign an emergency calling policy to the Brisbane office users.
- B. Create a new dial plan.
- C. Assign an emergency call routing policy to the Brisbane office users.
- D. Create a new emergency call routing policy.

- E. Create a new emergency calling policy.
- F. Assign a dial plan to the Brisbane office users.

정답: C,D

질문 # 24

You need to implement Local Media Optimization.

- A. 10.10.0.0/24 and 10.11.0.0/24
- B. 52.112.0.0/14 and 52.120.0.0/14
- C. 8.8.8.8/32 and 4.4.2.2/32
- D. 132.245.0.0/16 and 40.104.0.0/15

정답: B

설명:

질문 # 25

Your company has offices throughout the United States.

The company is opening a new office in Scranton. The office will occupy two floors in the same building.

You need to ensure that if an emergency call is placed, the local emergency dispatchers know from which floor the call came.

How should you complete the PowerShell script? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

질문 # 26

You have a Microsoft Teams Phone deployment that uses Direct Routing.

You connect a new Session Border Controller (SBC).

You need to verify that all the voice features work as expected for calls that traverse the SBC. What should you use?

- A. Microsoft Teams Network Assessment Tool
- B. the SIP Tester client script
- C. Microsoft Remote Connectivity Analyzer
- D. Microsoft 365 network connectivity test tool

정답: A

질문 # 27

Case Study 1 - Litware, Inc

Overview

Litware, Inc. is an online retailer.

Litware is replacing its telephony platform with Microsoft Teams Phone.

Currently, all users are assigned Microsoft 365 E3 licenses.

Existing Environment

Telephony Environment

The existing telecommunications system has several third-party IP-PBXes at the corporate and warehouse sites. Currently, the PBXes are linked through the corporate WAN and an inter-office dial plan is in place.

A unique PSTN direct inward dial (DID) is assigned to each user. The last five digits of each DID are used as an extension. Litware piloted Microsoft Skype for Business Server Enterprise Voice, but has since decided to migrate directly to Teams Phone. During the pilot, a response group was created, and the response group is still in use. Agents in the response group use Skype for Business Server- certified handsets.

Locations

Litware has global retail stores and datacenters.

The telephony topology contains the following four types of sites:

Corporate sites

The corporate sites contain information workers who collaborate by using the Teams desktop client and SharePoint Online.

The reception desk at each corporate site has an analog intercom with an integrated door control.

Each intercom connects to an existing PBX by using an FXS Analog Telephony Adapter (ATA).

SIP trunks are delivered directly to the site by using a resilient WAN that connects directly to the on-site PBX solution.

Warehouse sites

The warehouse sites are critical to the business. Users at these sites use either the Teams desktop client or the Teams mobile client.

Each warehouse has a public announcement (PA) system that connects to the PBX by using a SIP ATA, along with the sites' existing ISDN trunks.

Currently, users at the company's warehouse in Georgia can call the PA system by dialing 123456.

All calls to emergency services from the warehouses are played over the warehouses' PA system automatically.

WAN connectivity at the warehouses can be unreliable, so local PSTN connectivity is preferred as compared to centrally hosted connectivity.

Retail sites

Each retail site has only one or two desk phones and a specialized point of sale (POS) computer that cannot run the desktop or web versions of the Teams client.

Users at the retail sites have the Teams app and an associated data plan installed on their mobile device.

Currently, each retail uses a managed SD-WAN appliance to connect to both the internet and the corporate WAN.

The users report that in the event of an internet outage at the retail sites, they can use their mobile devices, which have strong reception.

Requirements

Planned Changes

Litware plans to implement the following changes:

- * Maintain the existing emergency call PA integration.
- * Replace the existing IP-PBX solutions by using Teams Phone.
- * Consolidate all its PSTN trunks by using region-specific datacenters, whenever possible. During the planned deployment of Teams Phone, Litware will open a new retail site in the United Kingdom that will have five users. Litware does not have any existing telephony in the United Kingdom. Management at the new retail site wants to use Microsoft Teams Calling Plans for the users. You are opening a new warehouse site in Melbourne. The new warehouse will connect to a phone carrier by using a Session Border Controller (SBC). Dialing rules are an area code of two digits beginning with a zero followed by a subscriber number of eight digits. For example, an E.164 number of +61370105550 will be translated to 03 7010 5550 and +61255505550 will be translated to 02 5550 5550.

Technical Requirements

Litware identifies the following technical requirements:

- * Minimize the amount of voice traffic over the WAN.
- * Whenever possible, use natively supported Teams solutions.
- * Avoid replacing existing analog device adapters and SIP phones.
- * Assign a Microsoft 365 Phone System license to all the users listed in a CSV file.
- * Ensure that the retail sites can place and receive calls in the event of a WAN failure.
- * Assign a phone number of +61370105550 to a user named User1. User1 is located at a corporate site.
- * Ensure that the warehouse sites maintain calling in the event of an internet outage or Teams service failure.
- * Provide users at the United Kingdom retail site with phone numbers. The users must only be allowed to make in-country calls.
- * Replace the response group from the Skype for Business Server Voice Enterprise pilot with a call queue. The agents must be able to use their existing handset.

You need to connect the analog intercoms to Teams Phone.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a trusted application endpoint for Teams.
- B. Enable Direct Routing to a Teams-certified SBC.
- C. Register the ATAs with a Teams-certified SBC.
- D. Create a configuration profile for IP phones.

- E. Create a resource account for each intercom.

정답: B,C
