Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q64-Q69):

NEW QUESTION # 64
What can be found in the /proc/ directory?

- A. One log file per running service.
- B. One device file per hardware device.
- C. One directory per running process.
- D. One file per existing user account.
- E. One directory per installed program.

Answer: C

NEW QUESTION # 65
Which of the following statements are true regarding a typical shell script? (Choose two.)

- A. It is located in /usr/local/scripts/.
- B. It is compiled into a binary file compatible with the current machine architecture.
- C. It starts with the two character sequence #!.
- D. It has the executable permission bit set.
- E. It is located in /etc/bash/scripts/.

Answer: B,D

NEW QUESTION # 66
What are the differences between a private web browser window and a regular web browser window? (Choose three.)

- A. Private web browser windows do not keep records in the browser history.
- B. Private web browser windows do not store cookies persistently.
- C. Private web browser windows do not allow printing or storing websites.
- D. Private web browser windows do not support logins into websites.
- E. Private web browser windows do not send regular stored cookies.

Answer: A,B,E

Explanation:
A private web browser window is a mode of browsing that prevents the browser from saving your browsing history, cookies, and other site data, or information entered in forms. However, it does not prevent websites, your employer or school, or your internet service provider from tracking your online activity. The main differences between a private web browser window and a regular web browser window are:
Private web browser windows do not store cookies persistently. Cookies are small files that websites use to store information on your device, such as your preferences, login status, or tracking data. In a regular web browser window, cookies are stored until they expire or you delete them. In a private web browser window, cookies are deleted when you close all private windows.
Private web browser windows do not keep records in the browser history. The browser history is a list of web pages that you have visited in the past. In a regular web browser window, the browser history is saved and can be accessed by anyone who uses the same device or profile. In a private web browser window, the browser history is not saved and cannot be viewed by anyone.
Private web browser windows do not send regular stored cookies. When you visit a website in a regular web browser window, the browser sends any cookies that are stored for that website. This allows the website to recognize you and provide personalized

content or services. When you visit a website in a private web browser window, the browser does not send any cookies that are stored in regular windows. This prevents the website from identifying you or linking your activity across different sessions.

NEW QUESTION # 67
Which of the following tasks can the command passwd accomplish? (Choose two.)

- A. Lock a user account.
- B. Change a user's password.
- C. Create a new user account.
- D. Create a new user group.
- E. Change a user's username.

Answer: A,B

Explanation:
Explanation
The passwd command in Linux is used to change the password of a user account. A normal user can run passwd to change their own password, and a system administrator (the superuser) can use passwd to change another user's password, or define how that account's password can be used or changed1. The passwd command can also be used to lock or unlock a user account. Locking a user account means disabling the user's ability to log in to the system, while unlocking a user account means restoring the user's ability to log in. To lock a user account, the passwd command can be used with the -l option, followed by the username. To unlock a user account, the passwd command can be used with the -u option, followed by the username12. The passwd command cannot be used to change a user's username, create a new user account, or create a new user group. These tasks require different commands, such as usermod, useradd, orgroupadd345. NEW QUESTION # 68
Which of the following commands shows the absolute path to the current working directory?

- A. who
- B. cd ~/home
- C. cd ..
- D. pwd
- E. ls -l

Answer: D

Explanation:
The command pwd stands for "print working directory". It will print the absolute path of the current working directory to the terminal. For example, if we are currently in the /home/user/directory, it will print out that exact path1. The pwd command is useful for finding out where we are in the file system hierarchy and for verifying the location of files and directories2.
The other options are not commands that show the absolute path to the current working directory. The who command shows the users who are currently logged in to the system3. The cd ... command changes the current working directory to the parent directory of the current one2. The ls -l command lists the files and directories in the current working directory in a long format, which shows the permissions, ownership, size, date, and name of each file and directory2. The cd ~/home command changes the current working directory to the /home directory under the user's home directory, which may or may not exist2. Reference:
