Alcatel-Lucent 4A0-100 VCE dumps - Testking 4A0-100 test

Our product for the 4A0-100 exam is compiled by the skilled professionals who have studied the exam for years, therefore the quality of the practice materials are quite high, it will help you to pass the exam with ease. Free update for the latest version within one year are available. And the questions and answers of the 4A0-100 Exam are from the real exam, and the answers are also verified by the experts, and money back guarantee. The payment of the 4A0-100 exam is also safe for our customers, we apply online payment with credit card, it can ensure the account safety of our customers.

To pass the Alcatel-Lucent Scalable IP Networks exam, candidates must demonstrate a deep understanding of IP networking concepts and technologies, as well as their ability to apply this knowledge to real-world scenarios. They must also possess strong analytical and problem-solving skills, as well as good communication skills. Candidates who successfully pass the exam will receive the Alcatel-Lucent Scalable IP Networks certification, which is recognized by major companies and organizations worldwide.

Alcatel-Lucent Nokia IP Networks and Services Fundamentals Sample Questions (Q345-Q350):

NEW QUESTION # 345

From a customer's perspective, how does a VPRN service operate?

- A. All sites are connected to a routed network.
- B. All sites are connected to the Internet.
- C. All sites are connected to a single wire.
- D. All sites are connected to a switched network.

Answer: A

NEW QUESTION # 346

Why is the address field in a PPP header always set to "11111111"?

- A. PPP supports multipoint access networks with many stations. The all 1's acts as a multicast.
- B. PPP supports point-to-point networks only. The address field is fixed.
- C. PPP supports point-to-point networks only. The address field can change dynamically since every station is assigned a PPP address.
- D. PPP supports multipoint access networks with many stations. The all 1's acts as a broadcast.

Answer: B

NEW QUESTION # 347

Which of the following is typically a characteristic of Layer 2 framing?

- A. All the above.
- B. Provides a universal addressing scheme to uniquely identify destinations in the network.
- C. Provides error checking of the frame contents after transmission.
- D. The size of the Layer 2 frame cannot exceed 1518 bytes.

Answer: C

NEW QUESTION # 348

TCP is sending data in 5 segments with SEQ numbers 27000, 27500, 28000, 28500, and 29000 respectively. During transmission, the segment with SEQ=28500 is dropped in the network. How does TCP handle this situation?

- A. The receiving end station sends an ACK flag with SEQ=28000 to indicate it has received a segment out of order.
- B. The receiving station sends a NACK frame with SEQ=28500 requesting that the frame be retransmitted
- C. Once the receiver's window is full, TCP assembles the payload and determines that SEQ=28500 is missing. At this point, the receiver sends the RST flag with SEQ=28500 to Request Single Transmission of the missing segment.
- D. TCP will collect the segments and forward them to the application layer where the SEQ numbers will be processed and a retransmit request will occur for the entire packet.

Answer: A

NEW QUESTION # 349

Which of the following mediums can be used in a VPWS when defining SAPs (Select three)?

- A. Token Ring.
- B. ATM.
- C. Ethernet.
- D. Frame Relay.

Answer: B,C,D

NEW QUESTION # 350
