## Certification Mule-Dev-301 Dump - Mule-Dev-301 Updated CBT

As you know, many exam and tests depend on the skills rather than knowledge solely. Our Mule-Dev-301 exam materials are time-tested materials for your information. There are free demos of our Mule-Dev-301 training guide for your reference with brief catalogue and outlines in them. For a Mule-Dev-301 study engine develop to full maturity, it is rewarding and hard. And we have engaged for more than ten years and successfully make every detail of our Mule-Dev-301 practice braindumps to be perfect.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q43-Q48):

**NEW QUESTION # 43**
Which type of cache invalidation does the Cache scope support without having to write any additional code?

- A. Write-through invalidation
- B. White-behind invalidation
- C. Notification-based invalidation
- D. Time to live

**Answer: D**

Explanation:
The Cache scope supports time to live (TTL) as a cache invalidation strategy without having to write any additional code. TTL specifies how long the cached response is valid before it expires and needs to be refreshed. The Cache scope also supports custom invalidation strategies using MEL or DataWeave expressions. Reference: https://docs.mulesoft.com/mule-runtime/4.3/cache-scope#cache_invalidation

**NEW QUESTION # 44**

A Flight Management System publishes gate change notification events whenever a flight's arrival gate changes. Other systems, including Baggage Handler System. Inflight Catering System and Passenger Notifications System, must each asynchronously receive the same gate change notification to process the event according.
Which configuration is required in Anypoint MQ to achieve this publish/subscribe model?

- A. Publish each client subscribe directly to the exchange.
  Have each client subscribe directly to the queue.
- B. Publish the gate change notification to an Anypoint MC queue
  Have each client subscribe directly to the queue
- C. Publish the gate change notification to an Anypoint MQ queue.
  Create different anypoint MQ exchange meant for each of the other subscribing systems Bind the queue with each of the exchanges
- D. Publish the gate change notification to an Anypoint MQ exchanhe.
  Create different Anypoint MQ queues meant for each of the other subscribing systems.Bind the exchange with each of the queues.

**Answer: D**

Explanation:
To achieve a publish/subscribe model using Anypoint MQ, where each system receives the same gate change notification event, the developer should publish the gate change notification to an Anypoint MQ exchange, create different Anypoint MQ queues meant for each of the other subscribing systems, and bind the exchange with each of the queues. An exchange is a message routing agent that can send messages to different queues based on predefined criteria. By binding an exchange with multiple queues, each queue receives a copy of every message sent to that exchange. Therefore, each system can subscribe to its own queue and receive every gate change notification event. Reference: https://docs.mulesoft.com/anypoint-mq/3.x/anypoint-mq-exchanges

**NEW QUESTION # 45**
A Mule application for processing orders must log the order ID for every log message output.
What is a best practice to enrich every log message with the order ID?

- A. Use the Tracing module to set logging variables with a Mapped Diagnostic Context
- B. Create a custom XML SDK component to wrap the logger processor and automatically add the order ID within the connector
- C. Use flow variables within every logger processor to log the order ID
- D. Set a flow variable and edit the log4/2.xml file to output the variable as part of the message pattern
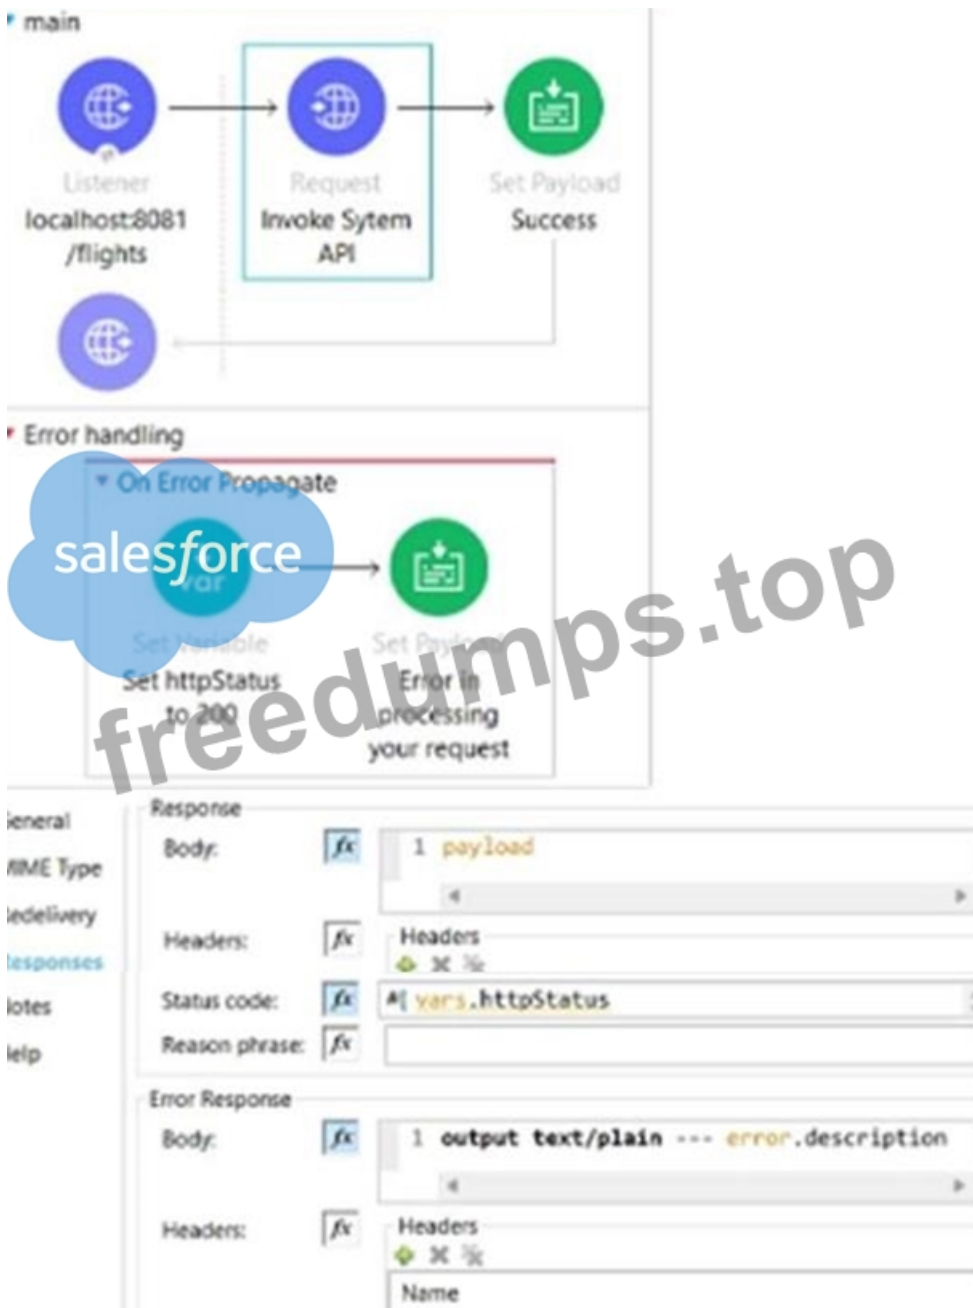

**Answer: A**

Explanation:
To enrich every log message with the order ID, the developer should use the Tracing module to set logging variables with a Mapped Diagnostic Context (MDC). The Tracing module allows adding custom key-value pairs to log messages using MDC variables. The developer can use Set Logging Variables operation to set the order ID as an MDC variable and then use it in any logger processor within the same thread or event. Reference: https://docs.mulesoft.com/tracing-module/1.0/tracing-module-reference#set-logging-variables

**NEW QUESTION # 46**
The HTTP Request operation raises an HTTP CONNECTIVITY error.
Which HTTP status code and body are returned to the web client?

- A. HTTP Status Code:200.
  Body 'Error in processing your request
- B. HTTP Status Code:500.
  Body 'Error in processing your request
- C. HTTP Status Code:500.
  Body 'Error in processing your request
- D. HTTP Status Code:500.
  Body 'The HTTP CONNECTIVITY Error description

**Answer: C**

Explanation:
When the HTTP Request operation raises an HTTP CONNECTIVITY error, it triggers an on-error-continue handler that sets a payload with 'Error in processing your request'. Since no status code is explicitly set in this handler, it defaults to 500 (INTERNAL SERVER ERROR). Therefore, the web client receives an HTTP response with status code 500 and body 'Error in processing your request'. Reference: https://docs.mulesoft.com/mule-runtime/4.3/error-handling#on-error-continue

**NEW QUESTION # 47**

Refer to the exhibit.

```xml
<build>
  <resources>
    <resource>
      <directory>s...</directory>
      <filtering>true</filtering>
    </resource>
  </resources>
  <testResources>
    <testResource>
      <directory>src/test/resources</directory>
      <filtering>true</filtering>
    </testResource>
    <testResource>
      <directory>src/test/funmon</directory>
      <filtering>true</filtering>
      <targetPath>funmon</targetPath>
    </testResource>
  </testResources>
  <pluginManagement>
    <plugins>
      <plugin>
        <groupId>org.apache.maven.plugins</groupId>
        <artifactId>maven-resources-plugin</artifactId>
        <configuration>
          <nonFilteredFileExtensions>
            <nonFilteredFileExtension>p12</nonFilteredFileExtension>
            <nonFilteredFileExtension>crt</nonFilteredFileExtension>
            <nonFilteredFileExtension>pem</nonFilteredFileExtension>
          </nonFilteredFileExtensions>
        </configuration>
      </plugin>
```
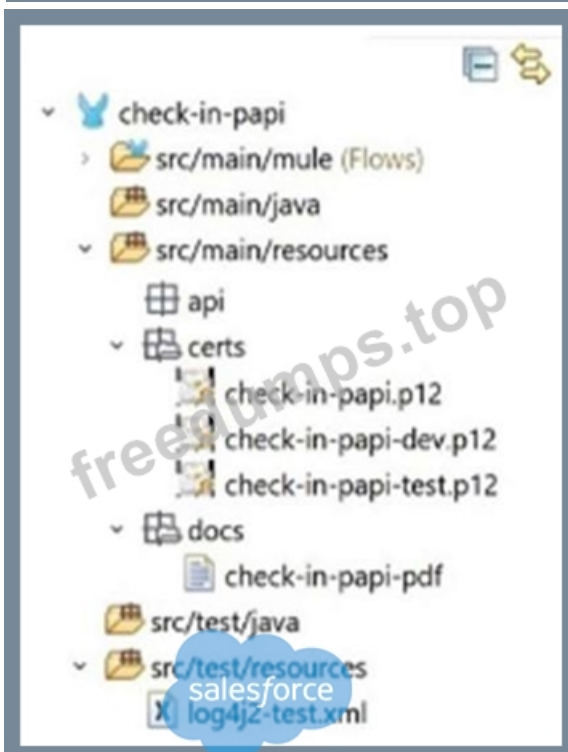

A Mule application pom.xml configures the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory.
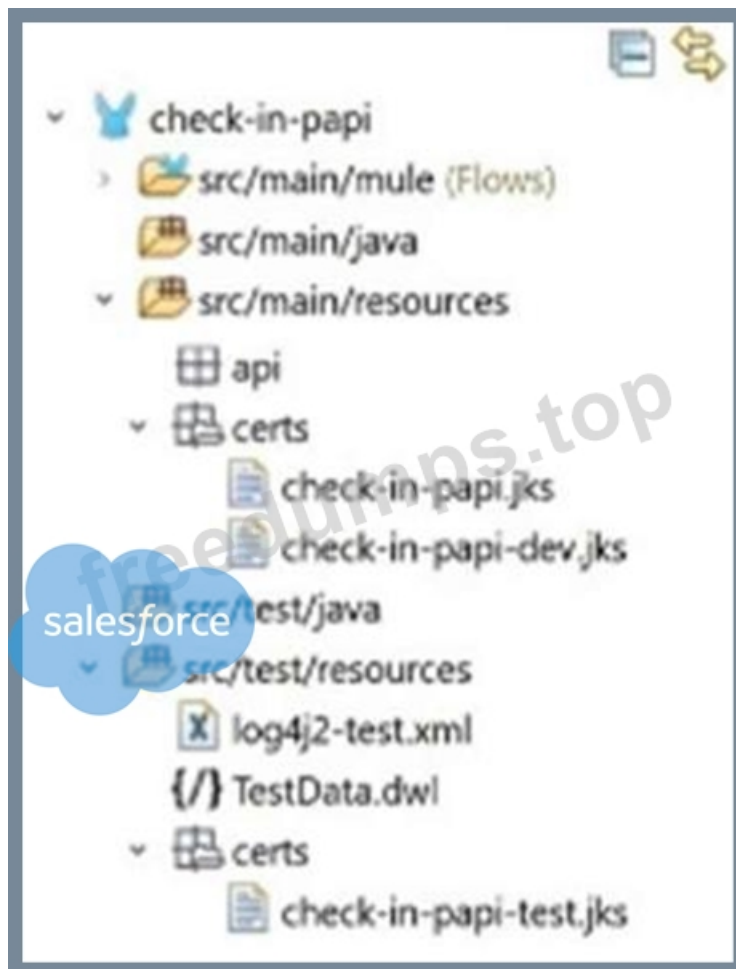

Which configuration of this plugin achieves a successful build?

- A.

- B.

- C.

- D.

**Answer: B**

Explanation:
To configure the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory, option C should be used. This option specifies that any files with .cer or .jks extensions under the certs directory should be excluded from filtering. Filtering is a process of replacing placeholders with actual values in resource files during the build process. Binary files should not be filtered because they may become corrupted or unusable. Reference: https://maven.apache.org/plugins/maven-resources-plugin/examples/filter.html https://maven.apache.org/plugins/maven-resources-plugin/examples/include-exclude.html

......

As we all know, the preparation process for an exam is very laborious and time- consuming. We had to spare time to do other things to prepare for Mule-Dev-301 exam, which delayed a lot of important things. If you happen to be facing this problem, you should choose our Mule-Dev-301 Study Materials. With our study materials, only should you take about 20 - 30 hours to preparation can you attend the exam. The rest of the time you can do anything you want to do to,which can fully reduce your review pressure.
