## EMT Practice Test - Valid EMT Test Pass4sure

With the increasing marketization, the EMT study guide experience marketing has been praised by the consumer market. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the EMT study training materials, so we provide free pre-sale experience to help users to better understand our EMT Exam Questions. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of EMT latest questions to download.

## NREMT Emergency Medical Technicians Exam Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Which of the following elements proves tort negligence in a court of law?

- A. Abandonment

- B. Causation
- C. False imprisonment
- D. Assault and battery

**Answer: B**

#### NEW QUESTION # 28

Which of the following sections are designated by command at an MCI? Select the three correct options.

- A. Logistics
- B. Aviation
- C. Planning
- D. Catering
- E. Finance
- F. Staging

**Answer: A,C,E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Incident Command System (ICS) for Mass Casualty Incidents (MCI), the four major sections are:

\* Planning: Collects data and develops response strategies

\* Logistics: Supplies and personnel

\* Finance/Administration: Cost tracking, contracts, compensation

Staging is a tactical location, not a management section. Catering and aviation are not command-level ICS designations unless part of specific tasks under logistics or operations.

#### NEW QUESTION # 29

A 10-year-old patient is in hypovolemic shock. Which of the following signs would be early indicators of shock for this patient? Select the three correct options.

- A. Capillary refill
- B. Heart rate
- C. Blood pressure
- D. Respiratory rate
- E. SpO<sub>2</sub>
- F. Blood glucose level

**Answer: A,B,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Children compensate for shock through increased heart rate, respiratory rate, and vasoconstriction, which delays blood pressure drop.

Therefore:

\* Tachycardia is often the first sign

\* Prolonged capillary refill (>2 seconds) is an early indicator

\* Tachypnea supports perfusion

Blood pressure is a late sign in pediatric shock. SpO<sub>2</sub> is helpful but does not specifically indicate shock. Blood glucose may be abnormal in other metabolic conditions but is not an early marker of volume loss.

### NEW QUESTION # 30

What characteristics of the pediatric airway are different from the adult airway?

- A. Proportionately smaller tongue and proportionately larger occiput
- B. Proportionately smaller tongue and proportionately smaller occiput
- **C. Proportionately larger tongue and proportionately larger occiput**
- D. Proportionately larger tongue and proportionately smaller occiput

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Compared to adults, pediatric patients have:

\* A proportionately larger tongue, which increases the risk of airway obstruction

\* A larger occiput, which causes natural neck flexion when lying supine, potentially occluding the airway. This anatomical difference is why EMS providers often use a shoulder roll instead of a head tilt to maintain a neutral airway in infants and toddlers.

National EMS Education Standards - Pediatric Assessment and Airway Anatomy

### NEW QUESTION # 31

A 27-year-old patient reports trouble breathing after being struck by a car. Which of the following findings are indicative of a possible chest wall injury? Select the three answer options that are correct.

- **A. Subcutaneous emphysema**
- B. Occipital depression
- C. Jugular vein distention
- **D. Clavicle deformity**
- E. Epigastric distension
- **F. Unequal rise and fall**

**Answer: A,D,F**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Clavicle deformity suggests potential rib or thoracic trauma. Unequal chest rise may indicate a flail segment, pneumothorax, or hemothorax. Subcutaneous emphysema, the presence of air under the skin, is a classic finding in pneumothorax or tracheobronchial injury.

Occipital depression is not chest related; epigastric distension is a GI symptom; and jugular vein distention would suggest tension pneumothorax or cardiac tamponade, which are more advanced complications.
